If the above clarifications are agreed for inclusion in the Conference Report, we will not foreclose on future uses of the Barnwell Facility which the Congress has already directed the Administration to evaluate as part of the Fiscal Year 1978 Appropriation and Authorization Legislation.

With kindest personal regards and best wishes,

Sincerely,

STROM THURMOND.

U.S. SENATE,
Washington, D.C., October 28, 1977.

Hon. STROM THURMOND,
U.S. Senate, Russell Senate Office Building, Washington, D.C.

DEAR STROM: I appreciate the concerns you have expressed in your letter of October 18, 1977 on the subject of S. 897, the Nuclear Nonproliferation Act. I believe those concerns are well-founded and I am glad to accommodate them through colloquy on the floor in accordance with the agreements between our staffs. In particular, on section 104, our colloquy could say that the creation of INFA involves devising feasible and environmentally sound approaches for the siting, development, and management under effective international auspices of facilities for the provisions of nuclear fuel services and the storage of spent nuclear fuel.

Second, in discussing the reevaluation of the nuclear fuel cycle in section 105, our colloquy could say that the reevaluation should consider coprocessing and blending.

Third, our colloquy could also say that in section 202, which deals with the establishment and operation of a program to train people from other countries on safeguards and physical scurity procedures, that the Department of Energy should consider using existing facilities for such a program.

Finally, section 303(b)(3) is certainly not intended to place a reprocessing monopoly in foreign hands and that should certainly be made clear in colloquy on the floor.

I would leave it to our staffs to work out whatever details are needed to put the colloquy together and trust that we are now in agreement on those aspects of the bill in which you expressed concern. If so, in accordance with the statement in the first paragraph of your letter, I hope you will withdraw your current hold on S. 897. With best personal regards,

Sincerely,

JOHN GLENN.

Mr. KENNEDY. Mr. President, I am pleased to be a cosponsor of S. 897, the Nuclear Nonproliferation Act. This landmark legislation represents a comprehensive statement of the conditions under which the United States will engage in peaceful nuclear cooperation. It recognizes the need for more comprehensive and effective international safeguards over nuclear materials that are supplied, as well as the importance of constraints against the transfer of materials and technology which can contribute directly to the spread of nuclear weapons capabilities.

At the same time as more effective controls are established, it is essential to provide more credible assurances of nonsensitive nuclear fuel supply to those consumers who accept our nonproliferation conditions. S. 897 recognizes this by initiating a program for nuclear fuel assurances and by making the nuclear licensing process more efficient and predictable.

Mr. President, in testimony before the Committee on Energy and Natural Resources, Deputy to the Under Secretary of State Joseph S. Nye stated that:

> The Administration considers it a matter of utmost importance that sound non-proliferation legislation be enacted this year.

I congratulate the floor managers and the members of the Governmental Affairs, Foreign Relations, and Energy Committees—for developing this comprehensive approach to nonproliferation policy, which has met with the strong support of the President as well as those advocating effective U.S. initiatives in this critical field.

Mr. BELLMON. Mr. President, the proposal before this body would attempt to reduce the spread of the nuclear arsenal internationally. Apparently the thinking behind this worthy proposal is that action by the United States can effectively halt the proliferation of these horrible weapons.

The time has long since passed when the United States unilaterally controlled the use of the atom. Despite—and perhaps in spite of—which policy President Carter chooses, other nuclear powers will continue to export their nuclear technology. This problem will not be rectified by a passive role on the part of this Nation. The United States must assume an active role.

The export of nuclear technology for research, for medical treatment and for electrical generation is inevitable, but the export of nuclear weapons capability is not inevitable.

With proper controls, sanctions and safeguards, the atom can be destined for peaceful purposes as more of its secrets become known to a more diverse portion of the world. It is necessary for the United States to be in a position to insure those controls, sanctions and safeguards are adequate. This Nation cannot assume that leadership position if she excludes herself from the international community engaged in nuclear commerce.

The Nuclear Nonproliferation Act of 1977 as reported out of committee appears to be designed to take the United States out of international nuclear commerce. A regulatory and licensing maze far more complex than the one now crippling our domestic nuclear power industry would be imposed on nations seeking business with us.

The United States cannot help to shape the international nuclear community's protocol if the Nation is not a member of its commerce. The United States must declare that nonproliferation is an international goal and must act positively in concert with other nuclear supplier nations to develop the necessary controls, sanctions, and safeguards for nuclear commerce.

A number of amendments which have been proposed by the Senators from Idaho, Kansas and New Mexico (Senator MCCLURE, Senator DOLE and Senator DOMENICI) are designed to eliminate the unnecessary regulatory maze. These amendments have been accepted so this bill can then be viewed as the expression of this Nation's desire to actively cooperate in an international effort to limit the spread of nuclear weapons.

As the bill now stands its amended form, it deserves our support. I plan to vote for this proposal because I abhor the growth of the nuclear arsenal around the world.

Mr. MOYNIHAN. Mr. President, it is with some reluctance that I offer a few observations about the nuclear nonproliferation legislation that is before the body. The history of this legislation testifies to its complexity and to its subtlety for, as we know, we have before us the product of three committees which have, in turn, worked closely with many agencies of the executive branch. And together with my other colleagues, I have been impressed by the presentation of those among us who have acquired a mastery of this difficult subject—Senators GLENN, PERCY, RIBICOFF, MCCLURE, CHURCH, and others. I, for one, have profited much from their diligence.

I wish to add only that I have had the opportunity to watch American nonproliferation policy from the "business end." Having served as Ambassador in India and as Permanent Representative to the United Nations, I have from time to time noted that the policy conceived and executed at home may not necessarily produce its intended effects abroad. In the matter on nonproliferation, for example, it happened that the Indian nuclear explosion occurred when I represented this country in New Delhi. If there remains a controversy as to whether the Indian explosion involved a breach of an agreement with the United States, there can be no controversy over the fact that we need less ambiguous, more precise, bilateral arrangements regarding the transfer of U.S. nuclear materials.

Indeed, it is this point which illuminates the important question: What exactly, is the continuing responsibility of the United States in the fate and future use of nuclear materials of U.S. origin? Here again, I would return to my experience with international organizations in general, and raise this question: How much of our responsibility in this can we, with prudence, yield up to any international organization?

I myself feel inclined toward the view that it would be unwise to weaken the capability of U.S. agencies to carry out monitoring functions as they relate to activities overseas. And if the issue is posed so as to ask whether our own regulatory agencies should be poised to

look over the shoulder of the International Atomic Energy Agency, I should respond in the affirmative. I say this not in denigration of the International Atomic Energy Agency, but rather because of one tendency I have observed, namely, the reluctance of this Government to interfere once a problem has fallen to one or another of the international bureaucracies. Whether this reluctance is wholly bureaucratic, or whether it grows out of a lack of conviction, the result is often the same.

It is my impression, further, that the Congress has never intended that the matter of controlling U.S. nuclear materials once they leave our actual control should fall exclusively or even principally to agencies outside our control. But, be this as it may, I should hope that we would not weaken our own capability. Of course, I well understand the need to maintain a reliable and sensible international mechanism for nuclear fuels. And, of course, the position of the United States in that market ought to be protected. But at some point we must choose, and I believe that the weight of the argument rests with those who wish to see the United States pursue a more assertive, less passive policy in these matters.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

Mr. McCLURE. Mr. President, will the Senator yield for 30 seconds?

Mr. GLENN. I yield.

Mr. McCLURE. Mr. President, I do not mean to belabor this, but at the beginning of the debate I made certain comments concerning the staff of the committee, both the majority and the minority. I did not at that time give any credit at all to the minority staff on the Energy Committee. Mr. Chuck Trabandt has been absolutely invaluable at all stages of the proceedings, and I would not want us to close the debate and vote on the measure without saying this for the RECORD.

Mr. GLENN. Mr. President, we are all aware that the staffs have done an outstanding job. It is a complex bill, and the staffs have been outstanding in the work they have done.

Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of H.R. 8638; that the text of S. 897, as amended, be substituted for the text of H.R. 8638; and that the Senate then proceed immediately to final passage of H.R. 8638, as amended by S. 897.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 8638) to provide for more efficient and effective control over the proliferation of nuclear explosive capability.

The PRESIDING OFFICER. Without objection, the Senate will proceed immediately to the consideration of the bill.

Mr. GLENN. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

The PRESIDING OFFICER. The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read a third time, the question is, Shall it pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

(Mr. MATSUNAGA assumed the chair.)

Mr. CRANSTON. I announce that the Senator from Iowa (Mr. CULVER), the Senator from Alaska (Mr. GRAVEL), and the Senator from Indiana (Mr. BAYH) are necessarily absent.

I further announce that the Senator from South Dakota (Mr. ABOUREZK) is absent on official business.

I also announce that the Senator from South Dakota (Mr. McGOVERN) is absent because of illness.

I further announce that, if present and voting, the Senator from Alaska (Mr. GRAVEL), and the Senator from Iowa (Mr. CULVER) would each vote "yea."

Mr. STEVENS. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Nebraska (Mr. CURTIS), the Senator from Oregon (Mr. PACKWOOD), and the Senator from Delaware (Mr. ROTH) are necessarily absent.

I further announce that, if present and voting, the Senator from Tennessee (Mr. BAKER) would vote "yea."

The result was announced—yeas 88, nays 3, as follows:

[Rollcall Vote No. 30 Leg.]

YEAS—88

Allen	Hansen	Morgan
Anderson	Hart	Moynihan
Bartlett	Haskell	Muskie
Bellmon	Hatch	Nelson
Bentsen	Hatfield, Mark O.	Nunn
Biden	Hatfield, Paul G.	Pearson
Brooke	Hathaway	Pell
Bumpers	Hayakawa	Percy
Burdick	Heinz	Proxmire

Goldwater	Metzenbaum	Zorinsky
Griffin		

NAYS—3

Helms	Scott	Thurmond

NOT VOTING—9

Abourezk	Culver	McGovern
Baker	Curtis	Packwood
Bayh	Gravel	Roth

So the bill (H.R. 8638), as amended, was passed.

Mr. GLENN. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. GLENN. Mr. President, I move that the Senate insist on its amendments and ask for a conference on the disagreeing votes of the two Houses, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. SPARKMAN, Mr. PELL, Mr. CHURCH, Mr. RIBICOFF, Mr. GLENN, Mr. MUSKIE, Mr. JACKSON, Mr. CASE, Mr. JAVITS, Mr. PERCY, Mr. MATHIAS, and Mr. McCLURE conferees on the part of the Senate.

Mr. GLENN. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of the Senate amendment to H.R. 8638.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GLENN. Mr. President, I ask unanimous consent that consideration of S. 897 be indefinitely postponed, since we are amending the House bill which we are sending back.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GLENN. Mr. President, I want to state that an agreement was worked out among the sponsors of the legislation, Senator McCLURE, and the chairman of the Energy, Foreign Relations, and Governmental Affairs Committees to the effect that on the conference on this bill the Energy Committee would have two conferees on the conference for consideration of all matter in dispute with the House. This was our agreement even though S. 897 was referred to the Energy Committee for consideration of only a limited number of the bill's provisions. I would like it to appear in the RECORD that as part of this agreement it was understood that the appointment of Energy Committee conferees for consideration of the entire bill would not be considered precedent for Energy Committee jurisdiction over the subject matter of the entire bill or, for that matter, jurisdiction over any subject in the bill not contained in the provisions of the bill which were considered by the Energy Committee under the original referral of S. 897.

Mr. PERCY. Mr. President, if the Senator will yield, I would like to concur with the distinguished Senator on that. We have discussed that with the members of the Energy Committee, and they are in conformity and in support of this position.

Mr. GLENN. That is correct.

I thank the Chair.

Mr. ROBERT C. BYRD. Mr. President, the Senate has taken a major step forward toward a solution of one of the

gravest problems facing us today—the rapidly increasing proliferation of nuclear weaponry. We are all well aware that the uncontrolled spread of nuclear energy may one day lead to an outcome that is too terrible to imagine. At the same time, if peacefully used, nuclear energy offers the possibility of providing an answer to our ever-diminishing supplies of conventional energy sources.

The problem that we, as a nation, face is to insure the opportunity for continued peaceful development of nuclear energy while avoiding the dangers of its misuse.

The Nuclear Non-Proliferation Act of 1978 represents a comprehensive and sound effort to control the proliferation of nuclear weapons while maintaining the United States as a reliable nuclear supplier to other nations. It stands for continued peaceful development of the atom as an alternative energy source.

Mr. President, three Senate committees considered and reported on this major bill. I commend the chairman of those committees, Chairman SPARKMAN of the Foreign Relations Committee, Chairman RIBICOFF of the Governmental Affairs Committee, and Chairman JACKSON of the Energy and Natural Resources Committee for their assistance in facilitating Senate consideration of the measure.

Also I particularly thank the managers of the bill, Senator GLENN and Senator PERCY, who have labored long and diligently to bring it's consideration to a final conclusion.

Many other Members of the Senate contributed to the improvement of the measure we have just passed but I wish to make specific reference to the assistance of Senators MCCLURE and CHURCH. Their contributions were many and of value. The Members of this body have, once again, demonstrated their diligence and their devotion to their duties as evidenced by the passage of this extremely complex and comprehensive bill.

CONFERENCE REPORT ON ENDANGERED WILDERNESS ACT OF 1978

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield? I ask unanimous consent that it be in order at this time to order the yeas and nays on the adoption of the conference report on H.R. 3454.

Mr. STEVENS. Reserving the right to object, Mr. President, is that the Endangered American Wilderness Act of 1978?

Mr. ROBERT C. BYRD. Yes. I would anticipate, may I say to the distinguished Senator from Alaska, that the vote would occur tomorrow at 12 noon, but if we can order the yeas and nays it would save us some time tomorrow.

Mr. STEVENS. I have no objection.

The PRESIDING OFFICER. Is there objection? The Chair hears none and it is so ordered.

Mr. CHURCH. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, will the distinguished Senator from Idaho yield?

Mr. CHURCH. I would be happy to yield.

ORDER FOR VOTE TO OCCUR TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the vote on the conference report which Mr. CHURCH is about to present to the Senate occur tomorrow at the hour of 12 noon or at the conclusion of the orders for the recognition of Senators, whichever is the later.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

ORDER FOR EXECUTIVE SESSION TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the previous order calling for the going into executive session at 12 noon be modified to the extent that immediately after the rollcall vote on the adoption of the conference report, the Senate go into executive session to consider the first treaty.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHURCH. Mr. President, I yield to the distinguished Senator from California.

SENATE RESOLUTION 394—RESOLUTION TO COMMEMORATE THE DIAMOND JUBILEE OF THE COMMONWEALTH CLUB OF CALIFORNIA

Mr. HAYAKAWA. Mr. President, I send a resolution to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated.

The legislative clerk read as follows:

A resolution (S. Res. 394) to commemorate the diamond jubilee of the Commonwealth Club of California.

Mr. ROBERT C. BYRD. Mr. President, since this is a matter not material to this side of the aisle, there is no objection.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the immediate consideration of the resolution.

Mr. HAYAKAWA. Mr. President, this resolution, which is to commemorate the 75th anniversary of the foundation of the Commonwealth Club of California, is cosponsored by the following Senators: Mr. PERCY, Mr. BAKER, Mr. CRANSTON, Mr. LAXALT, Mr. GOLDWATER, Mr. MARK O. HATFIELD, Mr. THURMOND, Mr. DOLE, Mr. CHURCH, Mr. MUSKIE, Mr. KENNEDY, Mr. JAVITS, Mr. STEVENS, and Mr. TOWER. Each of these Senators have spoken at this distinguished forum of opinion in California.

For 75 years, the Commonwealth Club has presented public issues to the people of California, and has organized study groups on special problems and topics of importance, such as crime, education, water problems, and so on. Its influence on public opinion to California and the west coast has been most distinguished.

I have cleared this resolution with the members of the Committee on Rules and Administration, and, as I understand, there is no objection to it. This is, as I say, a resolution commending the Commonwealth Club on its 75th anniversary.

Mr. PERCY. Mr. President, will the Senator yield for a brief comment?

Mr. HAYAKAWA. Yes.

Mr. PERCY. I commend our distinguished colleague on his resolution. I am proud to be a cosponsor of it. I have appeared before the Commonwealth Club a number of times.

There are many distinguished platforms in the State of Illinois, but taking the country as a whole, there are very few as distinguished as the Commonwealth Club of California, and I commend the Senator for paying tribute to them at this time on the floor of the Senate.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution was considered and agreed to.

The preamble was agreed to.

The resolution, with its preamble, is as follows:

Whereas the Commonwealth Club has provided a platform for many distinguished national and international speakers over the last seventy-five years for the purpose of timely and comprehensive debate on major issues;

Whereas the Commonwealth Club affords a variety of study sections to analyze and make recommendations on topics of importance in order to make them available to legislatures and libraries all over the world;

Whereas the membership of the Commonwealth Club comprises 14,000 members throughout the world whose concern for national and international affairs parallels that of its speakers;

Whereas the membership of the Commonwealth Club has made the results of its views and comments widely known to achieve better public understanding of the significant issues of our time: Now, therefore, be it

Resolved That the Senate of the United States commemorate the Commonwealth Club of California on its Diamond Jubilee.

Sec. 2. The Secretary of the Senate is authorized to transmit a copy of this resolution to the Commonwealth Club of California.

Mr. STEVENS. Mr. President, will the Senator yield?

The PRESIDING OFFICER. The Senator from Idaho has the floor.

Mr. STEVENS. If the Senator from Idaho will yield, I am sure the Senator from Idaho and I will be happy to join the Senator from California in celebrating its bicentennial when the time is appropriate.

Mr. CHURCH. Mr. President, has the resolution been acted upon?

The PRESIDING OFFICER. The resolution has been considered and agreed to.

Mr. CHURCH. I now yield to the able Senator from Colorado.

AUTHORIZATION FOR FINANCIAL ASSISTANCE TO LIMIT RADIATION EXPOSURE FROM URANIUM MILL TAILINGS USED FOR CONSTRUCTION

Mr. HASKELL. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on S. 266.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

Resolved, That the bill from the Senate (S. 266) entitled "An Act to amend Public Law 92–314 to authorize appropriations to the Energy Research and Development Administration for financial assistance to limit radiation exposure from uranium mill tailings used for construction, and for other purposes", do pass with the following amendments:

Strike out all after the enacting clause and insert:

APPROPRIATIONS AUTHORIZATION

SECTION 1. In addition to amounts otherwise authorized to be appropriated and appropriated, there is authorized to be appropriated, for the fiscal year 1979, $1,500,000 to carry out the provisions of title II of the Act of June 16, 1972 (Public Law 92–314; 86 Stat. 226).

AMENDMENTS TO PROGRAM PROVIDING REMEDIAL ACTION REGARDING URANIUM MILL TAILINGS

SEC. 2. (a) Section 202 of the Act of June 16, 1972, is amended—

(1) in subsection (b), by striking out "four years" and inserting in lieu thereof "eight years"; and

(2) by striking out "and" at the end of subsection (f), by striking out the colon at the end of subsection (g) and inserting a semicolon in lieu thereof, and by inserting after subsection (g) the following new subsections:

"(h) that, notwithstanding any requirement under subsection (b) or (c) of this section, payment for any remedial action commenced before the date of the enactment of this subsection may be made by the State to the property owner of record at the time such action was undertaken, but only if application therefor is filed by such owner with the State of Colorado within one year after such date of enactment and if the Secretary determines that such remedial action was undertaken in accordance with otherwise applicable provisions of this title and regulations thereunder; and

"(i) that the provision of subsection (c) of this section requiring any remedial action undertaken under this title be performed by the State of Colorado or its authorized contractor may be waived in writing by the State, with the approval of the Secretary, but only if application therefor is filed with the State by the property owner of record requesting such waiver and such waiver is granted before the commencement of such remedial action:".

(b) Title II of such Act is amended by adding at the end thereof the following new section:

"SEC. 205. Not later than one year after the date of the enactment of this section, the Secretary of Energy shall prepare and submit a detailed report to the Committees on Interstate and Foreign Commerce and on the Interior and Insular Affairs of the House of Representatives and the Committee on Energy and Natural Resources of the Senate with respect to actions taken or to be taken under this title, including data on payments made to the State and owners of record and a time table of those actions yet to be taken.".

(c) Section 202 of such Act is further amended—

(1) by striking out "Atomic Energy Commission" each place it appears and inserting "Secretary of Energy" in lieu thereof;

(2) by striking out "Commission" each place it appears and inserting "Secretary" in lieu thereof; and

(3) by striking out "the Joint Committee on Atomic Energy" each place it appears and inserting "both Houses of Congress" in lieu thereof.

(d) Section 203 of such Act is amended—

(1) by striking out "Atomic Energy Commission" and inserting "Secretary of Energy" in lieu thereof; and

(2) by striking out "as it deems necessary" and inserting "as he deems necessary" in lieu thereof.

(e) Authority to make payments under title II of such Act under amendments made by this Act shall be available only to such extent or in such amounts as are provided in advance in appropriation Acts.

Amend the title so as to read: "An Act to authorize appropriations for financial assisstance to limit radiation exposure to the public from uranium mill tailings used for construction, and for other purposes.".

Mr. HASKELL. Mr. President, this bill and the amendments of the House have been cleared on both sides of the aisle.

The bill, S. 266, initially passed the Senate on April 4, 1977, when it was considered on the Unanimous Content Calendar. There was no objection to any aspect of the bill and it was passed by voice vote.

In the intervening time, the bill was considered in the House by both the Committee on Interstate Commerce and the Committee on Interior and Insular Affairs. Upon their consideration of the bill, both committees reported the bill to the House floor with identical amendments. The bill was considered by the House under a suspension of the rules, and passed by a voice vote on January 24, 1978.

The legislation is intended to complete a program which was initiated with the passage of title II of Public Law 92–314. This law authorized a program of limited financial assistance to the State of Colorado to prevent radiation exposure to people in homes, schools, churches, and other buildings in the vicinity of Grand Junction, Colo. The problem arose from the widespread usage of uranium mill tailings from an abandoned mine which produced uranium for the Federal Government. Radiological surveys of the area have revealed that hazardous radon decay gas may enter the structures and poses a serious public health hazard. Initially, the statute authorized $5 million for a cost-sharing program in which the Federal Government and the State of Colorado participated on a 75–25-percent basis. Property owners were required to file by June 16, 1976, for remedial action to be undertaken. It is estimated that about 600 structures may require some sort of remedial action—a figure which is considerably more than was anticipated in 1972.

The House amendments to S. 266, in addition to technical amendments, include the authorization for an additional $1.5 million to complete the program and extend the deadline for eligible owners to file to June 16, 1980, which is an additional 4 years after the original deadline. It provides that persons who carried out remedial actions directly rather than waiting for it to be performed by the State of Colorado or its contractors may be reimbursed for the costs incurred. S. 266 is designed to insure that the remedial work will be completed at the end of this time extension and that no further funds will be needed.

Passage of this bill is an action which the people of Grand Junction expected to have completed 2 years ago. I believe that these people have lived with these health hazards and economic burdens long enough.

Mr. President, I move that the Senate concur in the amendments of the House of Representatives.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Colorado.

The motion was agreed to.

Mr. HASKELL. I thank the Senator from Idaho very much for yielding.

ENDANGERED AMERICAN WILDERNESS ACT OF 1978—CONFERENCE REPORT

Mr. CHURCH. Mr. President, I submit a report of the committee of conference on H.R. 3454 and ask for its immediate consideration.

The PRESIDING OFFICER (Mr. MATSUNAGA). The report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3454) to designate certain endangered public lands for preservation as wilderness, to provide for the study of additional endangered public lands for such designation, to further the purposes of the Wilderness Act of 1964, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of January 31, 1978, 1644.)

Mr. CHURCH. Mr. President, I ask unanimous consent that Fred Hutchison of my staff and Tom Williams and Dan Dreyfus of the Energy and Natural Resources Committee staff be granted privileges of the floor during consideration of the conference report on H.R. 3454, the Endangered American Wilderness Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHURCH. Mr. President, I am pleased today to rise in support of H.R. 3454, the Endangered American Wilderness Act.

As agreed to by the Conferees, H.R. 3454 would designate 17 areas comprising some 1.3 million acres of land for inclusion in the wilderness preservation system. One additional area—the so-called Spruce Creek additions to the proposed Hunter-Fryingpan Wilderness—would be designated for wilderness study.

I am well satisfied with the provisions of this bill as agreed to by the conference committee. The purpose of a conference is to seek middle ground—the resolution of differences in a manner acceptable to all parties. While this is never entirely possible, the conference did an excellent job in this instance of reconciling the positions of their respective Houses. Several areas included in the House-passed measure, but not

the Senate bill, were incorporated into the final version. Likewise, several areas included in the Senate measure, but not in the House-passed bill, were adopted for inclusion by the conference. Finally, agreement was reached on those areas included in both versions, but with differing acreages.

At this point, Mr. President, I ask unanimous consent that a summary of the conference substitute be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF CONFERENCE SUBSTITUTE

Area	H.R. 3454	Senate amendments	Conference substitute
Pusch Ridge, Ariz	56,430	56,430	56,430
Galiuro Add., Ariz	55,210		Deleted
Golden Trout, Cali	179,625	333,100	306,000
Santa Lucia, Calif	21,250	21,250	21,250
Ventana Additions, Calif	61,080	61,000	61,000
Chama River Canyon, N. Mex	50,300	50,300	50,300
Manzano Mountain, N. Mex	37,000	37,000	37,000
Sandia Mountain, N. Mex	30,930	30,930	30,930
Hunter-Fryingpan, Colo	68,000	81,000	74,450
Instant study			8,000
French Pete, Oreg	45,400	45,400	41,400
Wenaha-Tucannon, Oreg./Wash	175,000	185,000	180,000
Zig Zag, Oreg		33,000	33,000
Kalmiopsis, Oreg	280,000	82,400	92,000
Wild Rogue, Oreg	38,200		36,700

Gospel-Hump, Idaho:			
Wilderness		206,000	
Management		92,000	(same)
Development		45,000	

Mr. CHURCH. Mr. President, I am especially proud to note the inclusion of the Gospel-Hump area in Idaho in the final version of H.R. 3454.

The Gospel-Hump provision of this legislation is unique, providing for both wilderness and multiple use within this 343,000-acre roadless area in Idaho County.

The Gospel-Hump compromise was worked out between representatives of Idaho conservation groups and civic and business leaders in Idaho County during 1977. Last April, I brought both sides together in hopes of ending a protracted delay over the future status of this large roadless area, and once this compromise was reached, I introduced legislation to implement it. Hearings were held in Idaho and Washington, and the legislation was suitably refined.

The Gospel-Hump agreement is precedent-setting. It was drawn up by local people to meet local needs. It provides that, after years of delay, the wood products industry is assured of trees for local mills and continued jobs in the area. At the same time, it creates a readily accessible new wilderness.

Under the plan, about 206,000 acres in the alpine regions of Gospel-Hump north of the Salmon River will be designated for inclusion in the national wilderness system. Meanwhile, 137,000 acres will be added at once to the allowable cut for Idaho County, all of which will be eventually managed for multiple use. Of this, 45,000 acres will be opened for immediate development, and the remaining 92,000 acres will be made available once a study is completed on timber resources, fish and wildlife, and soil conditions.

It should be noted that the new wilderness will be one of the most accessible in Idaho. It was drawn specifically to leave intact existing roads that reach into the heart of the area, and the conference committee voted to direct that these roads be maintained and marked during winter months to insure continued access by the general public.

The compromise has significance beyond Idaho. It is a pilot project that can serve other areas where management decisions are bogged down in controversy. Gospel-Hump has shown that local citizens, working together, can resolve their differences to serve the common good.

Mr. President, in 1964, Congress enacted the Wilderness Act after more than 8 years of deliberation. That law created the National Wilderness Preservation System to be comprised of Federal land preserved as wilderness by decision of Congress. The lands involved are to be managed under a common policy: To perpetuate the natural character of the land and its ecological community of life, in order to secure for all Americans the significant benefits and values which wilderness gives our lives and our culture.

Without a doubt, Mr. President, the areas we are considering today for inclusion into that system meet these high purposes and standards. I urge my colleagues to join with me in adopting this conference report.

Mr. President, I yield first to my distinguished colleague on the committee, the able senior Senator from Oregon (Mr. MARK O. HATFIELD), whose help in seeing this legislation through, from the time of our initial committee hearings to the final resolution of some difficult questions in conference, was a source of steady reassurance to me. Without his help, I am quite certain we would not have this bill before us now. I commend him for his efforts and for the continuing demonstration of his commitment to the establishment of an adequate and appropriate wilderness system in this country.

Mr. MARK O. HATFIELD. I thank the Senator from Idaho for his very generous and gracious remarks.

Mr. President, I am pleased to support the conference report on the Endangered American Wilderness Act.

In particular, I would like to draw attention to section 3 of the bill, which is the Oregon Omnibus Wilderness Act. This proposal has undergone extensive examination and revision since it was first circulated in draft form over 5 years ago. With the enactment of this bill, two Oregon wilderness areas will be enlarged and three areas will be designated new wilderness areas in Oregon. In accordance with the report of this bill of the Senate Committee on Energy and Natural Resources, two additional areas in Oregon will be studied for their wilderness potential.

Mr. President, I ask unanimous consent that the section of the joint statement of the managers dealing with the Oregon areas be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

3. OREGON OMNIBUS WILDERNESS ACT

On June 20, 1977, the Senate passed S. 658, the Oregon Omnibus Wilderness Act. The Senate amendment to H.R. 3454 incorporates several provisions of S. 658 and retains the title of the Senate passed bill.

The House passed bill does not make specific reference to the Oregon Omnibus Wilderness Act.

The conference substitute adopts the Senate approach and incorporates the various proposed Oregon wilderness areas in a separate Oregon section.

A. KALMIOPSIS ADDITIONS, OREGON

The House bill designates a 280,000 acre addition to the existing Kalmiopsis Wilderness. The Senate amendment would increase the present wilderness by approximately 82,400 acres.

The conference substitute designates an area of approximately 92,000 acres for addition to the existing Kalmiopsis Wilderness. This area consists of the 82,400 acres contained in the Senate amendment and an additional area comprising some 10,000 acres south of the proposed Senate addition.

In agreeing to enlarge the Kalmiopsis Wilderness by 92,000 acres, the conferees recognize that additional acreage of roadless land surrounds this area. Much of this contiguous land was included in the House-passed bill and should be considered by the Forest Service in its Roadless Area Review and Evaluation program (RARE II).

In excluding the additional lands in the House-passed bill from the present wilderness additions, the conference committee stresses that it does not intend to prejudice further consideration of the wilderness suitability of these lands nor to prejudge in any way the possibility that some additional acreage may be proposed at a later time for addition to the enlarged Kalmiopsis Wilderness. The conferees direct that these lands be considered in the RARE II program.

B. WILD ROGUE, OREG.

The House bill designates a 38,200 acre Wild Rogue Wilderness. The Senate amendment contains no comparable provision.

The conference substitute designates a Wild Rogue Wilderness comprising approximately 36,700 acres. The conferees agreed to delete some 1,500 acres from the House proposal to exclude several areas which have recently been timbered.

The conferees also agreed to adopt a provision making it clear that the portion of the Wild Rogue wild and scenic river which flows through the proposed wilderness will continue to be managed as a wild river in accordance with the provisions of the Wild and Scenic Rivers Act, notwithstanding any provisions of that act or the Wilderness Act to the contrary.

The conferees noted that the Wild Rogue Wilderness Area and the additions to the Kalmiopsis Wilderness Area as proposed in the conference substitute include certain acreages of Oregon and California revested grant lands that are congressionally dedicated to commercial forest production and are managed by the Bureau of Land Management and the U.S. Forest Service. The fact that these special act lands which are intermingled with national forest lands are now designated as wilderness should not be considered as precedent setting. They are included because of their own unique wilderness qualities when combined with other Federal lands.

C. WENAHA-TUCANNON, OREG./WASH.

The House bill designates a 175,000 acre Wenaha-Tucannon Wilderness while the Senate amendment proposes a 185,000-acre wilderness.

The conference substitute designates a 180,000 acre wilderness, deleting approximately 5,700 acres from the Senate amendment and adding approximately 700 acres. The deletion consists of 3 parcels: the approximately 3,300 acre Bear Canyon area and two portions of the Wenaha Breaks area totalling approximately 2,400 acres. The addition eliminates an error in the Senate map and adopts the House boundary which adds approximately 700 acres to the wilderness by correctly placing the boundary line in the northwest portion of the proposed wilderness along Big Turkey Tail Ridge rather than along the Turkey Creek stream bottom.

During congressional consideration of possible wilderness designation in the Wenaha-Tucannon area of the Umatilla National Forest, it has become clear that this portion of the forest contains a multitude of resources. Not only do the lands contiguous to the proposed Wenaha-Tucannon Wilderness, as approved by the conference committee, embrace many merchantable stands of timber, but these lands are important habitat for Rocky Mountain Elk as well.

The conference, after some deliberation, felt that it was possible to allow some logging in those portions of the Upper Tucannon Roadless Area of the Oregon Butte Planning Unit (as referenced in the U.S.D.A. Forest Service Final Environmental Statement for the Oregon Butte Planning Unit, dated April 22, 1977), lying outside of the boundaries of the Wenaha-Tucannon Wilderness proposed in H.R. 3453, if certain prescriptions were followed to minimize the effects of such logging activities on the region's resident and migratory elk populations. Thus, the Secretary of Agriculture is directed to manage the above-mentioned areas for multiple-use purposes and to allow such logging activities provided that:

1. All roads built into these areas for the purpose of timber harvesting are to be designed and built to minimize soil disturbance and the possible adverse effects of these roads on fish and wildlife populations, including but not limited to:

a. constructing and maintaining such roads at the minimum widths necessary to safely accommodate logging trucks, but in no case wider than 12 feet on the running surface;

b. maintaining standards of alignment, and grade that will allow these roads to follow, as nearly as possible, the contours of the land with a minimum of excavation and earth movement to accomplish the construction; and

c. installing the types and quantities of drainage structures associated with these roads which will continue to function properly for several years without periodic maintenance.

2. Roads built into timber harvest areas shall be closed to all motorized use during the interim period between each harvesting or reforesting operation, unless needed in emergency situations for the protection of life or property. During the closure periods, measures shall be taken to ensure that motorized vehicles cannot enter onto or travel upon these roads. These measures are to include steel gates with suitable locks. In addition, roads shall be treated in these closure periods so as to minimize the danger of soil erosion. Erosion control measures to be taken might include, but need not be limited to:

a. revegetation of the roadbed with herbaceous species.

b. outsloping.

c. crossditching.

d. covering with logging slash, and

e. hand maintenance of drainage structures.

3. Timber harvest activities are not to be permitted in these areas during the months of October and November, or during the elk calving season in the spring.

4. The roads built into timber harvest areas shall be permanently closed at the conclusion of logging and reforestation activities and suitable measures shall be taken to assure their revegetation, and continued closure to motorized vehicle use.

5. No clearcuts shall be permitted within these areas.

Both the House and Senate recognized and approved of the long established use of much of the Wenaha-Tucannon area for hunting. Although wilderness designation does not affect hunting activity per se, the conferees want to emphasize the importance of this use in the Wenaha-Tucannon area and make clear that congressional intent is that Forest Service management policies, when at all possible, should make allowance for and not conflict with this activity. Established rustic shelters or structures, in particular, should not be disturbed. The use and some limited maintenance of these existing structures should be allowed to continue until their presence creates a clear conflict with the area's wilderness values. Of course, the use of motorized vehicles and chain saws in connection with hunting activities in the proposed wilderness, will not be allowed under wilderness designation.

D. ZIG ZAG (MT. HOOD ADDITIONS), OREG.

The Senate amendment to H.R. 3454 designates a 33,000-acre addition to the existing Mt. Hood Wilderness. The House bill contains no such provision.

The conference substitute adopts the Senate provision and includes the area. A description of the proposed Mt. Hood additions can be found in Senate Report 95-329.

E. FRENCH PETE, OREG.

Both the House bill and the Senate amendment would designate a 45,400-acre French Pete Wilderness.

Mr. MARK O. HATFIELD. Mr. President, I am completely comfortable with the action we are taking today. Very few areas have received the kind of comprehensive public and congressional study as those in section 3 of this bill. In the fall of 1972, I circulated my first draft proposal. The first bill was introduced in March of 1974, and a new version was introduced in the 94th Congress. Public hearings were conducted both in Oregon and in Washington, D.C. The input received at these hearings was given careful consideration, as were the many letters I have received on this subject.

I think, Mr. President, that there is no better example of the input of citizen groups in a piece of legislation than in this particular section of this Endangered American Wilderness Act and all other sections as well. But from my firsthand experience, I take this occasion to give recognition to the careful, scholarly input of citizen groups interested in wilderness promotion.

During the conference on this legislation, considerable controversy arose with reference to the Kalmiopsis additions. My colleague from Oregon, Representative JIM WEAVER, and I had an honest difference of opinion on the size of the area to be added. While it took some time, we were able to reach agreement on a 92,000-acre addition with the understanding that the difference between this area and the 280,000 acres included in the House bill will be considered in the Forest Service's roadless area review and evaluation process, known as Rare II. I want to take this opportunity to thank my colleague for the spirit which marked his approach to this issue. It was difficult for both of us, but I believe that the compromise agreement is a good one. I intend to give the Forest Service study and recommendations a thorough review when they are completed. I point out that the acres which were included in Representative WEAVER's approach will be adequately protected during this research and study period of Rare II.

In addition, Mr. President, I want to thank my other colleagues who served on the conference committee. In particular, Senator CHURCH as our chairman and Representative UDALL, the House committee chairman, deserve praise for their outstanding leadership on this issue.

I might say, the State Department could well utilize the diplomacy with which they handled this most difficult problem from the State of Oregon and Kalmiopsis.

Most importantly, I want to extend my thanks to all of those individuals who took part in developing the Oregon Omnibus Wilderness Act. Through their letters, personal comments and testimony, I believe that the bill has been greatly improved. The result is a product which insures that their children and future generations will benefit from the beauty we are protecting today in this bill.

Again, Mr. President, I wish to thank the Senator from Idaho (Mr. CHURCH), who very patiently and very understandingly sat through many sessions which were very difficult.

Mr. MELCHER. Mr. President, only one area in this bill is in Montana. It is described in (k) of section 2. Welcome Creek, in the Lolo National Forest, comprises 28,000 acres. It was not in the bill as it passed the Senate. Senator CHURCH, as chairman of the Senate conferees last fall, was fully apprised of my objections to portions of this area being classified as wilderness. Senator CHURCH and the other conferees courteously considered my objections. However, they were not swayed by my points of view, and the conference report includes the total 28,000 acres for Welcome Creek.

The area I had proposed for wilderness for the Welcome Creek area was somewhat different than what is in the conference report. The area I had suggested be excluded from the wilderness had been mined as old placers during the late 1800's. There was also lode mining in the Cleveland Mountain and Carron Creek areas. There has been active exploration and mining just to the west of the Welcome Creek area. There are still old ditches and cabins in the area along Welcome Creek.

The area also has about 20 miles of trails and about 4 miles of graded road that have been used by hunters and snowmobilers. The hunters use their four-wheel vehicles to enter the area on the roads and trials. The snowmobilers enter the trail system from the Eight-mile Saddle area and from roads approaching this trail system from further south, below the Cleveland Mountain area.

Until December 31, 1977, there was an active timber sale in the Carron Creek

drainage. There is a substantial chronology to what has happened to this sale which I will read into the RECORD.

The following is an outline of the flow of events surrounding the Carron Creek timber sale. There is serious question concerning potential claims against the Federal Government because of Forest Service delays and ultimate desire to unilaterally cancel the sale.

The Carron Creek timber sale on the Lolo National Forest was sold in December 1969, to Montana Lumber Sales Inc. of Missoula with an original termination date of October 1, 1974, but the corporation's mill burned in January 1972, and no activities took place on the sale. The sale was for 8.36 mm board feet.

In May of 1971, well before the mill burned, the Forest Service issued management guidelines and requirements for the Rock Creek drainage on the Lolo and Deerlodge National Forests, of which Carron Creek is a tributary.

Also in 1971, in June, both the Sierra Club and Trout Unlimited appealed the decision of the regional forester to sell timber in the Rock Creek drainage.

Five months after the mill burned, in June of 1972, Regional Forester Steve Yurich advised the Lolo and Deerlodge forests of a moratorium on any new developments or timber sales until planning was completed within specific planning units.

In October of 1973, an environmental analysis report was issued which excluded the Carron Creek sale because it already was under contract. In December of 1973, a third-party agreement was made by Montana Lumber Sales with Waleswood Inc. of Darby, with the original termination date, October 1, 1974, extended to November 9, 1974, because of heavy snow during the spring of 1974. A request by Waleswood for a further extension was denied by the Lolo National Forest supervisor.

Waleswood appealed the denial and the regional forester extended the sale to December 31, 1977. The extension, however, was contingent upon Waleswood accepting an environmental modification on the sale.

In April of 1974, Waleswood requested permission to use an alternate route to the sale and 2 months later began cutting right-of-way, only to be notified by the Forest Service of timber trespass because the Forest Service had not formally approved the alternate route.

In August of 1974, Waleswood and the Forest Service signed an agreement to modify the contract for the alternate route, but later the same month Waleswood requested a 1-year extension because of a depressed market.

The extension was denied by the Lolo National Forest supervisor, who said actual logging production was a key factor in considering an extension. The supervisor also mentioned that Forest Service policy was not to start new development in the Rock Creek drainage.

Waleswood appealed to the regional forester, who replied that contract extensions were not an appealable matter under new regulations effective in September 1974.

In May of 1975, however, the regional forester advised Waleswood he was reinstating the Carron Creek sale because of contractual extension language and because the sale was not considered a new activity in the drainage.

In June and July of 1975, Waleswood signed an interim contract modification providing that the sale boundary would stay at about 2,500 acres but that there would be 19 cutting blocks instead of the original 8 and that logging acreage would be cut from 700 to 350 acres. Average cutting block size was reduced from 87 to 18 acres.

The Western Montana Fish and Game Association asked for a stay of operations and oral review in August 1975; the request was sent to John McGuire, Chief of the Forest Service. McGuire advised the association later the same month that an oral presentation was granted but that a stay of operations was denied because of insufficient reasons in the association's request.

In May of 1976, the first written communication was noted in Forest Service files in which it was made known that Clifford Rawlings wanted to third party the sale, likely with a logging subcontractor to do the actual work. Rawlings' attorney was advised that standard timber volume had been reduced from 8,360M board feet to 4,000M board feet; that temporary road mileage was reduced from 22 to 7½ miles, and that all but two clearcut blocks were modified in shape or size or eliminated.

In June of 1976, the Missoula district office of the Montana Department of Fish and Game advised against logging the sale because of wildlife habitat disruption, but conceded that the Forest Service-developed environmental analysis report should be followed if the sale had to be brought to its logical conclusion.

In August of 1976, a Waleswood representative said the corporation intended to third party the sale. Waleswood in December 1976 signed the environmental modification for the sale and wanted a contract extension in order to negotiate the third-party agreement. The Forest Service reserved the right to approve any such agreement.

In late December 1976, the attorney for Waleswood formally requested the Forest Service to third party the sale to Rawlings because Waleswood had liquidated its sawmill at Darby and was no longer in the logging/sawmill business.

In May of 1977, the Lolo National Forest supervisor advised Rawlings' attorney that the third-party agreement was denied because:

Land management planning was in progress for the portion of Rock Creek including Carron Creek.

The administration supported the endangered American wilderness bill.

Two companies had the opportunity to perform on the sale but had failed to do so.

With recent timber volume reductions via the environmental modification, the sale was less economically viable.

The contract with Waleswood was still in existence, under which performance could take place.

In a memorandum dated June 14, 1977, the Lolo Forest supervisor advised the regional forester of the third-party denial and said:

Because of the history of the sale and the recent material change in the Administration's position from wilderness study to immediate wilderness for Welcome Creek, we not only intend to deny the third-party agreement but also are considering unilateral cancellation of the contract. No logging or road building has occured to date on the sale. Our course of action is to reaffirm our denial of Mr. Rawlings' application as third-party; and if it appears that Waleswood intends to log the sale, then we should immediately instigate cancellation."

Then on June 30, 1977, in another memorandum to the regional forester he recommended cancellation because of the administration's position, even though the legislation was modified to omit Welcome Creek.

Rawlings' attorney then requested reconsideration by the Lolo National Forest supervisor, who, last July, reaffirmed denial. Rawlings attorney appealed to the regional forester and, last October 26, the acting regional forester reaffirmed denial. Rawlings' attorney was given 30 days to file notice of appeal and request second-level review. This small business setaside sale is now settled as far as the Forest Service is concerned as of December 31, 1977.

I strongly recommended that the conference committee adopt my recommended 18,400 acres for Welcome Creek, which excluded this sale, excluded the graded road and other trails and the mining claims.

It is likely that the Forest Service record on this sale will be used as a basis for a claim by the present owner of this sale for a settlement.

The legal questions involved should not have been complicated by congressional action designating the sale area as wilderness. In my judgment, it is unfortunate that the Forest Service has used that possibility as one of the reasons for denying the third-party sale.

The area I had proposed for wilderness was about 10,000 acres less than what the conference included in their report, but it was the prime area and of very high wilderness character. I had hoped the conference would adopt the smaller area, but they did not.

For the reasons I have stated, I believe it is necessary for me to emphasize my objections by opposing the adoption of the conference report with the addition of the entire 28,000-acre Welcome Creek area, which was in the House-passed bill but not in the bill as it passed the Senate on October 20 of last year.

Mr. President, I think that the complications that have been involved with this timber sale and the possibility of litigation that will follow on the final settlement of the sale would be better carried out without any action on the part of Congress regarding designating it as wilderness.

For the reasons I have also stated

previously, I believe the quality of some of the land for wilderness designation is not as high as it should be and would be better left out of the national wilderness preservation system.

There is some activity that is usual in the area that will not be able to go forward—that is, the use of vehicles for hunters getting into the area, or snowmobilers, who have been using the area—once it is designated as wilderness.

Furthermore, I have developed a more purist concept in my judgment of what we should designate as wilderness in the West. The signs of man's activity in parts of this area make it less desirable for wilderness, in my judgment, and it should have been excluded.

However, I do appreciate the courtesy extended to me by Senator CHURCH and the other conferees in reviewing my views on this matter and taking them into consideration before their action.

In conclusion, Mr. President, while my vote will be in opposition to the conference report, it will not be cast in any way as an objection to the other areas that are included in the bill.

Mr. CHURCH. Mr. President, first of all, I thank the distinguished Senator from Montana for making his views a part of the record.

Nothing has been more difficult than to address those particular cases in which two Senators from a given State were in disagreement concerning the inclusion of a particular area in the national wilderness system. That was the case in this instance.

When the original Senate version of the bill was taken up in the committee, Welcome Creek was proposed as a wilderness study area. The late Senator Metcalf testified in favor of instant wilderness for the entire 28,400-acre area—identical to the House position—while Senator MELCHER requested that the area be designated as instant wilderness but reduced in size by about half. In an effort to avoid a clash on the Senate floor, we excluded the area from the Senate version knowing that the issue would have to resolved in conference.

The first day the conferees met on H.R. 3454, the House asked the Senate to recede and include the House provision in the conference substitute. The House provision called for the whole 28,400-acre area as instant wilderness.

Senator Metcalf moved that the Senate recede from its position and adopt the House boundary. While I think the votes were there on the Senate side to recede that day, the conferees agreed to postpone action in light of the fact that Senator MELCHER had written the Senate conferees asking them to consider his position.

The next day, Senator Metcalf, at the urging of the House conferees, moved the Senate recede to the House and the Senate conferees agreed. Nothing more was mentioned about the area during the other conference meetings.

It is my understanding that the boundaries proposed by Mr. MELCHER cut the Welcome Creek drainage in half by including only the lower reaches of Welcome Creek—about 18,000 acres. The House-passed boundary of 28,440 acres utilizes the main hydrologic boundary of the Sapphire divide as the western boundary thereby encompassing the entire drainage. All of the drainage is wild and all of it meets every criteria in the Wilderness Act. The area omitted by Senator MELCHER is very important as a migratory area for elk as well as watershed protection for a major tributary—Welcome Creek—of Rock Creek—a nationally famous blue-ribbon trout stream.

The boundary Senator MELCHER proposed is based primarily on three factors: First, exclusion of mining claims in the upper reaches of Welcome Creek. The conferees felt that all these claims are unpatented, and none of them having been worked in recent years, there was little evidence of past mining activity in the area, and therefore concluded that this argument should not be accepted; second, exclusion of the Welcome Mountain road—this road was built 15 years ago to facilitate logging which has never taken place because of low timber values. Further, the road is low standard due to lack of maintenance and thus does not meet the definition of a "road" as defined by RARE II. For these reasons, the conferees were not persuaded on the basis of this second argument; third, exclusion of the Carron Creek timber sale—this sale was originally sold in 1969, but because of low timber values in relation to hgh road costs the sale has been defaulted on three times and to this date remains unlogged. The sale would block a key migratory route for an important elk herd.

The purpose of designating this area as wilderness is to protect the Welcome Creek watershed. Like Savage Run in Wyoming, this is a small compact area and deleting the northern half of the watershed while protecting the southern half with wilderness designation just does not make good sense from a resource standpoint.

It was for these reasons that the conferees acted to accept the House provision and in accordance with the wishes of the late Senator Metcalf.

As I said at the outset, Mr. President, it is a difficult matter to deal with an issue when two Senators from the same State are in disagreement. However, I tried to keep Senator MELCHER informed as the conference proceeded and tried to deal in good faith with him. I respect the arguments he made and the reasons why he has taken his position this evening and why he feels constrained to vote against the bill on final passage.

I hope, however, that other Senators will not be stmpeded in voting against the adoption of the conference report.

Mr. STEVENS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

PRESIDENTIAL APPROVAL

A message from the President of the United States that on February 6, 1978, he approved and signed the following act:

S. 1585. An act to amend title 18 of the United States Code relating to the sexual exploitation of minors, and for other purposes.

MESSAGES FROM THE HOUSE

At 1 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its reading clerks, announced that the House has passed the bill (S. 1360) to amend section 14(e) of the National Forest Management Act of 1976, without amendment.

The message also announced that the Speaker has appointed Mr. FASCELL, chairman, Mr. JOHNSON of California, vice chairman, Mr. GIBBONS, Mr. HANLEY, Mr. MEEDS, Mr. BAUCUS, Mr. OBERSTAR, Mr. FOWLER, Mr. BROOMFIELD, Mr. MCEWEN, Mr. WINN, and Mr. STANGELAND as members of the U.S. delegation of the Canada-United States Interparliamentary Group to be held in New Orleans.

The message further announced that the Speaker has appointed Mr. Wilbur J. Cohen, of Ann Arbor, Mich., and Mr. Robert Julius Myers, of Silver Spring, Md., as members of the National Commission on Social Security.

ENROLLED BILLS SIGNED

At 5:33 p.m., a message from the House of Representatives delivered by Mr. Hackney, announced that the Speaker has signed the following enrolled bills:

S. 1360. An act to amend section 14(e) of the National Forest Management Act of 1976.

S. 1509. An act to provide for the return to the United States of title to certain lands conveyed to certain Indian pueblos of New Mexico and for such land to be held in trust by the United States for such tribes.

The enrolled bills were subsequently signed by the President pro tempore.

The message also anounced that the House has passed the bill (H.R. 7843) to provide for the appointment of additional district and circuit judges, and for other purposes, in which it requests the concurrence of the Senate.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. LONG, from the Committee on Finance, with an amendment:

S. 2360. A bill to authorize appropriations to reimburse certain expenditures for social services provided by the States prior to October 1, 1975, under titles, I. IV, VI, X, XIV, and XVI of the Social Security Act (Rept. No. 95–632).

SPECIAL REPORT RELATING TO THE PANAMA CANAL

By Mr. STENNIS, from the Committee on Armed Services:

A special report relating to the "Defense, Maintenance, and Operation of the Panama Canal, Including Administration and Government of the Canal Zone" (together with additional views) (Rept. No. 95–633).

Mr. STENNIS. Mr. President, I am pleased to deliver to the Senate the report of the Armed Services Committee of its hearings on the proposed Panama Canal treaties.

The Committee on Armed Services has had a long relationship with issues involving the Panama Canal and the Canal Zone. Pursuant to our jurisdiction under the Senate rules, we have worked on a number of pieces of legislation effecting the operation of the canal enterprise over the years, and of course have had a special concern for the national security aspects of our presence in Panama.

From the time the proposed treaties were announced, we have had our staff working on an indepth analysis of the treaties, with particular emphasis on the two areas where it was felt that our committee could make a special contribution to the public debate on the treaties—first, the military issues involving the value of the canal and its defense; and second, the economic and financial effects of the treaties on the Panama Canal Company and on the taxpayer. In addition to the work of our own staff, we engaged a consultant to do some of the basic economic and management analysis necessary for an intelligent discussion of the issue of economic impact. The consultant's report is printed with the record of the hearings for the use of the Members of the Senate.

The committee also held 3 full days of hearings on the proposed treaties. We heard from a spectrum of witnesses on the military value of the Panama Canal and the national security impact of these treaties. Some were opposed and some were in favor. We heard from members of the present joint chiefs and from former chairmen; we also took testimony from officers who had specific experience in Panama and in Latin America. On the economic issues we heard at some length from Governor Parfitt, who heads both the Panama Canal Company and the Canal Zone Government; from our own consultant; and from Mr. Elmer Staats, the Comptroller General of the United States.

In these hearings, we have tried to raise important military and financial questions that should be addressed in the debate on these treaties. We have rushed through the printing of the hearing record, so that it could be available tomorrow for all Members. I urge everyone to read the actual testimony.

The rules of the Senate also place on our committee the responsibility of studying and reporting to the Senate from time to time on matters within our jurisdiction. Pursuant to this charge I am delivering this report, which will supplement the printed hearings and assist Members in understanding the complex issues surrounding these treaties. The report consists of careful summaries of testimony of each witness heard by the committee, along with additional views of members of the committee who wished to submit them.

I would like to add, finally, that the Committee on Armed Services took no vote on these treaties as such. Primary jurisdiction on the treaties as such rests with the Senate Foreign Relations Committee. We felt our function was to explore the issues within our special areas of expertise, and make the results available to all. I hope that the matters we have raised will sharpen this debate and contribute to a more informed decision, and I believe this will be the case.

Mr. President, I hereby deliver the report of the committee.

By Mr. LONG, from the Committee on Finance, without amendment:

S. Res. 392. An original resolution authorizing additional expenditures by the Committee on Finance for inquiries and investigations. Referred to the Committee on Rules and Administration.

Mr. TALMADGE, from the Committee on Agriculture, Nutrition, and Forestry, without amendment:

S. Res. 393. An original resolution expressing the sense of the Senate that emergency action should be taken by the President and the Secretary of Agriculture to bolster the farm economy (Rept. No. 95–634).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary:

William H. Webster, of Missouri, to be Director of the Federal Bureau of Investigation (Ex. Rept. No. 95–14).

(The above nomination from the Committee on the Judiciary was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. EASTLAND, from the Committee on the Judicary:

A. David Mazzone, of Massachusetts, to be U.S. District Judge for the District of Massachusetts.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. CANNON (for himself and Mr. PEARSON) (by request):

S. 2506. A bill to amend the Intercoastal Shipping Act, 1933, to make public the financial reports of common carriers by water in interstate commerce, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. ANDERSON (for himself, Mrs. HUMPHREY, Mr. BROOKE, Mr. KENNEDY, Mr. BAYH, Mr. FORD, Mr. GRAVEL, Mr. CHURCH, Mr. STEVENSON, Mr. CLARK, Mr. WILLIAMS, Mr. MCGOVERN, Mr. HOLLINGS, Mr. GLENN, Mr. THURMOND, Mr. LAXALT, Mr. RANDOLPH, Mr. WEICKER, Mr. JACKSON, Mr. JAVITS, Mr. HAYAKAWA, Mr. LEAHY, Mr. MORGAN, and Mr. HASKELL):

S. 2507. A bill to authorize the Smithsonian Institution to acquire the Museum of African Act, and for other purposes; to the Committee on Rules and Administration.

By Mr. LONG:

S. 2508. A bill to amend the Regional Rail Reorganization Act of 1973 to authorize additional appropriations for the United States Railway Association; to the Committee on Commerce, Science, and Transportation.

By Mr. EASTLAND:

S. 2509. A bill for the relief of Rodolfo N. Arriola; to the Committee on the Judiciary.

By Mr. MORGAN:

S. 2510. A bill to provide that no funds be expended on the new program on smoking and health announced by the Secretary of Health, Education, and Welfare on January 11, 1978 without specific approval by Congress; to the Committee on Human Resources.

By Mr. RIBICOFF (by request):

S. 2511. A bill to restrict the possession and carrying of pistols, other firearms, and other dangerous weapons by members of the District of Columbia Department of Corrections to periods of time when they are on duty and authorized by the Director of the District of Columbia Department of Corrections; to the Committee on Governmental Affairs.

S. 2512. A bill to provide explicit authority for the arrest of material witnesses; to the Committee on Governmental Affairs.

S. 2513. A bill to establish the position of General Counsel in the Environmental Protection Agency; to the Committee on Governmental Affairs.

By Mr. GRIFFIN:

S. 2514. A bill to amend the Coastal Zone Management Act of 1972 in order to provide financial assistance to Great Lakes States to enable the States to implement erosion management measures, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. HATHAWAY (for himself and Mr. WILLIAMS):

S. 2515. A bill to require government contractors to establish and operate alcohol abuse and alcoholism programs and services, or otherwise arrange for referral to such services, and for other purposes; to the Committee on Governmental Affairs and the Committee on Human Resources, jointly, by unanimous consent.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. CANNON (for himself and Mr. PEARSON) (by request):

S. 2506. A bill to amend the Intercoastal Shipping Act, 1933, to make public the financial reports of common carriers by water in interstate commerce, and for other purposes; to the Committee on Commerce, Science, and Transportation.

FINANCIAL REPORTS OF COMMON CARRIERS

Mr. CANNON. Mr. President, I introduce today, at the request of the Federal Maritime Commission, and on behalf of myself and my colleague, Mr. PEARSON, a bill to amend the Intercoastal Ship-

ping Act, 1933, to make public the financial reports of common carriers by water in interstate commerce and for other purposes.

I ask unanimous consent that the text of the bill, the letter of transmittal and the statement of purpose and need of the legislation be printed in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 2506

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5 of the Intercoastal Shipping Act, 1933, be amended by being redesignated section 6, and adding new section 5 as follows:

"SEC. 5. The Commission is hereby authorized to require annual, periodical, or special reports from every common carrier by water in interstate commerce, as defined in section 1 of the Shipping Act, 1916 and to prescribe the manner, and form in which such reports shall be made. Such annual reports shall give an account of the affairs of the carrier in such form and detail as may be prescribed by the Commission.

"The statistics, tables and figures contained in such annual or other reports shall be preserved as public records in the custody of the Secretary of the Commission, and shall be received as *prima facie* evidence of what they purport to be for the purpose of investigations by the Commission and in all judicial proceedings; and copies of and extracts from any of any of said reports, made public records as aforesaid, certified by the Secretary, under the Commission's seal, shall be received in evidence with like effect as the originals."

STATEMENT OF PURPOSE AND NEED FOR THE BILL TO AMEND INTERCOASTAL SHIPPING ACT, 1933, TO MAKE PUBLIC THE REPORTS OF DOMESTIC OFFSHORE OPERATORS

Every common carrier by water in the domestic offshore commerce of the United States is required by the Intercoastal Shipping Act, 1933, to file tariffs with the Federal Maritime Commission, and is also required by the Commission's General Order 5 to file an annual report within 120 days after the close of its fiscal year. Under the Commission's General Order 11, each such carrier is also required to file with the Commission, within 150 days of the close of its fiscal year, a statement of rate base and income account for each domestic offshore trade served by that carrier. It is believed that the Intercoastal Shipping Act, 1933, should be amended to enable the Commission to make available to the public the information contained in these reports, which is presently held confidential.

Both the Interstate Commerce Commission and the Civil Aeronautics Board have specific statutory authority to make available for public inspection the financial reports submitted by carriers subject to their respective jurisdictions. The Federal Maritime Commission should have similar authority, since it is often difficult, if not impossible, to explain this lack of comparability in responding to inquiries from the public.

The annual report which is filed with the Federal Maritime Commission pursuant to General Order 5 may, depending on the operations and ownership of the carrier, also be filed with the Interstate Commerce Commission and/or the Maritime Administration. In such cases data are submitted on the same form. If the carrier does not delete the Federal Maritime Commission information on its submission to the Interstate Commerce Commission, the Federal Maritime Commission is in the position of having to deny access to information which is publicly available at the Interstate Commerce Commission.

It is also believed that the availability of this information to the public may be meaningful to protestants of rate increases who, without this information, are forced to make uninformed protests of rate increases or endorsements of rate decreases.

This bill would make possible the conduct of domestic rate proceedings without the awkward imposition of confidentiality invoked under Rule 10(aa) of the Commission's Rules of Practice and Procedure. In some more recent Commission proceedings, carriers have not chosen to invoke confidentiality. Moreover, the invocation of Rule 10(aa) is not binding on the presiding Administrative Law Judge or the Commission.

Finally, this bill would be consistent with the current trend toward making available to the public all government-held information that the security of the nation permits. Such disclosure is in the spirit of the Freedom of Information and Sunshine Acts, would materially assist the administrative and judicial processes, and would be consistent with the authorities of the two other transportation regulatory agencies, the Interstate Commerce Commission and the Civil Aeronautics Board.

It is believed that this legislation will not involve any increase or decrease in appropriations.

By Mr. ANDERSON (for himself, Mrs. HUMPHREY, Mr. BROOKE, Mr. KENNEDY, Mr. BAYH, Mr. FORD, Mr. GRAVEL, Mr. CHURCH, Mr. STEVENSON, Mr. CLARK, Mr. WILLIAMS, Mr. MCGOVERN, Mr. HOLLINGS, Mr. GLENN, Mr. THURMOND, Mr. LAXALT, Mr. RANDOLPH, Mr. WEICKER, Mr. JACKSON, Mr. JAVITS, Mr. HAYAKAWA, Mr. LEAHY, Mr. MORGAN, and Mr. HASKELL):

S. 2507. A bill to authorize the Smithsonian Institution to acquire the Museum of African Art, and for other purposes; to the Committee on Rules and Administration.

MUSEUM OF AFRICAN ART

Mr. ANDERSON. Mr. President, our late colleague, Senator Hubert H. Humphrey, was a strong advocate of legislation to make the Museum of African Art, which is devoted to black art and culture, a part of the Smithsonian Institution. One of the Senator's last requests to me was that I introduce this bill in his place. I am honored to do so today along with cosponsors.

The extraordinary collection of the Museum of African Art, consisting of over 7,000 objects of traditional African sculpture, textiles and artifacts, is complemented by an impressive archives of films and photos donated by the world-renowned Life photographer and Africanist, Eliot Elisofon. The museum, its archives, and higher education department are housed in a series of townhouses including and adjacent to the Frederick Douglass Home on Capitol Hill. This location enhances the museum's value as a prototype for museums as living, dynamic community resources.

The museum, which was founded by former foreign service officer Warren Robbins, has hosted over 12,000 school and community groups since its creation in 1964. Its art objects and photos have delighted students from kindergartners to postgraduates, as well as scholars, photographers, artists, and craftspersons. Most importantly, the museum has opened up a wealth of African culture to Americans of every race, age and walk of life, and continues to serve as a critically important resource for hundreds of school officials, university professors, museum personnel, and Government officials.

In addition to its fine collection, the museum conducts a vigorous education program. Its higher education department which has conducted classes through 11 universities, will offer its resources to institutions of higher learning throughout the country in the near future. The museum also participates in educational television programing and sponsors symposia and traveling exhibitions. These activities in conjunction with the collection, provide a unique interdisciplinary approach to the study and appreciation of African culture. Workshops and craft demonstrations add a dimension of participation to the tours. Children are introduced daily to African art, its symbolism and functionalism. They are allowed to put on African clothing, play African instruments, and dance African dances. The vitality of Africa comes into their lives in a very personal way through museum programs.

Senator Humphrey, ever sensitive to the role of African culture in the American black experience, chaired the first board of the museum and continued to serve as chairman of its national council until his death. He worked diligently to assist and support its programs during times of financial distress. Although the museum's operations have benefited from many generous private gifts, Senator Humphrey believed that acquisition by the Smithsonian would add permanence and stability to the programs, and recognize the museum's value by making it a national institution. Acquisition would also allow the museum to take advantage of the Smithsonian's conservation processes and techniques, which are particularly important for the priceless collection of 150,000 slides, films and photos in the archives.

For the Smithsonian, the acquisition would introduce African art, which represents one of the major art traditions of the world into presentations already rich in European, American, and Far and Near Eastern art. This is a unique opportunity to fill this gap, and the Smithsonian Regents fully favor the museum's acquisition, as indicated by their resolution which provides the following:

Voted that the Board of Regents supports the Bill "To authorize the Smithsonian Institution to acquire the Frederick Douglass Museum of African Art, and for other purposes," and requests the Congressional members of the Board to join in introducing this Bill. The Secretary is authorized to conclude an Agreement with the Trustees of the Museum for acquisition of the Museum on terms consistent with the recommendations of the *ad hoc* Committee of the Board, and to accept the deed or instrument of donation referred to in the above Bill.

Mr. President, I urge my colleagues to walk the 3 blocks from the Senate office buildings to the African Art Museum at 316 A Street, SE., for a special tour of its beautiful galleries. The exhibits speak for themselves. I also urge them to join me in cosponsoring and supporting this important legislation, not only for its unquestioned substantive value, but for the

tribute it pays to Senator Humphrey and his ideals.

Mr. President, when Senator Humphrey requested that I introduce this legislation for him, he asked that a statement he prepared be included in support of S. 2507. I ask unanimous consent that this statement be printed in the RECORD. I also ask unanimous consent that the text of S. 2507 be printed in the RECORD.

There being no objection, the bill and statement were ordered to be printed in the RECORD, as follows:

S. 2507

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SEC. 1. The Board of Regents of the Smithsonian Institution (hereinafter in this Act referred to as the "Board") is authorized to accept a deed or other instrument donating and transferring to the Smithsonian Institution, the land and impovements thereto, collections of works of art, and all other assets and property of the Museum of African Art.

SEC. 2. There is established in the Smithsonian Institution a bureau which shall be known as the "Museum of African Art" (hereinafter in this Act referred to as the "Museum"). The functions of such bureau shall be those authorized by Section 3(a).

SEC. 3. (a). For the purpose of carrying out sections 1 and 2 of this Act, the Board may:

(1) purchase, accept, borrow or otherwise acquire additional works of art or any other real or personal property for the Museum;

(2) preserve, maintain, restore, display, loan, transfer, store or otherwise hold any property of whatsoever nature acquired pursuant to section 1 or paragraph (1) of this subsection;

(3) conduct programs of research and education; and

(4) subject to any limitations otherwise expressly provided by law, and, in the case of any gift, subject to any applicable restrictions under the terms of such gift, sell, exchange, or otherwise dispose of any property of whatsoever nature acquired pursuant to the provisions of this Act; provided that the proceeds from the sale of any property acquired pursuant to section 1 shall be designated for the benefit of the Museum.

(b) In carrying out the purposes of this Act, the Board shall consider the recommendations of the Commission established pursuant to section 4.

SEC. 4. (a) There is established a Commission for the Museum of African Art (hereinafter the Commission) which shall provide advice and assistance to the Board concerning the operation and development of the Museum, its collections and programs.

(b) The Commission shall consist of 15 members to be appointed by the Board. In addition, the Secretary and an Assistant Secretary of the Smithsonian Institution shall serve as ex officio members. The Board shall appoint to the first term on the Commission no less than 10 members of the Board of Trustees of the Museum of African Art who are serving on the date of the enactment of this Act. Each initial member so appointed shall serve for a three year term. Thereafter, in appointing members of the Commission the Board shall continue to include representatives of the communities of African descendents in the United States, collectors of African Art, and scholars in the fields of African art and culture.

(c) Members of the Commission shall be appointed to serve for a three year term, except that after the appointment of the first term of the Commission as specified in subsection (b), the terms of office of members next appointed shall expire, as designated by the Board at the time of appointment, ⅓ at the end of one year, ⅓ at the end of two years, and ⅓ at the end of three years. Any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term. Members may be reappointed.

(d) A majority of the appointed members of the Commission shall constitute a quorum and any vacancy in the Commission shall not affect its power to function.

(e) Members of the Commission shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of their duties.

(f) The Commission shall select officers from among its members biennially and shall make Bylaws to carry out its functions under this Act.

SEC. 5. The Board may appoint and fix the compensation and duties of the Director and such other officers and employees of the Museum as may be necessary for the efficient administration, operation and maintenance of the Museum; the Director and two other employees of the Museum may be appointed and compensated without regard to the provisions of title 5 governing appointments in the competitive service and chapter 51 and subchapter II of chapter 53 of title 5; and all of the employees of the Museum who are serving on the date of the transfer authorized under section 1 shall be offered employment by the Smithsonian under its usual terms of employment and may be appointed without regard to the provisions of title 5 governing appointments in the competitive service and chapter 51 and subchapter II of chapter 53 of title 5.

SEC. 6. (a) The faith of the United States is pledged that upon the completion of the acquisition in section 1, the United States will provide such funds as may be necessary for the upkeep of the Museum and the administrative expenses and costs of operation thereof, including the protection and care of works of art acquired by the Board, so the Museum shall at all times be properly maintained and works of art contained therein shall be exhibited regularly to the general public free of charge.

(b) There is authorized to be appropriated for the first fiscal year under this Act, the sum of $1,000,000 and such amounts as may be necessary for the succeeding fiscal years in order to carry out the provisions of this Act.

SEC. 7. Except for the provisions in sections 1 and 6(b), the provisions of this Act shall take effect on the date of transfer of a deed or other instrument under the provisions of section 1.

STATEMENT PREPARED BY SENATOR HUMPHREY

During the thirteen years of its existence, the Museum of African Art has won international acclaim as the outstanding educational and cultural institution in the United States devoted exclusively to fostering public understanding of Africa's traditional art and its creative contributions to mankind.

Its collections of traditional African sculpture, numbering over 7,000 objects is already among the three most important museum collections in the United States; even more important, several private collections of African sculpture, valued at several million dollars would be bequeathed to the Museum if its institutional stability were assured. This bill is intended to provide that stability and continuity of purpose. These collections, if received, would make Washington unquestionably the principal center in the world for the display and study of African Art, an important fact in view of this City's large diplomatic community, the high proportion of African students in its colleges, and its 76% Black population.

The Museum, however, is even better known for its far reaching and imaginative educational program. The Museum serves as a national prototype, designed to foster mutual respect and social harmony among Black and White citizens. Some 12,000 groups from schools, colleges, church and civic organizations from throughout the United States have participated in the Museum's orientation programs. More than a million persons have already visited the Museum or participated in its extension programs, with a far greater number having viewed educational television programs emanating from the Museum.

The Museum is at one and the same time:

An art museum, providing proper representation for traditional African art, among the museums of the nation's capital;

A humanistic museum, attempting to reflect the legitimacy of the culture and values of a non-Western, pre-industrial, society;

An interdisciplinary pedagogical institution directly involved with the reorientation of public thinking concerning the cultural antecedents of contemporary Black peoples of America and the world;

A prototype project demonstrating how scientific and aesthetic insights may be utilized to define and deal with barriers to cross-cultural communication;

A resource center for teachers, students, scholars, museum personnel, educational administrators, social workers, human resources program directors, and others concerned with the Black experience and seeking assistance in their own programs to redress educational grievances;

A higher education facility for scholarly research and university teaching in the areas of African art, history, culture and museology;

An adjunct to diplomacy, being utilized increasingly by African ambassadors as "their" cultural center in America and by American foreign affairs agencies as a means of demonstrating the respect and understanding of Americans for African traditions; and

An historic house, utilized as a living museum as well as a memorial to America's greatest Black historic figure.

The United States now has the rare opportunity to acquire this Museum and cultural center, its collections and its historic buildings. The cost in Federal appropriations would be less than $1 million annually because a portion of the Museum's operating costs would be met through continued private donations and proceeds of Museum operation.

The Museum is located on Capitol Hill in the first Washington residence of the great 19th Century Black abolitionist orator, publisher and government official, Frederick Douglass. It is fitting that the Museum should be in this location where Black history and national political currents meet and mingle. It is most fortunate that our nation, through the Smithsonian Institution, can continue to house these valuable collections in this historic house and its associated and supporting facilities, for to do so is a fitting tribute to a truly great American.

The Museum's Director and Board of Trustees have been negotiating with the Board of Regents of the Smithsonian and both desire an unmistakable indication from Congress of our support. The passage of this bill will demonstrate the overwhelming endorsement by Members of Congress for making the Museum of African Art a permanent part of America's cultural heritage. In the last Congress we obtained the signature of 36 Senators and 120 Representatives in support of the Museum's acquisition by the Smithsonian. It is now time to translate that support into concrete commitments.

By Mr. LONG:

S. 2508. A bill to amend the Regional Reorganiaztion Act of 1973 to authorize additional appropriations for the United States Railway Association; to the Committee on Commerce, Science, and Transportation.

ADDITIONAL USRA AUTHORIZATIONS

Mr. LONG. Mr. President, I am introducing today legislation to amend the Regional Rail Reorganization Act of 1973 to authorize additional appropriations for the U.S. Railway Association. The legislation I am proposing would amend section 214(c) of the "3-R" Act by authorizing to the USRA $27,200,000 for fiscal year 1979. The legislation would further amend section 214(c) by eliminating the 2-year restriction on the availability of funds for the administrative expenses of the USRA and by allowing the authorized funds to remain available until expended.

The USRA is charged with the responsibilities of representing the Federal Government in the complex litigation resulting from the reorganization of the bankrupt northeast and midwest railroads and monitoring the performance of ConRail. It is important, therefore, that the association has adequate funding to carry out its important responsibilities efficiently and effectively.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2508

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 214(c) of the Regional Rail Reorganizational Act of 1973 (45 U.S.C. 724(c)) is amended to read as follows:

"(c) Association.—There are authorized to be appropriated to the Association for purposes of carrying out its administartive expenses under this Act such sums as are necessary not to exceed $27,200,000 for the fiscal year ending September 30, 1979. Sums appropriated under this subsection are authorized to remain available until expended.".

By Mr. MORGAN:

S. 2510. A bill to provide that no funds be expended on the new program on smoking and health announced by the Secretary of Health, Education, and Welfare on January 11, 1978 without specific approval by Congress; to the Committee on Human Resources.

Mr. MORGAN. Mr. President, on January 11, 1978, in a speech before the National Interagency Council on Smoking and Health, Secretary Califano announced that he was embarking in a massive new campaign to harass those individuals who have chosen to use tobacco. To obtain some of the funds necessary for this campaign, he has reprogramed money within the HEW budget. Today, I am introducing a bill which would limit his authority to reprogram funds in this instance.

I am not introducing this bill because I wish to see more people, or even the same number, smoking. The Government has the right, and indeed, should inform people of the potential health hazards that arise from smoking, and it has been doing so for many years. Since 1964, cigarette packs have had health warnings printed on them. Cigarette advertising has been banned from the broadcast media for a decade, while advertisements in the printed press also carry the Surgeon General's warning.

Furthermore, there have been a large number of publicly and privately organized antismoking campaigns. I do not believe there is any American who is not aware if the health problems that have been linked to smoking, and yet almost 40 percent of our population still smokes. And this percentage is substantially unchanged in spite of all the efforts that have been made to reduce it. Americans who smoke have made an informed choice, and having made their choice, they have a right to be free from Government harassment.

Now, Secretary Califano is proposing to throw more money down the drain because the people have not done what he wants. This campaign of his is a waste of money, and in a period of record budget deficits and an increasing number of competing demands for Federal funds, wasting money is the last thing this Government should be doing.

Judging from his rhetoric, Secretary Califano wants to use all the resources of his Department to force people to give up smoking. He seems to have forgotten that it is not his Department, but the people's. As a nonsmoker, I commend him for having given up smoking. He made an individual choice, one which every other person must make for himself.

There is a great deal of alcohol and drug abuse in this country, and both of these activities lead to much more serious health and social problems than smoking. It seems a little odd that the same man who wants the Government to harass smokers is also proposing to limit Federal activities designed to combat these more serious problems.

Nonetheless, if the Secretary wishes to institute a massive new antismoking program, he should put together a concrete and sensible plan, obtain the President's approval, and then bring it to Congress for our consideration. That is the normal and proper method for establishing new programs.

He should not do what he is doing, which is to design and implement a program without obtaining the approval of a single elected official. Congress is the policymaking branch of the U.S. Government, not the Secretary of Health, Education, and Welfare. He is an appointed official whose job is to do what he is told by the Congress and the President, and this he seems to have forgotten. My bill is a small step toward correcting this problem.

By Mr. RIBICOFF (by request):

S. 2511. A bill to restrict the possession and carrying of pistols, other firearms, and other dangerous weapons by members of the District of Columbia Department of Corrections to periods of time when they are on duty and authorized by the Director of the District of Columbia Department of Corrections; to the Committee on Governmental Affairs.

Mr. RIBICOFF. Mr. President, at the request of the Attorney General, I am introducing legislation to restrict the possession and carrying of pistols, other firearms, and other dangerous weapons by members of the District of Columbia Department of Corrections to periods of time when they are on duty and authorized by the Director of the District of Columbia Department of Corrections.

The Attorney General advises that existing statutes, as construed by the U.S. Court of Appeals for the District of Columbia, permit District of Columbia Department of Corrections officers to carry weapons when off duty, but prohibit them from carrying weapons when on duty, except for guards in work towers, on escort duty, or in emergency situations.

This bill would clarify the situation by amending the existing applicable statutes so as to clearly restrict the possession and carrying of dangerous weapons by District of Columbia correctional officers to periods when they are on duty and they are authorized weapons by the Director of the D.C. Department of Corrections.

I ask unanimous consent that the text of the bill, and the accompanying letter explaining the need for this legislation, be printed in the RECORD.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 2511

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5 of the Act of July 8, 1932 (D.C. Code § 22-3205), is amended—

(1) by deleting "prison or jail wardens, or their deputies, policemen or other duly appointed law enforcement officers,"; and

(2) by inserting in lieu thereof "or their deputies, policemen or other duly appointed law enforcement officers, or to prison or jail wardens or their deputies when on duty and authorized by the Director of the District of Columbia Department of Corrections,".

SEC. 2. Section 14 of the Act of July 8, 1932, as amended, (D. C. Code § 22-3214) is amended—

(1) by deleting "marshals, sheriffs, prison or jail wardens,"; and

(2) by inserting in lieu thereof "prison or jail wardens, or their deputies, when on duty and authorized by the Director of the District of Columbia Department of Corrections, and marshals and sheriffs,".

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C., November 11, 1977.

The VICE PRESIDENT,
U.S. Senate, Washington, D.C.

DEAR MR. VICE PRESIDENT: Enclosed for your consideration and appropriate reference is a legislative proposal "To restrict the possession and carrying of pistols, other firearms, and other dangerous weapons by members of the District of Columbia Department of Corrections to periods of time when they are on duty and authorized by the Director of the District of Columbia Department of Corrections."

The proposed legislation would amend sections 22-3205 and 22-3214 of the District of Columbia Code which, as presently drafted and construed by the District of Columbia Circuit Court of Appeals, place no limitations on the carrying of weapons by members of the District of Columbia Department of Corrections. See *United States* v. *Pritchett,*

470 F.2d 455 (D.C. Cir. 1972). Ironically, except for guards in work towers, on escort duty, or in emergency situations, District of Columbia correctional officers are not permitted to carry weapons when on duty. The present law permits them to carry and possess these weapons when *off* duty. In both the *Pritchett* case, *supra*, and another more recent case, *United States* v. *Gibbs*, D.C. Superior Court Criminal No. 21535–76, December 3, 1976, charges against correctional officers for illegally carrying a pistol were dismissed by the Court although the officers were clearly in a non-work status and not on duty.

We are advised that a number of correctional officers and employees believe that because of the nature of their employment, they should be authorized to carry guns at all times. The Director of the Department of Corrections, however, has had a long standing policy prohibiting his employees from carrying guns off duty. In fact, as mentioned above, he authorizes only a few officers to have guns when on duty. This Department supports the policy of the Director and believes the legislative authority to carry guns off duty should be eliminated. Accordingly, we recommend that sections 22–3205 and 22–3214 of the District of Columbia Code be amended.

The pertinent language of section 22–3205 presently reads as follows:

"The provisions of section 2–3204[1] shall not apply to marshals, sheriffs, prison or jail wardens, or their deputies, policemen or other duly appointed law enforcement officers, or to *members of the Army, Navy, Air Force, or Marine Corps of the United States or of the National Guard or Organized Reserves when on duty, . . .* " (Emphasis added.)

In the *Pritchett* case, *supra*, the phrase "when on duty" was restricted to those covered by the *underlined* portion above. The attached legislative proposal would amend section 22–3205 to clearly restrict the possession and carrying of dangerous weapons by members of the District of Columbia Department of Corrections to periods of time when they are on duty and authorized by the Director of the District of Columbia Department of Corrections. In addition, the proposal would amend section 22–3214 of the District of Columbia Code to clarify similar language pertaining to the carrying of machine guns, sawed-off shotguns or blackjacks.

We urge early consideration and adoption of this legislation.

The Office of Management and Budget has advised that there is no objection from the standpoint of the Administration's program to the presentation of this legislative proposal to the Congress.

Sincerely,

GRIFFIN B. BELL,
Attorney General.

By Mr. RIBICOFF (by request):

S. 2512. A bill to provide explicit authority for the arrest of material witnesses; to the Committee on Governmental Affairs.

Mr. RIBICOFF. Mr. President, at the request of the Attorney General of the United States, I am introducing a bill to provide explicit authority for the arrest of material witnesses.

The Attorney General advises that although explicit authority to arrest material witnesses was provided by Federal statute from 1789 to 1948, when Congress adopted the Federal Rules of Criminal Procedure in 1948, this explicit authority was apparently inadvertently omitted. Thus, although existing Federal and District of Columbia statutes allow for release on conditions of material witnesses who are detained in a criminal proceeding, there is no rule or statutory provision explicitly authorizing the arrest of such witnesses.

The Attorney General advises further that recent decisions of the U.S. Court of Appeals for the Ninth Circuit held that a grant of power to arrest may be inferred from the Federal Rules of Criminal Procedure, but that authority is not clear.

Legislation to clarify the situation with respect to the Federal Criminal Code is being processed by the Senate Committee on the Judiciary. The proposed legislation which I am introducing today is designed to clarify the situation with respect to the District of Columbia Code, and will provide the necessary explicit authority for the arrest of material witnesses in the District of Columbia.

I ask unanimous consent that the text of the bill and the accompanying letter explaining the need for this legislation be printed in the RECORD.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 2512

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1326 of Title 23, D.C. Code, is amended—

(a) by inserting in the title thereof "Arrest and" immediately before "release of material witnesses"; and

(b) by inserting in the first sentence thereof, immediately after "judicial officer", the following: "may order the arrest of such witness and".

SEC. 2. The item relating to D.C. Code, Section 23–1326 in the table of contents for Subchapter II of Chapter 13 of Title 23, D.C. Code, is amended to read as follows:

"23–1326. Arrest and release of material witnesses."

OFFICE OF THE ATTORNEY GENERAL,
Washington ,D.C., November 11, 1977.

The VICE PRESIDENT,
U.S. Senate,
Washington, D.C.

DEAR MR. VICE PRESIDENT: Enclosed for your consideration is a legislative proposal that will plug what is apparently an unintentional gap in the law relating to the authority to arrest a material witness.

The power to arrest a material witness was explicitly provided for by Federal statute from 1789 to 1948, *see* Act of September 24, 1789, ch. 20, § 33, 1 Stat. 91; Act of August 8, 1846, ch. § 7, 9 Stat. 73; 28 U.S.C. §§ 657, 658 (1925). However, this explicit authority was apparently dropped by inadvertence from Title 18, U.S. Code, when Congress enacted Federal Rule of Criminal Procedure 46(b). *see* Act of June 25, 1948, Pub. L. No. 772, ch. 645, § 21, 62 Stat. 862. At present the applicable Federal and District of Columbia provisions allow for the release on conditions of a material witness who is detained in a criminal proceeding, however, there is no rule or statutory provision explicity permitting the arrest of a material witness, see 18 U.S.C. § 3149, Fed. R. Crim. Proc. 46 (a) and (b), 23 D.C. Code § 1326, and D.C. Superior Court Criminal Rule 46(a)(6).

Fortunately, the Ninth Circuit Court of Appeals took note of this problem and held that "a grant of power to arrest material witnesses can fairly be inferred from Rule 46(b) and from Section 3149 as well." *Bacon* v. *United States*, 449 F. 2d 933, 937 (9th Cir. 1971); *see also United States* v. *Anfield*, 539 F. 2d 674, 677 (9th Cir. 1976). However, the *Bacon* decision candidly acknowledged that the effect of Rule 46(b) on the superseded provisions which had explicitly authorized the arrest of material witnesses" does not clearly emerge from the statutory history" 449 F. 2d at 938. In order to obviate this confusion with respect to federal law, the Subcommittee on Criminal Law and Procedure of the Senate Judiciary Committee has already reported out the proposed revision of the Federal Criminal Code, S. 1437, with an amendment which would specifically authorize the arrest of a material witness. *see* § 3505, p. 240, l. 29 of committee print. A similar statutory amendment is needed to clarify the law in the District of Columbia. Accordingly, we have developed the enclosed legislative proposal which would amend section 1326 of Title 23, D.C. Code, so as to provide explicit authority for the arrest of material witneses. Without such an amendment, law enforcement authorities in the District of Columbia will be placed in a difficult position if Superior Court judges in future cases raise the question as to what authority they have to issue arrest warrants for material witnesses. The Ninth Circuit's analysis of this issue may not persuade a judge in a given case that it is proper for him to issue an arrest warrant and the ends of Justice may be thwarted by this gap in the law.

The Office of Management and Budget has advised that there is no objection to the submission of this report from the standpoint of the Administration's program.

I respectfully urge that this proposal receive early consideration.

Sincerely,

GRIFFIN B. BELL,
Attorney General.

By Mr. RIBICOFF (by request):

S. 2513. A bill to establish the position of General Counsel in the Environmental Protection Agency; to the Committee on Governmental Affairs.

Mr. RIBICOFF. Mr. President, at the request of the Administrator of the U.S. Environmental Protection Agency, I am introducing a bill to establish the position of General Counsel in the Environmental Protection Agency at level V of the executive schedule.

According to information submitted by the Administrator, this legislation is necessary to accord the General Counsel of this Agency the status of Presidential appointment and Senate approval which is accorded to other senior officials of EPA and to other General Counsels in Federal agencies and departments with comparable responsibilities.

I ask unanimous consent that the text of the bill, together with the Administrator's explanation of the need for this legislation, be printed in the RECORD.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 2513

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be in the Environmental Protection Agency a General Counsel who shall be appointed by the President, by and with the advice and consent of the Senate, and who

[1] Section 22–3204 prohibits the carrying of unlicensed pistols or any deadly or dangerous weapons capable of concealment on the person.

shall perform such functions and duties as the Administrator of such Agency shall prescribe.

SEC. 2. Section 5316 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(142) General Counsel, Environmental Protection Agency".

U.S. ENVIRONMENTAL PROTECTION AGENCY,
Washington, D.C., October 14, 1977.

Hon. WALTER F. MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed is a draft bill "To estabish the position of General Counsel in the Environmental Protection Agency" and to provide for his or her appointment by the President with the advice and consent of the Senate at the Executive Level V.

This legislation is necessary in order to accord the General Counsel of the Environmental Protection Agency the status of Presidential appointment and Senate approval which is accorded to the other senior officials of EPA and to other General Counsels in Federal agencies and departments who have comparable responsibilities. We urge that this bill be referred to the appropriate Committee for consideration, and that it be enacted.

The General Counsel of the Environmental Protection Agency is the chief legal officer for an Agency which has over ten thousand employees, and which has regulatory and financial assistance responsibilities that are among the broadest in the Federal Government. The General Counsel is responsible for providing legal services to the Agency involving seven major environmental statutes, all of which are relatively new and all of which raise difficult and unique problems of interpretation, frequently with far-reaching implications. In addition, the General Counsel is one of the Agency's few officials with an overview of the implementation of all the Agency's programs and serves as a source of communication and coordination among Assistant Administrators and Office Directors.

The Administrator of the Environmental Protection Agency looks to the General Counsel as a personal advisor and troubleshooter as well as legal counsel. This advice involves formulating and carrying out public policy for the Administration and requires a special sensitivity to the views of the Congress, public interest groups, and industry.

Every agency in the government of comparable size or regulatory responsibility has its General Counsel appointed by the President and approved by the Senate at the Executive Level IV or V. Further, because the General Counsel of the Environmental Protection Agency works closely with General Counsels of several other agencies on several committees, it is important that he or she have a similar status within the Administration.

We are advised by the Office of Management and Budget that there is no objection to the submission of this proposed legislation from the standpoint of the Administration's program.

Sincerely yours,

DOUGLAS M. COSTLE.

By Mr. GRIFFIN:

S. 2514. A bill to amend the Coastal Zone Management Act of 1972 in order to provide financial assistance to Great Lakes States to enable the States to implement erosion management measures, and for other purposes; to the Committee on Commerce, Science, and Transportation.

GREAT LAKES SHORELINE EROSION MANAGEMENT PROGRAM

Mr. GRIFFIN. Mr. President, undoubtedly there is not a person in this Chamber who has not felt what the poet expressed when he penned:

> I know a lake where the cool waves break
> And softly fall on the silver sand.

However, the Roman philosopher Lucretius was also correct when he said, "Continual dropping wears away a stone." And if water can wear away a stone, what can—and does—it do to that silver sand?

Unfortunately, erosion is a major problem—particularly along the shores of the Great Lakes, where it is destroying miles of scenic and valuable land, as well as contaminating those beautiful waters with tons of sediment.

The U.S. Army Corps of Engineers, in cooperation with the various Great Lakes States, is conducting a study of shoreland damages along the Great Lakes for the most recent high water period of 1972–74. Although the final report from this study is not expected until next year, some preliminary conclusions have been drawn, and it appears that damages during the 1972–74 period could approach $500 million.

Meanwhile, the Great Lakes Basin Commission estimates that during the last few years high lake levels have contributed to the depositing of approximately 70 million metric tons of material into the near-shore waters annually. In fact, there have been reports of residents abandoning their homes, while losing as much as 100 feet of land in a single day.

Through the years, the subject of shoreline erosion has received periodical consideration by the Congress.

For example, in 1946 the Corps of Engineers was authorized to participate in projects for protecting shoreline properties owned by Federal and State governments or that have specified public benefits such as beach access. More recently, the Coastal Zone Management Act of 1972 (CZMA) established a national program for the management, use, protection, and the development of coastal areas by the States.

Attempts to provide disaster assistance or tax relief for individual citizens who have suffered losses as a result of factors beyond their control have not met with much success. Unfortunately, erosion in areas like the Great Lakes often affects small property owners who cannot afford to invest large sums of money in massive protective systems.

I have been advised that 82 percent of the Great Lakes shoreline is privately owned, and that 70 percent of the land undergoing critical erosion involves private property.

It is time that a way to directly assist such private property owners in an erosion management program is developed. Accordingly, today I am introducing the proposed "Great Lakes shoreline erosion management program." My colleague from Michigan, Congressman RUPPE, is sponsoring an identical bill in the House, along with other Representatives from delegations both within and beyond the Great Lakes States. Briefly, our bill involves the following features:

First. A Federal low-interest loan program to be administered by the States in order to provide loans to private owners for relocation assistance, and for nonstructural and to a lesser degree structural erosion management techniques.

Second. A Federal-State grant program established on an 80–20 shared funding process for relocating public facilities and for nonstructural and to a lesser degree structural erosion management techniques to protect the public interest.

Third. Authority for State-Federal agency consultation on erosion control structure techniques.

Fourth. Provisions for annual oversight and contingency funds for unforeseen damage.

Fifth. Allocation criteria for States based on shoreline recession rates, length, and other factors.

Sixth. An investigation to determine the extent of erosion damage related to the regulation of waters by the International Joint Commission—United States and Canada.

While erosion is a natural process, man often accelerates it. And in the case of the Great Lakes, such acceleration has been in large part as a result of Federal and international regulation—by such agencies as the Corps of Engineers and the Joint Commission—directly affecting water levels as well as other policies decided upon at the national level.

In addition, this bill would provide a measure of balance with respect to Federal benefits among coastal States by providing Great Lakes erosion control financing assistance while other States are receiving Outer Continental Shelf impact aid.

Because the Great Lakes erosion situation is not just a regional problem, but a national—and even international—one, I invite the support of my colleagues from throughout the Nation in this effort to help preserve one of our country's most valuable assets.

By Mr. HATHAWAY (for himself and Mr. WILLIAMS):

S. 2515. A bill to require Government contractors to establish and operate alcohol abuse and alcoholism programs and services, or otherwise arrange for referral to such services, and for other purposes; to the Committee on Governmental Affairs and the Committee on Human Resources, jointly, by unanimous consent.

OCCUPATIONAL ALCOHOLISM PROGRAMS UNDER GOVERNMENT CONTRACTS

Mr. HATHAWAY. Mr. President, I am pleased to introduce today legislation which would require Government contractors, as a condition of doing business with the Government to provide directly or indirectly for occupational alcoholism programs and services to their employees, or to arrange for referral of alcoholic employees to otherwise available programs and services, as deter-

mined to be cost effective for the contractor involved.

I am particularly pleased to be joined in this effort by the distinguished chairman of the Committee on Human Resources (Mr. WILLIAMS). Together we look forward to working toward seeing this proposal enacted into law.

This legislation is intended to fulfill a number of goals. First, and most obviously, it is intended to bring occupational alcoholism programs and services, which have a proven record of success and effectiveness, to a greatly increased number of individuals, in a form which will prove most beneficial to them and at the same time will prove to be cost effective to their employers. As a result, the gigantic and destructive impact which the illness of alcoholism has upon the health and well-being of our citizens, the stability of our society, and the productivity of our economy could be counteracted in an aggressive and direct fashion.

An additional benefit flowing from the adoption of cost-effective programs by Government contractors would be improved efficiency and productivity on the part of these firms, which in turn would ultimately benefit all taxpayers. Further, it is hoped that by requiring these contractors to provide a rational approach to the fact of alcoholism among their employees, they will create a climate in which other firms and businesses would voluntarily undertake similar programs.

Also, this legislation should go a long way toward clearing up confusion and controversy surrounding section 503 of the Rehabilitation Act of 1973. This bill would provide a positive tool to assist contractors in meeting the mandate of that section, and would, if properly implemented, greatly limit employers' fears about the impact of that section. That section requires all Federal contractors to take "affirmative action to employ and advance in employment qualified handicapped individuals," including alcoholics.

I shall be happy to elaborate on each of these aspects of this legislation.

NEED FOR OCCUPATIONAL ALCOHOLISM PROGRAMS

Alcohol abuse and alcoholism impose significant and increasing costs upon our economy and society. Recent estimates sanctioned by the National Institute on Alcohol Abuse and Alcoholism indicate that alcoholism results in a direct economic loss of about $20 billion in productivity annually. Total costs in terms of health care, automobile accidents, and so on, exceed $42 billion.

This figure becomes easier to appreciate when one examines various studies of the impact of alcoholism on the workplace. The National Council on Alcoholism estimates that between 6 and 10 percent of the work force is in the early middle, or latter stages of alcoholism. This represents between 6 and 10 million individuals. The NIAAA has indicated that approximately 70 percent of the Nation's 10 million alcoholics are fulfilling functions. Further, according to NCA, each alcoholic employee unless treated can be expected on the average to cost his employer approximately 25 percent of his annual salary in terms of production losses stemming from absenteeism, accidents, unnecessary scrap, and so on.

Other studies have indicated that the alcoholic employee, compared with his fellow workers, is absent 2.5 times more often, has twice the incidence of respiratory and cardiovascular diseases, and three times the incidence of digestive disorders.

Against this background, firms which have instituted occupational alcoholism programs have seen dramatic results. These programs promote early intervention and recovery before the more destructive and less reversible aspects of this progressive disease take hold. Data from a wide variety of programs indicate successful treatment and recovery in 60 to 86 percent of the individual cases, versus only 25 percent among unemployed alcoholics. In many cases treatment requirements are relatively inexpensive. One major corporation found that among 350 cases of alcoholism only 24 required inpatient treatment. Firms have documented benefit to cost ratios for such programs ranging from 2 to 1 up to 5 to 1.

While business and industry receive this kind of benefit, it is equally clear that society as a whole benefits. Along with the incremental increase in efficiency to our economy, societal costs of unemployment compensation, disability payments, medicare, medicaid, and so on are lessened to the extent that these individuals are successfully treated and returned to full productivity. Of course, other intangible, human costs associated with alcoholism would at the same time be limited. These include the human tragedy associated with auto fatalities, child abuse, and suicide.

Despite this potential, and these demonstrated results, only a small minority of our Nation's employees have such programs made available to them. At hearings held last spring by the Subcommittee on Alcoholism and Drug Abuse, it was estimated that only about 1,200 programs were then in existence. Other recent estimates go no higher than 2,400 firms.

At those hearings, which dealt with S. 1107, a bill to provide 50 percent Federal funding for occupational programs, it was pointed out time and again by witnesses that money was not really a problem in instituting these programs. All of them had shown that they paid for themselves many times over. Further, even startup costs were relatively low. The State of South Carolina Commission on Alcohol and Drug Abuse provides a basic occupational package for $2 per employee, and has under contract 94 private businesses which range in size down to 15 employees.

Rather, the apparent problem in implementation of these programs on a more widespread basis was, according to the testimony of witnesses, the stigma of alcoholism and the refusal of many in top management to seriously consider such programs, or to accept that alcoholism might be a problem among its employees.

While I would prefer that all firms voluntarily institute these programs, this inertia and its concommitant impact on the economy of our Nation and the health of our citizens calls for more direct action.

Because these programs are cost effective, and because they have a positive impact on lessening other governmental expenditures, it seems appropriate that as a matter of sound business practice the Federal Government ought to require such programs of those with whom it does business—namely Federal contractors. These firms, which total over 250,00, receive annually over $60 billion in Federal procurement contracts.

The Federal Government has a legitimate and direct interest that these firms operate as efficiently as possible in order to insure that these procurement costs do not include the costs of lost production which are otherwise avoidable.

But at the same time, I am reasonably certain that mandating these programs for Federal contractors will have a significant synergistic effect on their colleagues in business and industry, and result in an accelerated development of these programs.

SECTION 503—REQUIREMENTS AND OVERALL PUBLIC POLICY

The provisions of this bill are patterned after and intended to be complementary to those of section 503 of the Rehabilitation Act. That section enacted into law in 1973 requires Federal contractors to take affirmative action in employing and advancing qualified handicapped persons. It was Congress intention at the time of enactment of that legislation that alcoholics were to be considered within this handicapped classification. Administrative determinations confirmed this. That intention was further underlined by the regulations issued last spring by Secretary Califano of HEW with respect to section 504, requiring full participation of and barring discrimination against any handicapped individuals including alcoholics and drug abusers, solely by reason of handicap, in any activity receiving Federal financial assistance. These regulations followed a formal opinion to that effect by Attorney General Bell.

In July of this year, Assistant Secretary of Labor for Employment Standards Donald Elisburg issued a public statement reiterating that alcoholics were handicapped individuals for purposes of section 503. He pointed out at that time that the Office of Federal Contract Compliance programs received 11 complaints regarding alcoholism, and 6 more concerning drug abuse. Among these claims two of the individuals had received back pay totaling $7,500 and one individual was awarded a job for which he was previously turned down.

This principle is a sound one. As Assistant Secretary Elisburg stressed—

> Our government spends a considerable amount of money each year to rehabilitate alcoholics and drug abusers, to help them again become employable, productive citizens. It would be incongruous to turn around and deny them protection under the anti-discrimination law.

This announcement prompted a number of unfortunate and shortsighted statements. Generally, these statements

condemned this policy as tantamount to mandating that contractors must aggressively seek to employ alcoholics and drug abusers not capable of performing the work involved. Both the law and the subsequent interpretations have emphasized that such individuals must be "qualified." The law does not require the impossible, as Judge Bell's letter of April 12 to Secretary Califano pointed out:

> In sum, the statute does not require the impossible. It does not unrealistically require that recipients of Federal contracts and grants ignore all the behavioral or other problems that may accompany a person's alcoholism or drug addiction if they interfere with the performance of his job or his effective participation in a federally assisted program. At the same time, the statute requires that contractors and grantees covered by the act not automatically deny employment or benefits to persons solely because they might find their status as alcoholics or drug addicts personally offensive, any more than contractors or grantees could discriminate against an individual who had some other condition or disease—such as cancer, multiple sclerosis, amputation, or blindness—unless its manifestations or his conduct rendered him ineligible.

This opinion, and the accompanying regulations and policy statements on the part of the administration are most significant events and represent a further recognition that alcoholism and drug abuse are health problems which are preventable and treatable, and that Federal policies on a wide variety of levels ought to be mobilized toward that end. Therefore, it is most unfortunate that much of the resultant public debate has focused on strained interpretations of these affirmative action provisions rather than on developing an overall strategy to combat the underlying problems. This is particularly so with respect to alcoholism which impacts virtually every employer and every workplace. Many who assail section 503 would like to hide their heads in the sand and pretend this is not the case. While it is gratifying to know that two individuals who were discriminated against on these grounds have received some back pay, and one has been awarded a job, there remain several million more in the work force already whose not yet identified alcoholism may presently or as it progresses, render them unqualified for their work, ruin their health, and personal lives, and adversely affect their family and friends. Each of these individuals can and should be helped. Once Government contractors were forced to face up to this fact of life and initiate an affirmative program to counteract it, the affirmative action requirements of section 503 would be perceived by business to create no particular problems. They would know from direct observation that alcoholism is a preventable and treatable disease and that with appropriate programs, employees affected by this illness can be fully productive. I am confident that any firm which sets up a fully effective occupational program would have little to fear from section 503.

Implementation of a sound occupational program would foster in the employer an appreciation and understanding for the disease of alcoholism and would go a long way toward eliminating any stigma associated with it. Such employers would be in a far better position to evaluate the qualifications of each of their employees and applicants on objective performance grounds and to do their hiring and advancing on this basis.

That is really what section 503 is all about, and the new section 505 provides an overall blueprint which would insure compliance with respect to alcoholism. Further, this section would provide direct and tangible economic benefits to each firm, as alluded to earlier.

Given section 503's applicability to alcoholism and drug abuse, as well as other handicaps, one might properly inquire why this new section 505 deals only with occupational alcoholism programs, and chooses to exclude drug abuse. No discrimination is intended. I have vigorously supported and will continue to support effective treatment and rehabilitation programs for drug abusers. But to my knowledge, there has not been sufficient demonstration of occupational programs dealing with drug abuse and there is no comparable record of success and cost effectiveness. Of course, Federal contractors would be free to establish programs and policies relative to both licit and illicit drug abuse.

PROVISIONS OF THE BILL

This legislation applies to all Federal contractors and subcontractors holding contracts in excess of $2,500. It amends the Rehabilitation Act of 1973 by adding a new section 505 at the end of that act which provides a general requirement that each of these contractors must establish and operate individually or together with other employers, labor organizations, public agencies or private organizations, or consortiums thereof, appropriate prevention, identification, treatment, counseling and rehabilitation programs and services for alcohol abuse and alcoholism among its employees. Alternatively, these contractors may arrange for the referral of employees affected by the illness of alcoholism to appropriate available programs conducted by public agencies or private organizations.

These general requirements encompass a very broad range of responses which could potentially be deemed acceptable from a given contractor. But in order to provide some guidance and direction, section 2 of the bill requires the National Institute on Alcohol Abuse and Alcoholism to develop a wide variety of specific program models suitable for replication on a cost-effective basis by firms with widely different characteristics—including large and small firms, firms in major metropolitan cities and in outlying areas, firms which are able to rely on existing community facilities and programs, and firms lacking such programs. It is intended by this legislation that NIAAA create a range of options, one of which will prove attractive and feasible for each Government contractor, and which will be beneficial to the employees involved.

For example, many large industrial concerns—more than 60 of the largest 400 in the Nation—are already operating significant in-house programs with full time coordinators, counselors, and rehabilitation personnel.

Of course, this sort of approach ought not to be mandated for a small manufacturer of office supplies. If feasible, coordination of this firm's program probably ought to come from a consortium or contract approach, and community programs and facilities should be relied upon as much as possible. Likewise, paperwork and regulatory burdens should be kept to an absolute minimum. But as an absolute minimum, as delineated in section 1(a)(1)(B), every firm ought to have a mechanism in place for the referral of those employees who are identifiable as alcoholics to available programs and facilities.

In order to insure that these program models are responsive to the special needs of small business, the bill requires that the Small Business Administrator be consulted in the development of models affecting small business concerns. Throughout this process, it is intended that maximum reliance be placed on the pooling of available resources, and the development of consortiums of firms wherever feasible.

The bill also includes specific provisions with respect to model programs intended for implementation in business concerns employing individuals represented by labor organizations. These model programs shall require that, as they affect such individuals, their method of conduct, including particularly means of identifying those in need of assistance, and the scope of services provided, must flow from a mutual agreement entered into between the employer and the labor organization consistent with collective bargaining procedures.

This is intended to insure that the provisions of this legislation are consistent with and complementary to those of the National Labor Relations Act. At the same time, they are consistent with the prior experience gained in the implementation of such programs within firms whose employees are represented by labor organizations. This experience indicates forcefully that in order for such programs to work and work well they must result from joint labor-management cooperation.

The National Council on Alcoholism's Labor Management Committee, headed by George Meany, president of AFL–CIO, and James M. Roche, director and former chairman of General Motors, have provided sound and strong leadership in this regard. Their findings indicate that labor and management are ready and willing to cooperate on these matters and that better progress inevitably results from this cooperation. In this way the maximum number of employees needing assistance are reached and the greatest benefit results to them as individuals, to their families, and to their employers.

It should be noted that the provisions of this measure do not impose an increased burden upon NIAAA. Already in existing law, section 201(b) of the Com-

prehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act of 1970 stipulates:

(b) The Secretary, acting through the Institute, shall be responsible for fostering similar alcohol abuse and alcoholism prevention, treatment, and rehabilitation programs and services in State and local governments and private industry.

Consistent with this mandate NIAAA has developed some program models, and over the past few years has funded staff positions in State alcoholism agencies to attempt to encourage businesses to implement such programs. This legislation continues and expands on this mandate and is intended to make clear that Congress places a very high priority on the development of program models which are appropriate and cost effective for all types of firms.

While the problems which have in the past inhibited the widespread development of occupational alcoholism programs—most particularly stigma—will no doubt continue, a legislatively mandated emphasis on workable and cost effective programs would go a long way toward making such programs more prevalent throughout our Nation's workplace.

This bill therefore amends section 201 (b) to incorporate these features. Additionally it charges NIAAA with disseminating materials relevant to these programs to State alcoholism agencies, and providing technical assistance to such agencies. At the same time the State agencies, as part of their State plan, are required to provide assurances that they will encourage and assist businesses with the State in developing these programs. Once again these activities are ones which are already taking place in the vast majority of States, but the problem is a significantly important one as to justify statutory attention and emphasis.

While providing needed guidance to the Government contractors affected by the proposed new section 505 of the Rehabilitation Act of 1973, these amendments to the Comprehensive Alcoholism Act will at the same time be helpful to all those firms not seeking Government contracts, but which would benefit from implementation of these programs. As model programs are developed they should be shared with all who could be assisted by them. In addition, the imposition of a requirement that Government contractors establish these programs should have a substantial spillover effect on the private sector generally. As the contractors seek to establish consortiums in various parts of the country, they will no doubt enlist the support of firms in the same area who may or may not hold or seek Government contracts. In this way this legislation is intended to have a synergistic effect and result in a situation where virtually every firm ultimately will establish and maintain an effective program.

Enforcement procedures for these provisions would be virtually identical to those already established for section 503. Employees who believe that an employer has failed to live up to his contract would file a complaint with the Department of Labor's Office of Federal Contract Compliance Programs. That Office would be empowered to investigate and impose a variety of sanctions ranging from debarring a contractor from future Federal business to withholding payment or a portion of payment, to taking the contractor to court and assessing penalties based on back pay.

But with respect to compliance, the establishment and operation of any of the model programs developed by NIAAA would be deemed sufficient. Of course, these model programs are not intended to be the sole means of meeting the requirements of the new section 505, and any firm which can demonstrate that its program has been established in good faith and is directed toward meeting the needs of its employees should have no trouble with this legislation.

Also, as discussed regarding development of model programs, firms with employees represented by labor organizations shall not be required to establish such programs until the program elements are mutually agreed to by the firm and the labor organization. Again, this is to insure consistency with Federal laws and regulations affecting collective bargaining, and also to promote implementation of effective programs.

Further, in order to insure that the requirements of this legislation are not unduly onerous or riddled with bureaucratic horror, firms have the option of establishing a quite simple referral mechanism as opposed to an in-house program or consortium program. This alternative is stipulated in section 505 (a) (1) (B).

The standards contained in this legislation are very flexible and purposefully so. The record of success and accomplishment among the programs which have already been instituted is sufficiently strong to convince me that once employers are required to make a commitment to some type of program or referral mechanism and once they experience the initial positive results they will follow through aggressively for the well being of their employees and their businesses.

For purposes of compliance actions, it is important to note that section 333 of the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act of 1970 would be in full force, since these occupational programs would certainly be "regulated * * * by a department * * * of the United States." This guarantees confidentiality of individual treatment records except in narrowly specified circumstances.

The bill allows the requirements of section 505 to be waived with regard to a particular contract consistent with regulations, as long as the reasons for the waiver are stated in writing by the President. This is intended to allow some flexibility to the executive in procuring items on an emergency basis, or as required for national security reasons.

Mr. President, at the conclusion of the remarks of the Senator from New Jersey (Mr. WILLIAMS) with respect to this measure, I ask unanimous consent that there be printed in the RECORD the bill itself, along with an article on occupational alcoholism programs which recently appeared in New England magazine authorized by Mike Sheridan, titled "Contrary to Common Belief: Business and Alcoholism"; an article which appeared in the February 6, 1978 edition of the Washington Post by Stacy Jolna titled "Business, Labor Join To Battle Alcoholism"; and an article which appeared in the December 11, 1977 Maine Sunday Telegram titled "Alcoholism: A $15 Billion Problem."

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 2515

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Rehabilitation Act of 1973 is amended by adding after section 504 the following new section:

"OCCUPATIONAL ALCOHOLISM PROGRAMS UNDER FEDERAL CONTRACTS

"SEC. 505. (a) (1) Any contract in excess of $2,500 entered into by any Federal department or agency for the procurement of personal property and nonpersonal services (including construction) for the United States shall contain a provision requiring that, in employing persons to carry out such contract the party contracting with the United States shall—

"(A) establish and operate by itself or together with one or more other employers, labor organizations, public agencies or private organizations, or with consortia thereof appropriate prevention, identification, treatment, counseling, and rehabilitation programs and services for alcohol abuse and alcoholism among its employees, or

"(B) arrange by way of contract, cooperative agreement, or other arrangement for the referral of employees affected by the illness of alcoholism to appropriate available programs and services conducted by public agencies or private organizations.

"(2) The provisions of this section shall apply to any subcontract in excess of $2,500 entered into by a prime contractor in carrying out any contract for the procurement of personal property and nonpersonal services (including construction) for the United States.

"(3) In the case of a contracting party with employees represented by a labor organization, no program affecting such employees shall be established or required under the provisions of this section unless the method of conduct identification, and the scope of services of such program have been determined by agreement entered into by the labor organization and the employer through collective bargaining procedures.

"(b) If any employed person of such contracting party believes that the party has failed or refuses to comply with the provisions of his contract with the United States, relating to alcohol abuse and alcoholism programs, services and referral mechanisms, such person may file a complaint with the Department of Labor. The Department shall promptly investigate such complaint and shall take such action thereon as circumstances warrant, consistent with the terms of such contract and the laws and regulations applicable thereto. A contracting party shall be deemed to be in compliance with the requirements of this section if he institutes and maintains one of the model programs developed pursuant to Section 201 (b) of the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act of 1970, except that such

model programs shall not be the exclusive methods of achieving compliance.

"(c) The requirements of this section may may be waived, in whole or in part, by the President with respect to a particular contract or subcontract, in accordance with guidelines set forth in regulations which he shall prescribe, when he determines that special circumstances in the national interest so require and states in writing his reasons for such determination.".

SEC. 2. (a). Section 201(b) of the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act of 1970 (hereinafter referred to as the "Act") is amended to read as follows:

"(b)(1) The Secretary, acting through the Institute, shall be responsible for fostering and encouraging similar alcohol abuse and alcoholism prevention, treatment and rehabilitation programs and services in state and local government and in private business and industry.

"(2) Consistent with such responsibility, the Secretary, acting through the Institute, shall develop a wide variety of model programs suitable for replication on a cost-effective basis in different types of business concerns and state and local governmental entities, taking into account the number of employees, geographical location, proximity to other concerns and entities, and availability of existing services from public agencies and private organizations. With respect to small business concerns, the Secretary (acting through the Institute) shall consult with the Small Business Administrator in the development of model programs affecting such concerns.

"(3) With respect to business concerns and governmental entities which employ individuals representated by labor organizations, any model program affecting such individuals shall require that the method of conduct, identification, and scope of services to be provided shall be determined by agreement entered into by the labor organization and the employer through collective bargaining procedures prior to the establishment of such program.

"(4) The Secretary, acting through the Institute, shall disseminate information and materials relative to such model programs to single state agencies designated pursuant to Section 303 of this Act, and shall provide technical assistance to such agencies as requested."

(b) Section 303(a) of the Act is amended by—

(1) redesignating paragraph (16) as paragraph (17); and

(2) by inserting immediately after paragraph (15) the following:

"(16) Provide assurance that the State agency—

"(A) will foster and encourage the development of alcohol abuse and alcoholism prevention, treatment and rehabilitation programs and services in state and local governments and in private businesses and industry;

"(B) will make available to all business concerns and governmental entities within such State information and materials concerning such model programs suitable for replication on a cost-effective basis as developed pursuant to Section 201(b); and

"(C) will furnish technical assistance as requested to such business concerns and governmental entities.".

CONTRARY TO COMMON BELIEF: BUSINESS AND ALCOHOLISM

(By Mike Sheridan)

Drinking employees are driving up the cost of doing business in New England. The alcoholic worker—who is frequently late for work, absent several days per month, and who repeatedly makes on-the-job mistakes—is costing business and industry in the six-state region $500-million a year, officials estimate.

Alcoholics on the job are no longer confined to just one or two workers. An estimated 4.5-million alcoholics are employed in industry today—roughly 5% of the nation's work force, reports the National Council on Alcoholism (NCA).

Benjamin H. Ticknor, a field consultant for NCA, believes that industry must be charged with the responsibility of the disease because government is supported by taxes on alcohol—to the tune of some $15 billion yearly. "We have an alcohol-supported government," Ticknor says. "The government may pay lip service, but the paltry $100-million they throw at it isn't going to do any good. Industry has the clout—through the payroll, through their ability to talk from an authoritative standpoint. There's a morale factor, too. After all, a man has one half to two thirds of his life tied up in business."

The cost of keeping an alcoholic employee on the payroll, experts estimate, is 25% of the worker's annual wage. Research groups have said that cost averages out to $2,500 a year per alcoholic employee.

"It's dearly costing the company that ignores the problem," says Charles Pilkington, of the Special Services Division of Pratt & Whitney Aircraft Group, the largest employer in Connecticut. "The problem exists and must be reckoned with."

On the average, each alcoholic employee loses 22 days of work a year as the result of his drinking and its physically debilitating results.

Studies show that, compared with the norm, alcoholic employees:

Function at 67% of their work potential.

Have an accident rate three times higher.

Are involved repeatedly in grievance procedures.

File five times more compensation claims.

Ticknor emphasizes the alcoholic cost at the highest level of management is the most damaging. "It's my belief that the biggest cost of all is bad decisions to cover up, and I am more aware of this because I was in an executive position as an alcoholic. Alcoholics hide, they make bad decisions. You've got to keep hitting at the executive branch of business," Ticknor, who was president of Industrial Molasses Corp. for 35 years, now owns a guest house in Dublin, N.H., that caters to the recovering alcoholic.

Ticknor relates from his own experience the typical alcoholic's day: "The alcoholic starts the morning sick and dull. After a martini lunch he sparkles, maybe attends a meeting . . . has lots of great ideas. Then he begins to tire, starts needing another drink. . . . He says, "Let's get the business over,' before all the evidence is in. That's when the bad decisions come in. He's apt to call the meeting off, walk out before the meeting is over."

Moreover, Ticknor says, the drinking executive can be a great stumbling block in the company's attempts to treat alcoholics. "He will pooh-pooh the program," Ticknor explains. "He doesn't want it. It may interfere with his drinking."

Who is the alcoholic employee? Contrary to common belief, the problem drinker is not the skid-row bum. Studies show him to be a skilled or semi-skilled person, varying in age from 35 to 50, who has been at least seven years with the company, married, owns his own home, and usually has two or more children. In short, he is a respected member of the community.

"There is no typical alcoholic," says one business executive. "If you accept the concept that alcoholism is a disease, then a disease knows no boundaries. It can't read a paycheck or an address."

No business or industry is immune to the alcoholic and the cost of his addiction; and small businesses often have more to lose than large corporations. But it is the large company which has taken the initiative in alcohol treatment.

Fred Stevens, coordinator of special services for Textron, Providence, R.I., is a direct man with a down-to-earth approach. "It's called special services," he says with a grin, "but it means alcohol."

Stevens' job takes him all over the country, to Textron's many divisions, working to set up alcohol-treatment centers in each of the plants.

"I can walk into a place and say, "How many alcoholics do you have?" and they'll say, 'Well, out of so many, we've only had three people hospitalized for alcohol in the past five years.'

" 'Three!' I'll say. 'That's not many. Well, what other illnesses are on the record for those three people; gastroenteritis, nervous anxiety, and non-surgical back pain, right?'

" 'How did you know? Did you see the records?'

" 'No, I didn't see the records. Now look and see how many were hospitalized for those things. . . .'

"I know," Stevens says bluntly. "I used to go to the doctor and say, 'Doc, you've got to give me something. . . .' and he'd prescribe something for gastroenteritis. Now that's not saying that everybody with gastro is an alky. . . .

"We checked the records on drinking people. At a minimum he's hospitalized three times. Seven at the maximum. He takes 35 weeks off during a three-year period. Now, the man looks at that figure and says, 'No, Fred.' But what he doesn't realize is that doesn't mean a week off at a time. That's a day here, a day and a half there . .

"The executive can get away with it. If the employee takes the day off, he gets docked. An executive says, 'I'm going to Boston for a few days,' and nobody questions him. He could be around the corner, dead drunk in a hotel room, and nobody would know the difference. . . .

"I think half the time psychiatrists hurt more than they help. They give people excuses to drink. What difference does it make if you've got a problem mother—everybody's got problems. . . . Your problem is alcohol, and there's only one way you can handle the problem: Don't drink."

Alfred Van Sinderen, president of the Southern New England Telephone Co., estimates that the more than 600 alcoholics in the firm will cost SNET $500,000 this year. "Alcoholism is a very strange disease," Van Sinderen explains. "People who have it don't want to admit they do. They don't want to be cured. They don't want to be helped. Only people who are recovered alcoholics really understand the nature of the illness."

James S Kemper, Jr., president of the Kemper Insurance and Financial Companies, says employers who say they have no problem drinkers in their organizations are similar to the employed alcoholic who insists he has no drinking problem. "Neither is facing the realities of the situation," Kemper says. They are alike, too, in that both are paying a heavy and needless penalty for their illusions. According to our studies, the most expensive way to handle the problem drinker is to fire or ignore him or her, the most profitable and effective way is to help the employee recover."

Paul McGuide, of Century Brass, agrees, saying a firm gains nothing by firing alcoholic employees upon discovery. "A firm has an investment in the employee and has spent time in training him," says McGuire. "With a little bit of effort the employee will, hopefully, recover. If the worker is fired, he'll probably go away and get another job, and then it's someone else's problem."

A good recovery program, on the other hand, may have a success rate of 50%–70%. "Why sure!" Ticknor concurs, emphatically.

"A recovering alcoholic is one of your most valuable employees. He's a worker . . . he's got a conscience."

But fear of losing jobs forces many alcoholics to "mask" their problems while on the job. Thus alcoholism is detected only in its very late stages where chances of recovery are minimal.

"A social stigma has been attached to alcoholism," relates Frank O'Callaghan of the Massachusetts Council on Alcoholism. "For a long time, alcoholism was viewed as being symptomatic of other problems. People felt that if those problems were cleared up, the drinking would too."

Steps have since been taken to place alcoholism in the proper light. In 1956 the American Medical Assn. classified alcoholism as a disease. It is now viewed as a medical problem rather than a moral one by the insurance companies as well.

As alcoholism among industry employees spread, a few large corporations such as Kodak and DuPont—sensing the physical and financial losses from alcoholic employees—tried to do something about it. The firms pioneered occupational alcoholism programs to identify and to assist persons with alcohol-related problems. A large percentage of alcoholic employees were successfully rehabilitated.

But Ticknor says that some progress in the private sector has been discouraged by government funding. "Since the federal government has come into this, grant money is so free that people think "we don't need the private sector. But what it did was disrupt the private sector. With government money, you spend half your time reporting what you did with it, half the time getting the money. You end up with a lot of little bureaucracies."

The success of some private programs, however, has been encouraging:

One study of 25 alcoholics at General Motors Corp., based on one year's comparison before and after enrollment, showed 66% reduction in lost man-hours, 59% reduction in sickness and accident benefits, 39% reduction in on-the-job accidents, and 25% reduction in medical department visits.

At the former Scovill Manufacturing Co. (now Century Brass Products), in Waterbury, Conn., officials estimated several years ago that they saved $165,550 over a three-year period through their alcohol treatment programs.

A comparative study of 402 employees at Illinois Bell Telephone Co.—five years prior to referral against five years after referral—showed a 46% reduction in sickness disability resulting in savings of $459,000, and a rehabilitation rate of 72%.

Officials at the Kennecott Copper Co. found sickness and accident costs for identified alcoholics, compared with the average, to be more than 5 to 1; hospital, medical, and surgical costs were more than 3 to 1. After a year into the program, hospital, medical, and surgical costs decreased 55%.

Insurance companies have estimated that for every dollar spent in rehabilitating the alcoholic employee, $5 will ultimately be saved.

How does an alcoholism treatment program "save" money?

To illustrate the benefits of an occupational program, the Massachusetts Council on Alcoholism uses as an example a fictional company which employs 1,000 individuals at an average annual wage of $10,000. Since an estimated 5 percent of the workers are alcohol abusers (50 employees), the payroll for alcohol abusers would be $500,000.

The alcoholic employee will be absent more often, have more accidents, and will file more compensation claims—so the company will spend 24.8 percent of the employees annual wage additionally. The cost of alcohol abuse in the company, then, is $124,000.

During the first year of operation, an occupational program will deal with 20 percent of the alcohol abusers. Thus, in the fictional company with 50 alcohol abusers, 10 would be identified and offered assistance during the first year.

Since the company aiding the individuals is no longer spending the 24.8 percent that was the cost of their unidentified alcoholic abusers, it will realize a reduction in added operation cost of $17,360.

Training costs for supervisory personnel would be about $1,800, while educating employees about the program would cost $1,120, and treatment of the 10 individuals would run about $8,000. But most group health insurance policies will, after $100 deductible, cover 80 percent of the treatment costs. So, the net treatment cost for the 10 identified alcoholic individuals would be $2,400.

Thus, the total cost of running the first year program would be $5,320.

Subtract $5,320 from the reduction of operating costs mentioned previously ($17,360), and the first year net reduction in operating costs is $12,040, representing a savings equal to 2.26 times the cost of the program generating the savings.

During the first year of its program, Pratt & Whitney Aircraft saved $500,000, Pilkington reports. "Saved" is a misnomer, he adds. "I prefer to call it a 'cost avoidance'—you avoid extra costs for absenteeism, sick benefits, and the like."

The company received $3.72 in cost avoidance for every dollar PWA expended in the alcoholism treatment program, and during its first year, 451 persons were referred for treatment.

One of the problems a firm is faced with is training the supervisors in such a program. Ticknor believes that a valuable resource is being overlooked in company personnel directors.

"The personnel director is looked upon as a sort of rubber stamp in some companies, a hirer and firer of the lowly . . . While if there's a real problem, they go to the vice-president. Actually, he's the only one of the company who can speak to everyone."

Because of the daily contact, a supervisor is also in an excellent position to spot drinking problems. And a supervisor has legitimate, explicit expectations for the employees in the performance of their roles without slip-ups.

Part of the problem is getting the employee to admit to the drinking problem and to realize that alcohol is affecting his job. Personnel try to point out that problems at work would probably go away if the alcohol problem were cleared up.

Ticknor says that many companies are now implementing what is called a "troubled persons program." It may deal with problems ranging from athlete's foot to an overspending wife, he says, "but it is there that the alcohol problems surface. Eighty-three per cent of the problems turn out to be alcohol-related."

However, it is usually on the basis of job performance—not alcohol—that the employee is confronted.

Joseph Sheehan, occupational consultant for the Connecticut Alcohol Council, says that confronting the employee is the difficult part of the rehabilitation process. "No matter how you cut it, there has to be a confrontation," he continues. "Supervisors may postpone it because it's a difficult thing. But it has to happen."

Because of the confrontation factor, Pilkington reports, gaining acceptance from supervisors is far from easy. "We had to show them the program was good, and that we would not only be helping the employee, but also the supervisors," says Pilkington. We pointed out that with less employee absenteeism and better productivity, it would make the job easier.

If an employee persists in drinking, the company's course is obvious. After trying to persuade the employee to accept treatment, PWA's Pilkington says, "It's like you've got a broken hand and don't want to get it fixed. We're going to send you home."

"If an employee fails to take advantage of the offered treatment plan at Century Brass," says MGuire, "that worker is eventually dismissed because of poor work performance."

At Century Brass, however, the company will take the dismissed worker back after a year as a probationary employee, and will give the recovered employee one third of the benefits due him.

"For some," says McGuire, "it is the jolt they need. . . ."

[From the Washington Post, Feb. 5, 1978]

BUSINESS, LABOR JOIN TO BATTLE ALCOHOLISM

(By Stacy Jolna)

A telephone lineman in Michigan with a penchant for blended whiskey has curtailed his drinking—and his absenteeism—and is back on the job after a brief stint at a detoxification and counseling center. Bell Telephone Co. sent him there and paid the bill.

Standard Oil Co. of California is treating one of its executives for a bad case of too many martini lunches—before the martinis became more important to him than the job.

At the State Department, an administrator's secretary has been referred to a special alcoholism program within the agency to find out if her drinking habit has anything to do with her tardiness habit. The treatment is confidential and free—courtesy of the federal government.

Throughout the country, business, government and labor are joining forces to fight alcoholism where it usually can be indentified first, on the job. And both management and labor are finding that a company program designed to treat employees with drinking problems is mutually beneficial.

"It's good for the individual because it returns him to a position as a respected member of his family and helps him to become a productive member of society again," said Dr. Ruth V. Karrh, medical director of the Du Pont Co. and a director of the National Council on Alcoholism. "From the company's standpoint, we are able to benefit from resumed productivity of a trained individual who has been a good employee and has every expectation of again being a good employee."

Alcoholism's cost to society in 1976 was $43 billion, including about $20 billion in lost productivity and wages and $12 billion in health and medical costs, according to the U.S. Department of Health, Education and Welfare's National Institute on Alcoholism and Alcohol Abuse (NIAA). About half the alcoholics in the United States, or about 5 million persons, are employees.

At least half of those referred are helped, with some companies reporting recovery rates as high as 80 percent, according to Dr. Paul Sherman, president of the Association of Labor, Management, Administrators and Consultants on Alcoholism and director of occupational alcoholism programs at International Telephone & Telegraph Co. in New York.

A recent General Motor Corps, study shows decreases of 50 per cent in lost work hours and 30 percent in health problems among employees treated for alcoholism. And an Oct. 31 report of the NIAA shows that, among employees treated at International Harvester Co., there were reductions of 40 per cent in absenteeism and 50 per cent in disability payments.

Du Pont was the first company in the nation to realize the corporate benefits of an occupational alcoholism program. It instituted the first program of its kind in 1942, closely followed by Eastman Kodak.

Today, the list of businesses and industries with occupational alcoholism programs reads

like a who's who of the New York Stock Exchange.

The largest company in the country, the federal government, also mandated occupational alcoholism programs for federal employes in 1951 with the same legislation that created the NIAA.

"We use the job as the lever to get the alcoholic to face the problem and do something about it," said Dr. Sherman, a psychologist and recovered alcoholic. "The employee (at ITT) is given a choice: If his performance drops to an unacceptable level and he is not responding to corrective measures, he will either accept a referral to the alcoholism program or risk being fired."

Dr. Sherman noted that years before a drinking problem appears, there is a marked decline in job performance.

"By keeping the focus on performance, then anything that relates to productivity can be referred," Dr. Sherman said. "We find we are also picking up an equal number of other problems, like emotional and family problems which can lead to alcoholism."

Many of the companies have special training programs to alert management personnel and union shop stewards to the correlation between a drop in productivity and possible alcoholism.

"If performance drops at all, they just talk to the person," Dr. Sherman said. "We tell the supervisors if you've tried talking to the employe and it happens again we refer the person to the program."

Dr. Sherman said there is very little stigma attached to the program because all medical records are kept confidential and separate from personnel files. In most cases, in fact, the employe is not treated at the company but is referred to some outside source.

However, despite the apparent benefits of occupational alcoholism programs to both management and labor, Sherman said of the nearly 1200 companies that have programs, only about 300 currently are working well.

Donald Phillips, U.S. Civil Service alcoholism and drug abuse program manager, said the program has "treated 30,000 employes since 1972, and about 75 percent of all federal employes are covered by the programs.

"Some of our programs are highly effective like the one in the Government Printing Office. Some of them are just paper programs.

"What we have is a resource problem—no money and no personnel to administer these programs," Phillips said.

[From Maine Sunday Telegram, Dec. 11, 1977]

ALCOHOLISM: A $15 BILLION PROBLEM

NEW YORK.—Excessive drinking on and off the job is costing American industry at least $15 billion a year, according to authoritative studies.

Until just a few years ago, a businessman might say, "We don't have any problems with alcoholics—we fire them."

But with alcoholism recognized more widely as a disease—it ranks second only to heroin as a killer addiction—emphasis has turned to seeking cures beyond the instant panacea of dismissal.

The $15 billion figures comes from a special report to Congress by the National Institute on Alcohol Abuse and Alcoholism, prepared with the help of the Harvard School of Public Health. And the report said the figure probably was conservative.

Drinking to excess is not just a problem in itself. There also is the difficulty of making people think about it.

More than 100 million Americans are classified as "drinkers"—that is, people who take more than one drink in a year. Of those, an estimated nine million have had some kind of problem with their family, employment or the police because of drinking.

Does that make them alcoholics?

Possibly but not necessarily. Experts are leary of offering clear-cut definitions because two drinks might impair the faculties of one person while 10 drinks will leave another relativ-ly sober.

"Sure I drink, but I can handle it," is the classic response of the drinker who does not want to admit that he or she might have a problem.

One former alcoholic says, "You have to admit you're an alcoholic and decide if you want to live. It's your choice day by day."

Apart from the generally recognized organizations like Alcoholics Anonymous, there are today more than 1,200 occupational alcoholism programs in America, many of them set up by companies intent on recovering useful workers otherwise lost to them.

The heavy machinery manufacturer Deere & Co. of Moline, Ill., sees the problem, has analyzed it and offers help.

"Unfortunately it's difficult for a nonalcoholic to understand that alcoholism is a disease, just like diabetes," said Tom Riley, Deere's alcohol and drug abuse counselor.

"We're concentrating on a disease that, if it had any other name, would create a national panic," he said.

"When you add the number of heart attacks in which alcohol is a secondary cause, plus the number of car accidents—68 percent of highway fatalities are alcohol related—then alcohol becomes this country's number one killer . . .

"Yet no one alive today can even define alcoholism, much less know its causes."

Riley knows. He is a recovered alcoholic who has not had a drink in 22 years.

"The tragedy is that we can't do anything unless the employee's work has deteriorated substantially," Riley said. "I can't call him in and say, 'Listen Joe, I've heard you're drinking too much.' He'd have every reason to resent my interfering with his personal life."

So at Deere it's up to the supervisor to look out for the tell-tale signs of absenteeism, chronic lateness, lack of coordination and concentration and unhealthy appearance.

"After a verbal warning, if the employee's work doesn't improve he's brought before a committee of two company and two union officials," Riley said.

Deere will offer a wide range of counseling, treatment, financial help and even hospitalization to help an alcoholic employee.

Many other companies have the same kind of program.

The Kemper Insurance & Financial Co. was a pioneer back in 1964 and this year won an award from the Association of Labor-Management Administrators and Consultants on Alcoholism for the outstanding nature of its personal assistance program.

ALMACA serves as a forum for the exchange of information on occupational alcoholism programs and has more than 1,000 corporate and labor union members.

According to ALMACA: on-the-job alcoholism programs are the most effective way to help, motivate and refer the alcoholic to treatment.

"It has been demonstrated that between 40 and 60 percent of job performance problems relate to alcohol abuse and alcoholism," a spokesman said. "If these problems are caught in the early stages there have been recovery rates of between 50 and 80 percent."

The National Council on Alcoholism favors in-company programs as "the most promising way of treatment."

But everyone warns that alcoholism as such cannot be cured—it can only be treated and controlled.

Jules Saltman, writing in a pamphlet published by the Public Affairs Committee titled "The $15 billion Hangover," lists various methods of treatment:

—Detoxification: Usually requires hospitalization and use of sedatives and other drugs to control the pains of withdrawal from chronic depedence on alcohol.

—Drug Treatment: There are no "miracle drugs" that cure alcoholism, but some can be of use to a drinker who needs the support of a chemical fence between himself and alcohol. On the whole drug treatments have worked well only when used together with psychological therapies.

—Analysis: In many cases analysis can succeed if a committed and determined therapist maintains trust through all the backslidings and deceits the patient will probably practice in the course of a long treatment.

—Group Treatment: The most successful single treatment program of all is the group therapy practice at Alcoholism Anonymous.

—Behavior Modification: One technique used is aversion therapy, which attempts to change a taste for alcohol into a violent dislike by a conditioned reflex. For example, electric shocks administered at the moment of drinking becomes associated with drinking and can make drinking distasteful. Placing frogs or worms in an alcoholic's drink can have the same effect.

An industrial alcoholism program usually will not get involved in any of the above. Employers generally seek to pinpoint the problem but then will refer the drinker to outside help.

An employer has leverage few others can impose: The strong motivating force, in the view of some experts, that a drinking worker will try to hold on to his job even when almost everything else—family, friends, money—has already been lost.

Labor unions endorsed industrial alcoholism programs wholeheartedly because they prefer to see their members treated rather than fired.

Saltman said spreading the word on sympathetic and effective treatment of working alcoholics still has a long way to go, but added:

"Employers, as well as employees and unions, have learned that the problem of drinking on the job is too big to be ignored—if only on strictly economic grounds, not to speak of humanitarian concerns."

Mr. WILLIAMS. Mr. President, I am happy to join with the chairman of the Subcommittee on Alcoholism and Drug Abuse (Mr. HATHAWAY) in sponsoring an amendment to the Rehabilitation Act of 1973 to require Government contractors to provide alcohol abuse and alcoholism programs and services for their employees. It is our hope that this legislation will hurry the spread of occupational alcoholism programs which have proved to be so successful.

My interest in controlling the impact of alcohol abuse and alcoholism is of long standing. As early as July of 1969 I participated in 3 days of hearings on alcoholism held by the Subcommittee on Alcoholism and Narcotics—now the Subcommittee on Alcoholism and Drug Abuse—on which I have served since its creation in May of that year. At those first hearings of the subcommittee we heard compelling evidence of the effectiveness of occupational alcoholism programs. These programs—in the few companies in which they then existed—had not only proved themselves effective in saving human lives but cost effective as well.

As a result of those early hearings, the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment and Re-

habilitation Act of 1970 required the Civil Service Commission to develop and maintain appropriate prevention, treatment, and rehabilitation programs and services for alcohol abuse and alcoholism among Federal civilian employees. It also required the Secretary of Health, Education, and Welfare, working through the National Institute on Alcohol Abuse and Acoholism (NIAAA) to foster similar programs and services in State and local governments and in private industry.

Mr. President, the need for these programs is obvious. As of January 1977, nearly 87 million Americans were in the Nation's work force. The lowest, most conservative estimate indicates that some 4.5 million of the estimated 9 to 10 million Americans with alcohol problems are in the work force.

NIAAA estimates that the cost of alcohol abuse to our society exceeds $42 billion annually. The cost in lost production alone is estimated at $19.64 billion. Alcohol abuse is also known to contribute greatly to the incidence of industrial accidents, aviation accidents, traffic accidents, drowning, fire burns, falls, as well as to crime, suicide, and family abuse.

The greatest obstacle to getting an afflicted person into effective treatment is his denial system and consequent lack of motivation. The alcoholic can lose family, home, driver's license, and still cling to the hope that he is not an alcoholic. However, when alcohol has begun to affect job performance, the threat of job loss can provide the necessary motivation. The alternative of a treatment program suddenly becomes much more attractive. The occupational alcoholism program can steer the employee into the appropriate treatment and provide the monitoring and followup so vital to success.

Occupational alcoholism programs have proved to be successful. The National Council on Alcoholism (NCA) has reported that most companies that have an occupational alcoholism program report long-term, stable recovery rates ranging from 60 percent to 80 percent.

The following recovery rates are quoted in Joseph F. Follmann Jr.'s book, "Alcoholics and Business," published in 1976 by AMACOM, a division of the American Management Association:

DuPont, 66 percent; Hoerner Waldorf Corp., 60 percent; Honeywell, Inc., 60 percent–70 percent; United California Bank, 70 percent; Teamsters Union (Portland, Ore.), 76.7 percent; Standard Oil of Oregon, 86 percent; Eastman Kodak, 75 percent–80 percent; Metropolitan Life, 60 percent; Hughes Aircraft, 60 percent; Caterpillar Tractor, 60 percent; Scovill Manufacturing Co., 78 percent; Illinois Bell Telephone Co., 72 percent; General Motors, 80 percent; Raytheon Company, 80 percent; Philadelphia Police Department, 85 percent.

Occupational Alcoholism programs have proved to be cost effective. NCA estimates that each alcoholic employee costs his employer an amount at least equal to one-quarter of his annual salary in hidden losses such as absenteeism, tardiness, spoiled material, excess scrap, declining production, accidents, et cetera. NCA quotes the following:

The U.S. Postal System has reported (since the inception of its PAR program which started in San Francisco in 1968) an annual saving based on one quarter of each recovered alcoholic employee's annual salary. These reports have undergone three complete Federal audits, two by the General Accounting Office and one by the Inspector General's Office. A special study by the Postal Service found that savings per employee on paid and unpaid sick leave only amounted to $1,969 per employee per year. The study noted that no attempt was made to measuring loss of productivity, use and cost of health benefits, loss of time due to disciplinary action, training and turnover of employees or accident rates.

The New York Transit Authority made a study of 1,600 individuals who had been through the program. Only one item was considered—paid sick leave. On that item alone, the TA was then saving more than $1 million per year in that group.

Early returns from the General Motors program show reductions of 85 percent in lost man-hours; 72 percent in dollar amount of accident and sickness disability benefits paid; ¢6.7 percent in number of sick leaves taken.

An independent study of the Oldsmobile program in Lansing, Michigan, showed reductions of 56 percent in numbers of leaves of absence; 78 percent in numbers of grievances; 63 percent in numbers of disciplinary cases and 82 percent in on-the-job accidents among the employees who had been through the program.

Allis Chalmers reported in a study made by the National Industrial Conference Board in 1958, that its program had achieved a reduction of 70 percent in absenteeism and 61 perment in tardiness among employees who had been through the program.

In the same study, Consolidated Edison (of New York) reported a reduction of more than 67 percent in absenteeism among employees who had been through the program.

In a limited study, Bechtel Corporation pinpointed a cost savings of 25.5 percent of the total annual pay of individuals who had been through the program.

In a study of absenteeism, made in connection with the Kelsey-Hayes program, it was found that absenteeism among alcoholic employees was four times that of the plant average. Calculated in terms of lost income at an average rate of $5.15 an hour, each alcoholic was losing $2,627 per year. Since Kelsey-Hayes had to replace these individuals at comparable pay and/or time-and-a-half, the cost to the company was even greater, the study notes.

Mr. President, there is little reason to doubt that occupational alcoholism programs are the most promising mechanism through which alcohol problems can be identified and managed. Let us look more closely at the Program for Alcoholism Recovery (PAR) run by the U.S. Postal Service.

Assistant Postmaster General Paul N. Carlin, in testimony before the Subcommittee on Alcoholism and Drug Abuse, stated that the Postal Service was one of the forerunners in the development of programs within Government for the recovery of alcoholic employees. In 1968, while the climate for such programs was not generally favorable, the first PAR office opened in the San Francisco Post Office.

The first PAR office successfully demonstrated that alcoholism was a postal problem, and equally important, that something could be done about it. Additional PAR offices were opened in Chicago and Boston in 1970; and after an internal audit showed that the program was avoiding $4 in cost for every $1 invested, PAR began to expand on a nationwide basis. Subsequent audits have demonstrated that PAR remains a good investment for the Postal Service.

The PAR report for accounting period 6 of fiscal year 1977—from February 26 to March 25—indicates that PAR was available to 389,410 postal employees, including an estimated 31,145 problem drinkers. PAR enrollment was 6,303 clients, of which 5,828 showed improvement. Estimated savings for this period—calculated on the basis of the standard GAO cost factor of 25 percent of a problem drinker's salary—was $1,661,-051. Over a year, this would amount to a net saving of $17,699,563, after deducting the cost of the program. This translates into a cost avoidance ratio of almost $5 for every $1 spent.

Of the more than 10,000 employees who have participated in PAR, between 75 and 80 percent are recovering, and less than 10 percent have left the Postal Service. The social and humanitarian benefits to the employees helped by PAR, and to their families and communities, extend far beyond the financial savings the program has produced for the Postal Service.

Mr. President, last spring, in an effort to encourage the spread of occupational alcoholism programs, I joined with the Senator from Maine (Mr. HATHAWAY) in sponsoring the Occupational Alcoholism Prevention and Treatment Act of 1977 (S. 1107). That bill would provide Federal assistance of up to 50 percent of the costs to employers, labor organizations, and other groups to establish and operate occupaticnal alcoholism programs.

Subsequent testimony on that proposed legislation indicated that financial incentives alone might not be sufficient to encourage employers to provide such programs. Thus we are taking this new approach, requiring government contractors to provide occupational alcoholism programs for their employees.

This decision is based in part on testimony on S. 1107 at hearings held in Washington in May of this year. Dr. Paul Sherman, president of the Association of Labor-Management Administrators and Consultants on Alcoholism (ALMACA) testified that it is false to assume that lack of funding is a primary reason why there are so few programs. He believes there are two basic reasons for the relatively small number of programs.

First. The stigma. The stigma leads one to have the concept of the alcoholic as the skid row bum, and if one looks within a company or labor union only for the skid row bum, it is easy to say "We don't have much of a problem here." This in turn leads to the second problem, namely, that the need for an occupational program is given.

Second. A low priority. This is the major problem with which we are dealing. There are many real priorities that executives in corporations and labor leaders face, and the priorities shift from day to day. Dr. Sherman claims that what is needed is a vehicle to in-

fluence the top executive to say "This is important. Let us do it."

Dr. Sherman urged that a way be found to mandate such programs. The bill which Senator HATHAWAY and I are introducing today provides that mandate. It would:

Amend the Rehabilitation Act of 1973 by adding a new section 505 entitled "Occupational Alcoholism Programs under Federal Contracts."

Require that any Federal procurement contract in excess of $2,500 must contain a provision requiring the contractor to provide occupational alcoholism programs.

Stipulate that these provisions also apply to subcontractors holding contracts in excess of $2,500.

Provide that when employees represented by a labor organization, the program be determined by agreement entered into by the labor organization and the employer through collective bargaining procedures.

Provide an enforcement mechanism whereby an employee of the contractor who believes that the provisions of his contract with respect to these programs are being violated may file a complaint with the Department of Labor.

Allow the President to waive the provisions of this section with respect to a particular contract, pursuant to regulations he prescribes, when special circumstances in the national interest so require.

Amend section 201(b) of the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act of 1970 to:

Require the Secretary of HEW, acting through the National Institute on Alcohol Abuse and Alcoholism, to develop a wide variety of model programs suitable for replication on a cost-effective basis.

Provide that business concerns and governmental entities which employ individuals represented by labor organizations, the program be determined by agreement entered into by the labor organization and the employer through collective bargaining procedures.

Require the Secretary, acting through the Institute to disseminate information and materials relative to such model programs to single State agencies.

Amend section 303(a) of the act to:

Provide assurance that the State agency foster and encourage the development of such programs and services in State and local governments and in private business and industry;

Make available to all business concerns and governmental entities within such State information and materials concerning such model programs;

Furnish technical assistance as requested.

Mr. ROBERT C. BYRD subsequently said: Mr. President, I ask unanimous consent that S. 2515, a bill introduced earlier today by the Senator from Maine (Mr. HATHAWAY) be referred jointly to the Committee on Governmental Affairs and the Committee on Human Resources.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSORS

S. 724

At the request of Mr. THURMOND, the Senator from Colorado (Mr. HART) was added as a cosponsor of S. 724, a bill to amend title 10, United States Code, to provide for the payment of survivor annuities to widows of certain members of the uniformed services who died before the effective date of the survivor benefit plan.

S. 1393

At the request of Mr. BAYH, the Senator from Massachusetts (Mr. KENNEDY) was added as a cosponsor of S. 1393, a bill to protect the rights of institutionalized persons.

S. 2353

At the request of Mr. KENNEDY, the Senator from South Dakota (Mr. MCGOVERN), the Senator from Iowa (Mr. CLARK), the Senator from New York (Mr. MOYNIHAN), and the Senator from Rhode Island (Mr. PELL) were added as cosponsors of S. 2353, a bill to amend the Foreign Assistance Act of 1961, to provide Indian cyclone rehabilitation and reconstruction assistance.

S. 2360

At the request of Mr. MOYNIHAN, the Senator from Massachusetts (Mr. BROOKE), the Senator from Idaho (Mr. CHURCH), the Senator from Kentucky (Mr. FORD), the Senator from Alaska (Mr. GRAVEL), the Senator from Maine (Mr. HATHAWAY), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from Maryland (Mr. MATHIAS), the Senator from Wisconsin (Mr. NELSON), and the Senator from Florida (Mr. STONE) were added as cosponsors of S. 2360, a bill to authorize an appropriation to reimburse certain expenditures for social services provided by the States prior to October 1, 1975, under titles I, IV, VI, X, XIV, and XVI of the Social Security Act.

S. 2395

At the request of Mr. THURMOND, the Senator from Arizona (Mr. DECONCINI), the Senator from Nebraska (Mr. ZORINSKY), the Senator from Michigan (Mr. RIEGLE), and the Senator from Pennsylvania (Mr. HEINZ) were added as cosponsors of S. 2395, a bill to place the foreign sovereign governments and the United States of America on the same level—a level of actual damages when either is injured in its business or property, and for other purposes.

S. 2420

At the request of Mrs. HUMPHREY, her name was added as a cosponsor of S. 2420, the International Development Cooperation Act of 1978.

S. 2452

At the request of Mr. ANDERSON, the Senator from South Dakota (Mr. MCGOVERN), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Maine (Mr. HATHAWAY), the Senator from Maryland (Mr. SARBANES), the Senator from New Jersey (Mr. CASE), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Oregon (Mr. PACKWOOD), the Senator from Iowa (Mr. CLARK), the Senator from New York (Mr. MOYNIHAN), the Senator from North Dakota (Mr. BURDICK), and the Senator from Ohio (Mr. METZENBAUM) were added as cosponsors of S. 2452, a bill to authorize funds for the Hubert H. Humphrey Institute of Public Affairs.

S. 2484

At the request of Mr. BELLMON, the Senator from Nebraska (Mr. ZORINSKY) was added as a cosponsor of S. 2484, a bill to impose quotas on the importation of beef, including processed beef and beef quantities in the form of live cattle, when the domestic market price of cattle is less than 110 percent of parity and to impose custom duties on such articles when the domestic market price of cattle is less than 80 percent of parity.

SENATE JOINT RESOLUTION 101

At the request of Mr. DOMENICI, the Senator from Montana (Mr. MELCHER), the Senator from New Hampshire (Mr. DURKIN), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Utah (Mr. GARN), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Kansas (Mr. DOLE), and the Senator from Kentucky (Mr. HUDDLESTON) were added as cosponsors of Senate Joint Resolution 101, to authorize the President to issue a proclamation designating a memorial Sunday for firefighters who have been disabled or killed in the line of duty during the preceding year.

SENATE RESOLUTION 356

At the request of Mr. WEICKER, the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of Senate Resolution 356, a resolution insisting that the Republic of Korea cooperate fully with the Select Committee on Ethics and declaring that a failure to cooperate will have a negative impact on relations between the United States and the Republic of Korea.

AMENDMENT NO. 1678

At the request of Mr. BAYH, the Senator from South Dakota (Mr. MCGOVERN) was added as a cosponsor of amendment No. 1678 intended to be proposed to S. 148, a bill to provide for the establishment of multipurpose service centers for displaced homemakers.

SENATE RESOLUTION 392—SUBMISSION OF A RESOLUTION AUTHORIZING ADDITIONAL EXPENDITURES

Mr. LONG, from the Committee on Finance, reported the following original resolution, which was referred to the Committee on Rules and Administration:

S. RES. 392

Resolved, That, in holding hearings, reporting such hearings, and making investigations as authorized by sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with its jurisdiction under rule XXV of the Standing Rules of the Senate, the Committee on Finance, is authorized from March 1, 1978, through February 28, 1979, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on

Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

SEC. 2. The expenses of the committee under this resolution shall not exceed $635,000, of which amount not to exceed $40,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1979.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

SENATE RESOLUTION 393—ORIGINAL RESOLUTION REPORTED PROPOSING EMERGENCY ACTION TO BOLSTER THE FARM ECONOMY

Mr. TALMADGE, from the Committee on Agriculture, Nutrition, and Forestry, reported the following original resolution, which was placed on the calendar:

S. RES. 393

Whereas a strong and vigorous agriculture is essential to the welfare of the Nation;

Whereas more than 218 million persons in this country and many millions more throughout the world depend upon American agriculture for food and fiber;

Whereas the Nation's agricultural economy is undergoing a crisis of major proportions—farmers are being crushed by overwhelming debt, the cost of producing food and fiber has outstripped the prices many farmers receive for their products, and farmers have been devastated by drought, floods, and other natural disasters; and

Whereas the Food and Agricultural Act of 1977 grants broad authority to the President and the Secretary of Agriculture to provide price and income protection for farmers and assure consumers of an abundance of food and fiber at reasonable prices: Now, therefore, be it

Resolved, That it is the sense of the Senate that the President and the Secretary of Agriculture should exercise the broad authority vested in them under the Food and Agriculture Act of 1977 and other statutes to increase farm income, including, but not limited to the following actions:

(1) the institution of voluntary land diversion programs for 1978 under which payments would be made to producers of wheat, feed grains, and upland cotton who divert cropland from production in order to bring supply into balance with need;

(2) th establishment of price support loan rates for the 1978 crops of wheat, feed grains, and soybeans at levels substantially above the rates in effect for the 1977 crops in order to provide greater price protection for farmers;

(3) the establishment of a price support loan rate for the 1978 crop of additional peanuts at a level not less than the minimum level required for quota peanuts; and

(4) the immediate formulation and implementation of a program for the expansion of export sales of American agricultural commodities, including increased sales under the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480).

SEC. 2. The adoption of this resolution is not intended in any way to affect the consideration by Congress of additional legislation that may be needed to assist farmers for the 1978 and subsequent crop years and alleviate the economic plight of the agricultural economy, including legislation involving new concepts and approaches.

SEC. 3. The Secretary of the Senate shall transmit copies of this resolution to the President and the Secretary of Agriculture.

SENATE CONCURRENT RESOLUTION 65—SUBMISSION OF A CONCURRENT RESOLUTION RELATING TO REVIEWS OF FEDERALLY OWNED ROADLESS AREAS

Mr. CHURCH (for himself, Mr. CRANSTON, Mr. MARK O. HATFIELD, Mr. PACKWOOD, Mr. MCCLURE, Mr. MCGOVERN, Mr. GRAVEL, Mr. WALLOP, Mr. SCHMITT, Mr. LAXALT, and Mr. HAYAKAWA) submitted the following concurrent resolution, which was referred to the Committee on Energy and Natural Resources:

S. CON. RES. 65

Whereas, Congress in 1964 established the National Wilderness Preservation System in order to secure for the American people an enduring resource of wilderness, consisting of certain federal lands preserved and protected in their natural condition;

Whereas, Congress has, on several occasions since the enactment of the Wilderness Act of 1964, moved to expand the National Wilderness Preservation System to meet growing public needs for wilderness;

Whereas, Congress enacted the Forest and Rangeland Renewable Resources Planning Act of 1974, the National Forest Management Act of 1976, and the Federal Land Policy and Management Act of 1976, in order to protect, develop, and enhance the productivity and other values of certain portions of the Nation's lands and resources;

Whereas, unanticipated court and administrative actions have confused the wilderness picture in recent years by greatly expanding the potential addition of national forest lands to the National Wilderness Preservation System;

Whereas, the Forest Service is presently conducting a review of the roadless areas of the national forests and national grasslands to identify those areas that are best suited for wilderness as well as those areas better suited for non-wilderness uses, such as one or more of the multiple uses of fish and wildlife habitat, timber, livestock grazing, mining, developed recreation, and soil, land, and water rehabilitation;

Whereas, the Federal Land Policy and Management Act of 1976 directs the Bureau of Land Management to initiate a similar wilderness review of the roadless lands under its jurisdiction;

Whereas, other public lands under the jurisdiction of the National Park Service, the Fish and Wildlife Service, and other agencies are also being examined to determine their suitability as wilderness;

Whereas, in reaching decisions on land allocation, it is desirable to both preserve a rich heritage of the American wilderness and to assure that other resource and recreation needs and uses of the land are provided for in a sound balance;

Whereas, at present, the future use of over 150 million acres of publicly-owned roadless lands, which may not only be suitable additions to the National Wilderness Preservation Systems, but may also be of value for timber production, minerals, or other multiple-use applications, is largely uncertain;

Whereas, this uncertainty obscures the outlines of the National Wilderness System which should ultimately be created, and can also threaten the economic livelihood of certain towns and communities that are dependent upon the resources of the public domain; Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring) that it is the sense of the Congress that the Secretary of Agriculture and the Secretary of Interior should coordinate, among their respective departments and with Congress, their efforts to develop the National Wilderness Preservation System.

Be it further resolved, that interested individuals and groups are urged to participate in the present roadless area reviews, and to base their participation on a careful review of the facts, with a view toward finding solutions that are well balanced and serve both the need for development and the need to preserve America's wilderness heritage.

And, be it further resolved, that the future use of the roadless lands now under study by the Forest Service in the Roadless Area Review and Evaluation (RARE II) process, and by the Bureau of Land Management in their roadless area review, be decided as rapidly as possible so as to assure that the resource needs of the Nation will be met, to protect the economic stability of communities which are dependent upon the resources of the public lands, and to further the purposes of the National Wilderness Preservation System.

RARE II RESOLUTION

Mr. CHURCH. Mr. President, I am today introducing, along with 10 cosponsors, a resolution relating to the present wilderness reviews of the roadless areas in the public domain.

Specifically, this resolution calls upon the Forest Service and the agencies of the Department of the Interior to complete their roadless area reviews as rapidly as possible. Expedition is needed to protect the communities which are dependent upon the resources of these lands.

The resolution also calls upon individuals and groups who are interested in the outcome of these studies to "participate in the present roadless area reviews, and to base their participation on a careful review of the facts, with a view toward finding solutions that are well balanced and serve both the need for development and the need to preserve America's wilderness heritage."

Finally, the resolution requests the Secretary of the Interior to coordinate both among their respective agencies and with Congress, their efforts to develop the National Wilderness Preservation System.

Mr. President, this resolution was prompted in large measure by the second review and evaluation of the roadless areas of the national forests and national grasslands that was begun by the Deprtment of Agriculture last year.

That study, known as RARE II, sought, first of all, to identify the remaining roadless tracts within the National Forest System. This inventory was completed last November, and a list of roadless areas—on a forest by forest basis—was published in the Federal Register. The next stage of RARE II, according

to the Forest Service plan, is to develop a set of recommendations as to which of these roadless areas should be included within the National Wilderness Preservation System, which should be set aside for further study, and which should be restored to multiple-use management.

If it is successful, RARE II could help to reduce much of the uncertainty which hangs like a thundercloud over forest-dependent communities in the West. Because these communities must depend upon a predictable supply of timber for their survival, they are concerned that prolonged studies will effectively deny them sustenance. They yearn for a timely completion of RARE II, so that they can plan with certainty for the future. I share their concerns and have been working closely with the Department of Agriculture in an effort to keep RARE II on schedule.

If it is a success, RARE II will result in some needed decisions and cut through the Gordian knot which threatens to tie up local forest-dependent communities for years to come.

The Department of Agriculture has recognized the need to finish RARE II as rapidly as possible. It has set a final deadline of January 1, 1979, for the transmission of its recommendations to Congress for our review and action. This resolution urges the Department to do everything possible to adhere to that timetable. If it does not, sawmills in Idaho and throughout the West will be forced to shut down.

Mr. President, I ask unanimous consent that an article from Western Wildlands on RARE II, authored by Assistant Secretary of Agriculture M. Rupert Cutler, which describes the outlines and goals of RARE II in some detail, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RARE II

(By M. Rupert Cutler)

Perhaps it's the nature of human beings that just when a major conflict seems to be settled, the really heated controversy breaks out and spreads to even more issues. This has certainly been the case with the roadless and undeveloped areas of the National Forest System. Although the roadless areas controversy has been viewed in the light of the wilderness issue, the controversy actually includes all possible uses of these lands—and therein lies the conflict.

Perhaps it's also the nature of human beings to continue to seek resolution of controversy—at least, it is my nature to do so. The Carter Administration is concerned that we identify opportunities to use public lands for their full array of values. Hoping to determine the best use of the National Forest System roadless areas, I initiated what has become known as RARE II—the new Roadless Area Review and Evaluation. Through RARE II, all interested groups and individuals are asked to help find satisfactory solutions to the roadless issues now facing the National Forest System—and the nation. Only then will we be able to devote our full attention to protecting and managing the National Forests and Grasslands, which, after all, belong to all of us.

In the last decade or so, the Forest Service has had to work under intense pressure in managing the National Forests for multiple use. The roadless areas have been a particularly touchy issue, because allocating them to some of the other uses might take away their wilderness potential. Thus, the roadless areas have in essence been in limbo until the wilderness controversy could be resolved.

In the late 1950s and early '60s, the great debate on wilderness legislation was waged. The Wilderness Act emerged in 1964, after 8 years of hard-fought politics and compromise. Many people thought the issue had been settled, except for the Congressional actions that would result from studies mandated by the Act. How wrong they were!

The 10-year study of specified areas was only partially completed when the Forest Service decided it ought to have a look at areas of National Forest land that could be managed for wilderness values, but which were not mandated for study. The 1972 Roadless Area Review and Evaluation—which we now refer to as RARE I—was a bold step forward in trying to insure that the roadless areas would be allocated to their best use without years of controversy and delay. RARE I was intended, once again, to "settle" the roadless area question. Time has shown, once again, that this was not to be.

RARE I identified 56 million acres of roadless area in 1973. The Forest Service then selected 274 roadless areas, containing 12.3 million acres, for further wilderness study. But there were never adequate funds to carefully study these areas, either by themselves or in the framework of the Resources Planning Act proposals. One inherent problem is that wilderness considerations have a national political nature, while land management planning is characterized by local public involvement and evaluation.

Areas in the eastern National Forests were not emphasized, because the roadless areas in those forests had generally been recovering from the effects of man's activities, and at that time Congress was not including such areas in the National Wilderness Preservation System.

In addition, administrative appeals and lawsuits delayed implementation of many of the land management decisions that involved other uses. Many of the areas are still awaiting decisions on their most beneficial use—and this is not a reasonable or realistic situation when demands on the National Forest System are so great.

Both advocates and opponents of wilderness voiced their dissatisfaction with this situation. The Congress, reflecting this dissatisfaction, hurried to act on wilderness designation. The result was "piecemeal" legislation that often overlapped or conflicted with decisions made during comprehensive land management planning. Nor did most legislation address the question of total national needs from the National Forest System, whether for wilderness or other uses of the roadless areas. It was this situation—and the controversy surrounding it—that faced the Carter Administration when it came into office last January.

President Carter expressed his commitment to promptly identify areas to be added to the Wilderness System. In his environmental message to Congress, the President said: "When the Congress passed the Wilderness Act in 1964, it established a landmark of American conservation policy. The National Wilderness Preservtaion System created by this Act must be expanded promptly, before the most deserving of federal lands are opened to other uses and lost to wilderness forever. . . ."

Although it's been 13 years since Congress passed the Wilderness Act, some of the most basic questions about wilderness still confront us:

How much wilderness do we need now and for future generations?

What should be the National Forest share of this total?

How should wilderness be distributed geographically?

What about eastern National Forests and National Grasslands—do they require special judgments and criteria different from those of other wilderness areas?

What criteria should be used for wilderness designations?

What are the trade-offs when we designate land as wilderness, and how should we deal with these tradeoffs??

How do we balance diverse, often diametrically opposed public views of wilderness, and perhaps even more importantly, how do we take into account the views of those who do not come forward to participate in the decision-making?

In its efforts to answer these questions, the Forest Service is guided by the following principles:

1. Maintain an enduring system of high-quality wilderness.

2. Perpetuate the wilderness resources.

3. Consistent with these first two principles, provide opportunities for public use, enjoyment, and understanding of wilderness and the unique experiences which depend upon a wilderness setting.

4. Maintain plants and animals indigenous to the area.

5. Accommodate and administer those "non-conforming, but accepted" uses provided for in the Act in a way that minimizes their impacts.

6. Maintain stable watersheds.

7. Address protection needs for endangered species and their habitats.

Thus, we have a viable wilderness policy, but we still have to round out the total wilderness system to which it will apply. In addressing this question, several things are apparent: First, there are gaps in the present Wilderness System that need to be filled. Second, candidates to fill the National Forest System's share of those gaps will come from the roadless and undeveloped areas, on which there is a great deal of competition from other potential uses. And, finally, decisions on allocating these roadless areas must include involvement of an informed public. It was for these reasons that RARE II was undertaken last summer.

The two primary aims of RARE II are to speed up decisions on: (1) which roadless and undeveloped areas are needed to help round out the National Forest portion of a quality National Wilderness Preservation System; and (2) which areas should receive no further wilderness consideration but be devoted to other uses. RARE II will be completed in late 1978. We realize that it is impossible during such a short time-frame to successfully place each and every roadless area into one or the other of these distinct categories. Some areas will have to be remanded to the more traditional planning and study processes. However, if we are successful, this third group of areas should be relatively small.

As expected, the plan has stirred the wilderness controversy to a new level of intensity. One newspaper reporter claimed that I am sitting on one of the hottest seats in Washington, and I don't think he was referring to last summer's forest fire situation! But, I believe that RARE II will work. It will require rational give-and-take on all sides. Of those concerned with the allocation of the National Forest System roadless areas, I ask a little of your time, a lot of your advice, and even more of your understanding.

RARE II has four main stages:

1. The first phase, just completed in November, was development of an inventory of roadless and undeveloped areas in the Na-

tional Forest System, and the criteria that should be used in determining whether areas should be recommended as wilderness or made available for other uses. This phase included a major public involvement effort.

2. The second phase, which is occurring now, is a review and evaluation of individual areas in the inventory, using the selected criteria.

3. The third phase will begin in the spring, when a nationwide programmatic draft environmental statement supported by state segments addressing each area will be issued during another major public involvement effort.

4. The fourth place of RARE II will be a final environmental statement issued in late 1978, which will recommend to Congress the areas that should be designated as wilderness and those that should be devoted to other uses. Congress is the only body that can designate wilderness, but the Secretary of Agriculture may designate areas for other uses.

During the first phase of RARE II, the public was asked to comment on two principal matters:

1. Inventories of roadless and undeveloped areas in the National Forest System.

2. The criteria to use in determining whether areas should be recommended for wilderness designation, or made available for other uses.

Over 50,000 people offered comments and suggestions. Over 17,000 of them attended 227 workshops across the country, and the others mailed their comments to the Forest Service.

To give the public a basis from which to comment, the Forest Service developed a basic list of known roadless and undeveloped areas in each National Forest and Grassland. The criteria for this initial list were derived from assessing Congressional actions over the past few years. At first glance, it would seem that the criteria for such an inventory would have already been set—in the Wilderness Act of 1964. However, we must remember that the real measure of any legislation lies in its interpretation and implementation, both of which undergo evolution over the years. Since 1964, the makeup of Congress has changed, our resource needs have changed, and the attitudes of the American people have changed. Congress now apparently views the Wilderness Act very differently than it did in 1964.

If one studies wilderness proposals and wilderness designations over the past 13 years, a definite trend can be discerned. Congress now seems willing to designate as wilderness areas that are less "pure," in terms of the marks of man's presence, than the earlier wilderness areas. This is particularly true for the eastern National Forests, which have felt the greatest impact of man's settlement and westward expansion. In addition, Congress, in the Wilderness Act, set criteria for individual areas of wilderness, but not for the National Wilderness Preservation System as a total system to meet America's present and future needs for wilderness.

In fact, I ask the Forest Service to "hang loose" on the initial inventory and to consider every area for which there was public support. The initial inventory from which the public worked was intended to include all possibe areas, with the full knowledge that some areas would not best serve as wilderness. In fact, in some cases, as much as 30 to 40 percent of a forest was included as roadless and undeveloped. Some people expressed concern that all the areas might be immediately designated as wilderness. This was not the intent; this will not happen.

The results of this first round of public comment were published in November. The response served two purposes. First, it helped to identify all roadless and undeveloped areas in the 187-million-acre National Forest System—a total of 1,920 areas encompassing 65.7 million acres. Unlike the previous roadless area inventory, this one included 305 areas with 2.3 million acres in the eastern National Forests, and 19 areas in the National Grasslands.

The only roadless and undeveloped areas not included are:

Those that would violate contractual agreements or legal rights.

Those that had already been allocated to nonwilderness uses by completed land management plans on which final environmental statements had been filed.

Those in which action plans were scheduled to be implemented by October 22, 1978.

Those that would be impractical to manage in their natural condition.

In addition, development will be deferred on 34 other areas for which land management plans have already been completed so that their wilderness potential can be re-evaluated. The re-evaluation of these 700,000 acres will occur at the same time the inventoried areas are evaluated.

The second purpose of the public comment was to help the agency establish criteria to use in preparing alternatives for further public review. Those alternatives will be designed to help determine which areas should be recommended as wilderness and which should be managed for other uses.

The criteria will be applied in two steps. The first will involve four criteria used to identify gaps in the existing wilderness system and describe the "ideal" system. These criteria are:

1. Representations of the nation's major ecosystems.

2. The presence of certain wildlife species, such as the fisher and the loon, which people associate with wilderness.

3. Availability and distribution of areas according to the nation's population.

4. Representation of major U.S. landforms, such as the Appalachian plateau, the Northern Rockies, and so on.

The second step will bring another set of criteria into play. These criteria, also addressed by the public in last summer's workshops, will focus on the social and economic costs of designating areas which successfully passed the first step for wilderness need under the RARE II evaluation. These criteria will include the present or potential impacts on timber, minerals and energy production, recreation use and development, wildlife habitat manipulation, and a number of other uses not generally in harmony with wilderness designation.

This, then, sets the stage for the second phase of RARE II—the review and evaluation of the individual areas in the inventory, using the selected criteria. The review and evaluation by the agency will be carried out within the constraints of the Resources Planning Act Program goals sent to Congress in 1976. That program, now being updated for 1980, established ranges of goals for all Forest Service resource systems, including wilderness.

The third stage of RARE II then, will begin next spring, when a nationwide programmatic draft environmental statement will be issued. The statement will be supported by geographic segments addressing specific areas, probably by states. Groups, government agencies, and individuals can then comment on whether specific areas should be recommended for wilderness designation or allocated for other uses. Releasing the document in the spring will allow an entire field season for people to view and study areas on which they wish to comment.

The fourth phase of RARE II will be the release of a final environental statement in late 1978 and subsequent decisions. This document will set forth an alternative for legislative proposals and planning directions that recommends certain roadless and undeveloped areas for wilderness units and other for nonwilderness uses.

The success of RARE II will depend on the Administration, Congress, and the American people. And, even with maximum success, RARE II cannot solve all aspects of the roadless area controversy. But, it will solve one of the first issues we must face before we can truly address the others—the prompt classification of areas into a comprehensive, high-quality National Wilderness Preservation System, and the winnowing out of those areas which can unquestionably be devoted to other uses.

This is what we are all seeking. Together, we can make it a reality. It was in this spirit that conservation movement was born, and wilderness pioneers initiated the concept of preserving some lands in their natural state. It is this spirit that will allow us to expand opportunities for future generations to enjoy an enduring National Wilderness Preservation System, and the other products and services that the National Forests provide. In this way, these lands, owned by the American people, will continue to help meet a multitude of the needs of our nation—now and in the future.

AMENDMENTS SUBMITTED FOR PRINTING

NAVIGATION DEVELOPMENT ACT—H.R. 8309

AMENDMENT NO. 1693

(Ordered to be printed and to lie on the table.)

Mr. HEINZ submitted an amendment intended to be proposed by him to the bill (H.R. 8309) authorizing certain public works on rivers for navigation, and for other purposes.

Mr. HEINZ. Mr. President, I submit an amendment which I intend to offer to H.R. 8309, the Navigation Development Act. I ask unanimous consent that the amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 1693

At the proper place in the bill insert a new section as follows:

SECTION —. The Project for Dashields Lock and Dam on the Ohio River in Allegheny County, Pennsylvania, as authorized by the River and Harbor Act of March 3, 1909 (35 Stat. 815), is hereby modified to authorize the Secretary of the Army, acting through the Chief of Engineers, and in cooperation with Allegheny County, Pennsylvania, to construct public park and recreational facilities with improved access thereto in accordance with the requirements of section 4 of the Flood Control Act of 1944, as amended (16 U.S.C. 460d), on lands adjacent to the project that are acquired and held by Allegheny County for recreational use by the general public, and to permit Allegheny County to include the value of such lands as part of its contribution toward the development of such facilities.

PANAMA CANAL TREATIES—EX. N, 95–1

AMENDMENTS NOS. 20 AND 21

(Ordered to be printed and to lie on the table.)

Mr. ROBERT C. BYRD (for himself, Mr. ALLEN, Mr. ANDERSON, Mr. BAKER, Mr. BARTLETT, Mr. BAYH, Mr. BENTSEN, Mr. BIDEN, Mr. BROOKE, Mr. BUMPERS, Mr. BURDICK, Mr. CASE, Mr. CHAFEE, Mr.

CHILES, Mr. CHURCH, Mr. CLARK, Mr. CRANSTON, Mr. DANFORTH, Mr. DECONCINI, Mr. DOMENICI, Mr. DURKIN, Mr. EAGLETON, Mr. FORD, Mr. GARN, Mr. GLENN, Mr. GOLDWATER, Mr. GRAVEL, Mr. HANSEN, Mr. HART, Mr. HASKELL, Mr. HATCH, Mr. PAUL G. HATFIELD, Mr. HATHAWAY, Mr. HEINZ, Mr. HOLLINGS, Mr. HUDDLESTON, Mrs. HUMPHREY, Mr. INOUYE, Mr. JACKSON, Mr. JAVITS, Mr. KENNEDY, Mr. LAXALT, Mr. LEAHY, Mr. LUGAR, Mr. MATHIAS, Mr. MATSUNAGA, Mr. MCCLURE, Mr. MCGOVERN, Mr. METZENBAUM, Mr. MORGAN, Mr. MOYNIHAN, Mr. MUSKIE, Mr. NELSON, Mr. NUNN, Mr. PACKWOOD, Mr. PEARSON, Mr. PELL, Mr. PERCY, Mr. RANDOLPH, Mr. RIBICOFF, Mr. RIEGLE, Mr. ROTH, Mr. SARBANES, Mr. SASSER, Mr. SCHMITT, Mr. SCHWEIKER, Mr. SPARKMAN, Mr. STAFFORD, Mr. STEVENS, Mr. STEVENSON, Mr. STONE, Mr. TALMADGE, Mr. THURMOND, Mr. TOWER, Mr. WALLOP, Mr. WEICKER, Mr. WILLIAMS, and Mr. YOUNG) submitted two amendments intended to be proposed by them, jointly, to Executive N, 95–1, the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal.

(The remarks of Mr. ROBERT C. BYRD when he submitted the amendments appear later in today's proceedings.)

NOTICES OF HEARINGS

COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I wish to give notice that a public hearing has been scheduled for Tuesday, February 21, 1978, at 10:30 a.m., in room 2228, Dirksen Senate Office Building, on the following nomination:

Benjamin R. Civiletti, of Maryland, to be Deputy Attorney General, vice Peter F. Flaherty, resigned.

Any person desiring to offer testimony in regard to this nomination, shall not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full Judiciary Committee.

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. HASKELL. Mr. President, I wish to announce for the information of the Senate and the public, the scheduling of a public hearing before the Subcommittee on Energy Production and Supply of the Senate Energy and Natural Resources Committee.

The hearing is scheduled for February 16, 1978 at 10 a.m. in Metals Hall at the Colorado School of Mines in Golden, Colo. This will be a hearing on the status of efforts to test the commercial possibilities of oil shale and certain suggestions for modification of S. 419, the Federal Oil Shale Commercialization Test Act.

For further information regarding the hearings you may wish to contact Thomas L. Laughlin of the subcommittee staff on extension 4–2564.

COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS

Mr. PROXMIRE. Mr. President, I should like to announce that the Committee on Banking, Housing, and Urban Affairs will hold an oversight hearing on Wednesday, February 22, 1978, on the crime and riot reinsurance programs under the administrative jurisdiction of the Department of Housing and Urban Development.

The hearing will begin at 10 a.m. and will be held in room 5302, Dirksen Senate Office Building.

The committee would welcome statements for inclusion in the hearing record.

COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS

Mr. PROXMIRE. Mr. President, the Committee on Banking, Housing, and Urban Affairs will hold an oversight hearing, on Monday, February 27, 1978, on the impact of building codes on housing rehabilitation.

The hearing will begin at 10 a.m. and will be held in room 5302, Dirksen Senate Office Building.

The committee welcomes statements for inclusion in the record of hearings.

COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS

Mr. WILLIAMS. Mr. President, I wish to announce that the Committee on Banking, Housing and Urban Affairs has scheduled hearings on S. 2441, the Federal Public Transportation Act of 1978.

The hearings will be held on March 1, 2, and 3 at 10 a.m. each day in the committee's hearing room, room 5300 Dirksen Senate Office Building.

CONGRESSIONAL TENURE

Mr. BAYH. Mr. President, the Subcommittee on the Constitution of the Committee on the Judiciary will hold 2 days of hearings, March 14 and 16, 1978, on proposed constitutional amendments to limit the number of terms of service for Members of Congress (S.J. Res. 27 and S.J. Res. 28). The hearings will commence at 9:30 a.m. on both days, March 14, 1978, in room 5110 Dirksen Senate Office Building, March 16, 1978 in room 6226 Dirksen Senate Office Building.

Anyone wishing to submit testimony for the hearing record should send his or her statement to or contact Mary K. Jolly, Subcommittee on the Constitution, 102B Russell Senate Office Building, Washington, D.C. 20510.

CANCELLATION OF HEARING ON SENATE RESOLUTION 49

Mr. PELL. Mr. President, the Subcommittee on Arms Control, Oceans and International Environment of the Committee on Foreign Relations had previously scheduled a hearing on the topic of Senate Resolution 49 (as revised) to be held in room 4221 of the Dirksen Senate Office Building at 11 a.m. on Thursday, February 9. This hearing has now been canceled and will be rescheduled at a later date.

ADDITIONAL STATEMENTS

COMMUNISM IN WESTERN EUROPE

Mr. BROOKE. Mr. President, in recent weeks a growing number of observers have cautioned against "optimistic assumptions" regarding the "conversion to democracy" professed by various Communist Parties in Western Europe. An increased awareness exists of the danger Communist Parties in France, Italy, and Portugal pose to the fabric of democracy in Western Europe and the stability of the NATO alliance, the cornerstone of American foreign policy for over 30 years.

Two recent articles, one by Claire Sterling in the Washington Post, the other by Edwin Yoder writing in the Star, offered perceptive analyses of the complexities besetting those of our allies who are challenged by assertive Communist Parties. The Sterling article points out that the decision by the Communist Party of Italy (PCI) to precipitate the crisis that led to the fall of the Andreotti government was not primarily motivated by a concern for the Italian people, but rather resulted from a PCI fear of loss of influence. The Andreotti government had made some progress in addressing the economic and social ills of the country and could, possibly, have been setting the stage for an erosion of Communist power. Moreover, the PCI was motivated, apparently, by the need to prove its bona fides to the radicals on the left who were charging that the PCI had become nothing more than Social Democrats. The PCI, in effect, was being charged as selling out to the Christian Democrats.

Related to the above was the PCI reaction to the growing realization in Italy that it could not deliver the working class in the effort to bring stability to the Italian labor scene. To the extent the so-called progressive elements in the PCI leadership had sought to act responsibly in giving de facto support to the Andreotti government's efforts to decrease the instability of the Italian economy and social environment, they had been attacked by radical labor elements, alienated left-wing students and the hard-line Stalinist elements in the PCI who continue to have major and, likely, controlling influence over the PCI. Confronted by such pressure the leadership front of the PCI buckled and demanded full membership in the Italian Cabinet as a price for any help in meeting the multiple crises of Italy. In doing so, they were fully aware that they might precipitate the disintegration of Italian society and a possible civil conflict. It does not take much imagination to surmise that many elements in the PCI would find such a development acceptable.

The Yoder articles also addresses itself to the democratic conversion claim. The author offers a persuasive refutation to that claim accepted far too readily by many in this country and elsewhere. He points out that the Communist parties in Western Europe certainly do not exhibit the least degree of democracy within their party structures and that it takes a blind leap of faith to assume that they are, nevertheless, irrevocably committed to democratic procedures. As he states:

If the "Eurocommunists" are not themselves internally democratic. why expect

them to observe parliamentary niceties when they are no longer expedient?

Why, indeed.

The author also points out that on matters of substance, there is no evidence to justify the view that the Communists of Western Europe diverge in any significant degree from espousal of Soviet foreign policy undertakings. He quotes Jean-Francois Revel to the effect that—

. . . Not once since 1975 has a Western communist party adopted . . . a reserved or critical attitude towards any Russian foreign policy.

I personally find the arguments put forward by these two authors to be in conformity with a realistic appraisal of the dangers inherent in the growth of influence of the Communist parties in Western Europe. I believe their articles merit careful consideration and, therefore, ask unanimous consent that the Yoder and Sterling articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Star]

A PRIMER ON THE CLAIMS OF "EUROCOMMUNISM"

(By Edwin M. Yoder, Jr.)

I am easily bored, I admit, by the theoretical humbug of Marxism, so that it was only recently, when the imminent collapse of Italy's wobbly government inspired the Carter administration's January 12 statement against so-called "Eurocommunism," that I undertook a crash course in the subject.

I start with the bias that all communist parties, Euro and otherwise, are implacably hostile to Western political values and that no good can come of temporizing with them. When I put that view to certain friends then grinding their teeth over U..S "meddling" in Italian affairs (not that they mind our meddling in Brazil, Rhodesia or South Africa) I was assured that my worries are exaggerated.

Please understand: None of my friends who deplore the gall and *gaucherie* (as they see it) of the January 12 statement *like* communism. Their approach is pragmatic. They take the elaborate, and I fear rather academic view that Eurocommunism—especially in Italy—is a greater headache for the Russians than for the Western alliance. They are contemptuous of the ineffectiveness and corruption of the Italian Christian Democrats, and seem to argue that the communists could at least deliver the mail on time. As evidence of enlightenment, they cite the Eurocommunists' harsh criticism of Soviet intervention in Czechoslovakia. But they do not account for the inconsistency of Sr. Lombardo Radice, an ideologue often portrayed as one of the more "liberal" Italian communists. Sr. Radice has excused Khrushchev's tanks in Budapest in 1956, on the grounds that "socialism in Hungary was a weak plant, only some seven years old, and there was danger of regression to capitalism."

Finally, my friends believe that nothing intrinsic to an authoritarian party prevents its "evolution" toward democratic norms.

All these views seem to me historically debatable, to say the least.

"Eurocommunism," one gathers, does pain the Russians, probably for tactical reasons. Moscow is troubled that Western communist parties—of necessity, given their ambitions—promise to play parliamentary cricket. This "bourgeois" doctrine, cynical or sincere, by implication condemns six decades of absolute party rule in the Soviet Union; and it exposes unwilling Soviet vassals in Eastern Europe to a suggestive heresy.

The Russians are also troubled by Chilean precedent. In their view, Salvador Allende gained power at the ballot box but lacked the ruthlessness to consolidate it. They fear that premature political ambitions in Western Europe could bring on a similar debacle, in Italy or elsewhere. That is one reason why Sr. Berlinguer's party has not been pushy for ministerial portfolios in Rome.

It can't be said too often that no committed communists, anywhere, believe that governments derive legitimacy from consent. Elections are sometimes expedient, and always get lip service. But in the Leninist view, elections do not confer legitimacy. That belongs only to the proletarian "vanguard"—those who know and do the will of the working masses—the party and its bosses.

In Latin Europe today there are, to be sure, communist parties claiming to favor most of the things we favor, from the Common Market to free elections—even NATO, with reservations. (One Italian communist boss has conceded that American bases should remain in Italy as long as the Russians stay in Czechoslovakia, slyly equating an alliance with an occupation.)

But a telling mark of authoritarian orthodoxy lingers. No European communist party, so far, has abandoned the tell-tale Leninist doctrine of "democratic centralism." In plain English, that means rigid control of the party from the top, with no nonsense about internal democracy. Oh, there may be discussion, even "dissent," since for one thing the Eurocommunists are yet in control and cannot imprison obstreperous party critics, or find them to be suffering from political schizophrenia. But when the bosses speak and the line hardens, there is one orthodoxy. That accounts, incidentally, for the paradox that the current "democratic" professions of Eurocommunists are by and large the products of thoroughly authoritarian proceedings.

Ask yourself this critical question, then: If the "Eurocommunists" are not themselves internally democratic, why expect them to observe parliamentary niceties when they are no longer expedient? History's answer, at least, is that they won't—or never have.

It is suggested that these fusty worries are irrelevant to Italy. The Christian Democrats, you see, are only slightly more powerful than the communists and govern on their sufferance. Admitted to the government, the communists would only visibly gain the influence they already dispose behind the scenes.

Perhaps; perhaps, too, the Italians are of a mind to gamble, in their current weariness, on the possible redemption of their domestic communists from Leninist procedures. If they do, we probably won't send the Marines.

What we can do—now—is stop equivocating about the dangers. An Italy substantially influenced by communist ministers could become an ally at cross-purposes. As Jean-Francois Revel has recently observed, not once since 1975 has a Western communist party adopted "a reserved or critical attitude" towards any Russian foreign policy. "Whether it be Angola, Mozambique, the Polisario liberation front, the conflict between Ethiopia and Somalia, the Helsinki agreements, Israel, the civil war in Lebanon, communist newspapers and communist leaders in the West have approved wholly and unconditionally Soviet theories and behavior."

Claire Sterling reported from Rome the other day that the Italian communists have been living on American equivocations ever since Henry Kissinger left the State Department. I, for one, am delighted that the U.S. has at last made it clear that Eurocommunist purposes are not ours, and cannot be ours. If the Italians want to play with fire, we probably can't stop them. We can shut the match box.

[From the Washington Post]

WHY THE COMMUNISTS JUNKED THE ITALIAN GOVERNMENT

(By Claire Sterling)

ROME.—The Italian Communists contend, and many other people agree, that only they can save the country now. But how would they go about it, exactly?

The case of the late Andreotti government doesn't augur well. Though born of necessity, that is not what it died of. It was killed off deliberately when Communist leaders realized that even so modest a venture in collusion with the establishment was playing havoc with their party.

The Andreotti experiment lasted 17 months. A minority Christian Democratic Cabinet, in a Parliament with no workable majority, it came into being when the Communists agreed not to vote against it and passed away when they decided not to go on not voting against it. (The smaller Liberal, Republican, Social Democratic and Socialist parties did the same, but counted incomparably less.)

What made the Communists suddenly junk a government getting more done than most, whose elaborate six-party program they had helped to draft and warmly endorsed barely five months before, became disturbingly clear only after the event. What they *said* made them do it was a national emergency so bad that Italy could no longer be governed without them. As a consequence, Italy is no longer being governed at all. In a deadlock that could last for months, several urgent reforms have been frozen midway through their parliamentary passage: a comprehensive medical-care and health law, which Italians have dreamed of for years; a fair rent law they've been dreaming of since the war; and a bill giving the police special powers to cope with terrorist violence—which the Communists had approved in the six-party program and have kept bottled up in parliamentary committee ever since. Predictably, meanwhile, the emergency goes on getting worse.

Though Italy is not quite so desperately close to a crackup as some interested parties make out, it is certainly in a lot of trouble. It has the highest incidence of political terrorism in the world, the highest inflation in Europe (though reduced by a quarter last year) and the highest number of unemployed in Europe (1.6 million, three-quarters of them under 30). It owes $20 billion abroad, while its budget deficit has doubled in a year to over $30 billion. Its productivity is half, and labor costs per unit double, the Common Market average. It is nevertheless the only industrial nation where real wages went up 7 percent last year, on top of a 25 percent automatic, indexed increase to keep up with living costs. The majority of its larger factories are operating at half capacity, while forbidden by law and the unions to lay off workers with nothing to do. And many or most state-controlled industries would go under tomorrow if not for prodigal state handouts.

These are terrible problems, but they certainly can't all be blamed on Andreotti's government. Political terrorism, from the extreme left especially, is if anything directed more virulently against the Communists themselves than the ruling Christian Democrats. Nine-tenths of the yawning state deficit is caused by inflated state

payrolls and pensions, constantly swelling on the insistence of heavily Communist-influenced trade unions. Grotesque distortions in the economy are only partly the result of 30 years under Christian Democratic misrule; the other part is the fault of a rigidly protectionist unionized workers' caste, taking care of its own at the expense of the taxpayers, the backward south and the unemployed.

Yet throughout these 17 months, the Communists (and Socialists, to be fair) have demonstrably dragged their feet on effective antiterrorist measures. Communist leaders have promised a medium-term blueprint to restructure the economy, only to come up with a 120-page instant-happiness brochure that deserved no attention and got none. The six-party program, in which they had a very large voice, indeed promised terrific reforms of practically everything in the distant future, but thoughtfully avoided mentioning a single neuralgic issue affecting organized labor. The Communists' most spectacular success, in those programmatic negotiations, was in talking the Christian Democrats into divvying up on power posts and patronage: in the state radio-television network, in large and strategic banks, in control over welfare and credit institutions transferred from Rome to local and regional governments. The Communists' most spectacular failure, on the other hand, was in the area where they could supposedly do the most good.

Communist leaders here obviously recognize the need for something resembling Great Britain's social contract: wage restraints, mass layoffs where necessary, more work and less absenteeism in exchange for less inflation, more jobs and more social equity all around. Party labor leaders like Luciano Lama have undeniably tried hard to head Italian workers in that direction.

But the fact remains that wages went up 32 percent overall last year. Implacable worker resistance keeps blocking redundancy layoffs. Bankrupt state industries keep getting bailed out at colossal cost, on the insistence of riotous workers. The state-owned Alfasud car factory, symbol of so many deluded hopes for the disinherited south, is still losing $100 million a year, while union leaders were helpless to prevent 713 wildcat ministrikes there in 1974.

Lama himself could not persuade the workers of Fiat, Italy's biggest private industry and foreign currency earner, to put in six Saturdays of overtime to fill a huge export order this winter. Nor could he dissuade 200,000 metalworkers from marching on Rome last November with demands that no Italian government could meet in times like these. It was when Lama also failed to prevent a call for a nationwide general strike, issued by the whole confederation of Catholic, Social Democratic, Republican, Socialist and Communist unions, that the Communist Party changed overnight from the Andreotti government's friend and ally to its executioner.

The blunt truth is that, in this first experimental stage on the way to full Catholic-Communist collaboration—Enrico Berlinguer's historic compromise—the Communists could not do what they claim they alone can do: deliver the working class. Their efforts so far have met with sullen or openly outraged resistance on the shop floor, alienated left-wing students and run into such hard-eyed criticism from Stalinist old-timers (and not such old-timers) inside the party that Berlinguer, its general secretary, was forced into sensational retreat.

To allay bitter suspicion of a sellout in these quarters, Berlinguer is insisting preemptorily now on a jump from the very first to the very last stage of his proposed historic compromise: direct Communist participation in the government. Acceptance so soon of an ultimatum so imperious, from a party whose shady past is still a vivid memory and whose recent performance has been less than convincing, by a traditionally ruling Christian Democratic Party with an explicit electoral mandate to the contrary, might well tear that ruling party to pieces. Maybe that would save Berlinguer, but would it save the country?

FOREIGN-FLAG VESSELS; HIGH SEAS FISH CATCHES

Mr. INOUYE. Mr. President, on September 29, I introduced S. 2158, a bill to amend 46 U.S.C. 251 so that foreign-flag vessels would be permitted to land a particular category of their high seas fish catches in our foreign trade zones for a very limited purpose.

I wish to emphasize that this legislation does not permit the sale of these commodities in the United States.

It is intended to permit the storing of foreign caught shark fins at our foreign trade zones for eventual exportation to Hong Kong or other foreign countries.

Present law which prohibits foreign-flag vessels landing their high seas fish catches in ports of the United States (46 U.S.C. 251(a)), has the effect of forbidding such landing within our foreign trade zones by 19 U.S.C. 81(a–u). And the Customs Service has ruled that shark fins are identical in commodity classification to foreign caught fish.

I ask unanimous consent that a legal memorandum from the National Oceanic and Atmospheric Administration on this matter be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. INOUYE. Mr. President, if the limited purposes of this bill is achieved there will be a valuable new export for Hawaii. And, as I shall explain, it will not undermine our protection given the U.S. fishing industry against foreign competition.

The situation which would enable Hawaii to have a valuable new item for export comes about as follows:

Foreign-flag fishing vessels call into Honolulu for supplies, and so forth on board in many cases, and completely incidental and apart from their catch, are shark fins from sharks which the seamen have caught on their own time while at sea.

While it would be highly uneconomical to fish for shark fins commercially in this way, it becomes economically feasible when the shark fins are a byproduct as it were of the fishing expedition.

Hawaiian businessmen are willing to buy these shark fins, place them in a bonded warehouse, and sell them to markets in the Far East such as Hong Kong.

These shark fins will neither be sold on the U.S. market, nor does the catch pose a threat to the American fishing industry.

What S. 2158, would do, however, is add a new valuable export for Hawaii and, therefore, be an additional source of revenue.

Mr. President, I wish to emphasize this is the sole purpose of S. 2158, and if its scope goes beyond that, it is unintentional, and I would willingly accept whatever amendments are necessary.

EXHIBIT 1

LEGAL MEMORANDUM

The question has arisen whether the prohibition against foreign flag vessels landing their high seas fish catches in ports of the United States, 46 USC § 251(a), has the effect of forbidding such landing within the foreign trade zones authorized by 19 USC §§ 81a–u. I have concluded that it does have this effect, and that foreign flag vessels may not land their catches in foreign trade zones of the United States, except as otherwise provided by treaty or convention. 464 USC § 251(a) provides in relevant part as follows:

". . . Except as otherwise provided by treaty or convention to which the United States is a party, no foreign-flag vessel shall, whether documented as a cargo vessel or otherwise, land in a port of the United States its catch of fish taken on board such vessels on the high seas or fish products processed therefrom, or any fish or fish products taken on board such vessel on the high seas from a vessel engaged in fishing operations or in the processing of fish or fish products."

19 U.S.C. § 81c provides in part:

"Foreign and domestic merchandise of every description, except such as is prohibited by law, may, without being subject to the customs laws of the United States, except as otherwise provided in this chapter, be brought into a zone and may be stored, sold, exhibited, broken up, repacked, assembled, distributed, sorted, graded, cleaned, mixed with foreign or domestic merchandise, or otherwise manipulated, or be manufactured except as otherwise provided in this chapter, and be exported, destroyed, or sent into customs territory of the United States therefrom, in the original package or otherwise; but when foreign merchandise is so sent from a zone into customs territory of the United States it shall be subject to the laws and regulations of the United States affecting imported merchandise. . . ."

The question whether the fish and fish products described in 46 U.S.C. § 251(a) are "merchandise . . . such as is prohibited by law" within the meaning of 19 U.S.C. § 81c is one on which the legislative history of the latter statute is unenlightening, and which has not been addressed by the Foreign Trade Zones Board. These fish and fish products may freely enter the United States once they have been landed, even for a very short interval, in a foreign port. It appears, in fact, that the practice has arisen of taking such fish for a short time immediately after catch to nearby Canadian ports, and then shipping them in short order to the United States. It can thus be argued that 46 U.S.C. § 251(a) determines when certain fish and fish products may enter the United States, rather than whether they may do so; and that those fish and fish products should therefore not be considered "prohibited by law" for purposes of 19 U.S.C. § 81c.

The regulations of the Foreign Trade Zones Board, 15 CFR § 400.801, and U.S. Customs Service, 19 CFR § 146.11, describing the merchandise permitted in a Zone, do not shed any light on the merits of this argument. They attempt to distinguish "merchandise which is prohibited by law on the grounds of policy or morals" ("prohibited" merchandise), which may not be brought into a zone, from "merchandise which may be imported under certain conditions" either by permit or license, or after being brought into compliance with law ("conditionally admissible"

merchandise), which may be brought into a zone. Depending on whether one wishes to emphasize the policies underlying the prohibition of 46 U.S.C. § 251(a), or the fact that this prohibition will evaporate as soon as the foreign-caught fish are brought into another country, an argument can be made for classifying them in either of the categories provided for in the regulations.

Despite the plausible arguments that can be made to the contrary, I have concluded that the fish and fish products described in 46 U.S.C. § 251(a) are the "merchandise . . . such as is prohibited by law" within the meaning of 19 U.S.C. § 81c; and that they therefore may not be brought into a foreign trade zone in the absence of treaties or international conventions to the contrary. This conclusion is based on the policy of the 1950 amendment of 46 U.S.C. § 251(a) excluding these fish and fish products. This policy was to protect the United States fishing industry from foreign competition, 1950 U.S. Code Cong. Service 3539–40 (81st Cong. 2d Sess.), apparently by increasing the expense and inconvenience of foreign fishing off United States shores, and adversely affecting the competitive position of foreign-caught fish in the United States market. This policy would be appreciably undermined by not considering foreign fish catches to be "prohibited by law" for purposes of the Foreign Trade Zones Act. These fish would be brought into foreign trade zones only when it would be to the economic advantage of foreign fishing interests for this to be done. It was the very purpose of the 1950 amendment to disadvantage these interests, and it was passed under circumstances indicating the clear intent to override in this area liberal trade policies like those underlying the Foreign Trade Zones Act. Foreign fish catches should therefore be considered to be "prohibited by law" for purposes of 19 U.S.C. § 81c until the owners have gone to the expense and inconvenience, however nominal, of landing them in a foreign port.

This conclusion is consistent with the position taken by this Office in January 1976 on the shipment of South African sealskins into foreign trade zones. In a letter of January 22, 1976, to counsel for the Fouke Company, it was stated that the MMPA moratorium on importation of marine mammal products forbade shipment of the skins into a foreign trade zone until a waiver covering those skins had been obtained. After granting of the waiver, the skins became "conditionally admissible" merchandise for purposes of the regulations, and could be brought into the zone pending the grant of an import license. The landing prohibition of 46 U.S.C. § 251(a) is not subject to waiver or other relaxation like the MMPA moratorium. The fish and fish products described in that provision should therefore, if this Office is to maintain a consistent position, be treated for purposes of the Foreign Trade Zones Act like marine mammal products for which a waiver has not been granted, and forbidden entry into a zone except as otherwise provided by international agreement.

BOSQUE DEL APACHE NATIONAL WILDLIFE REFUGE

Mr. DOMENICI. Mr. President, I know that it is not often that we in this body can see the physical results of our work. Often it seems that we must operate in a vacuum.

However, in my home State of New Mexico, the actions of this body have taken concrete form in the Bosque del Apache National Wildlife Refuge. Part of that refuge is now wilderness, under a bill I authored and which was signed into law last Congress.

To show that America can have a refuge, a wilderness area, protected species, and use by sightseers and hunters, I bring to my colleagues' attention a recent article in the Wall Street Journal, "Goose Hunters Take Great Pains To Avoid Taking a Shot at Ida."

This excellently written story, by John Huey, who shows an unorthodox, but commonsense approach, has brought a real truce between conservationists and waterfowl hunters.

No one can imagine without actually going to the refuge the beauty of the Bosque del Apache. That both ornithologists and hunters enjoy it is testimony to what good will can accomplish. I send my congratulations to all those who work on the refuge and to those who enjoy it, abiding by the necessary rules.

I also congratulate the farsightedness of my colleagues who first instituted the refuge and wilderness systems. We in New Mexico have shown that these systems work for all.

Mr. President, I ask unanimous consent that the Wall Street Journal article, "Goose Hunters Take Great Pains To Avoid Taking a Shot at Ida" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOOSE HUNTERS TAKE GREAT PAINS TO AVOID TAKING A SHOT AT IDA

(By John Huey)

BOSQUE DEL APACHE, N. MEX.—It's 5 a.m. in this dark, icy bog somewhere in the Rio Grande Valley near the foot of the Magdalena Mountains. Forty eager goose hunters are seated on bales of hay in an army tent, shivering and staring at some stuffed birds.

The hunters have gone to almost as much trouble to get here as the geese, who flew 3,000 miles from the Arctic. They have bought special permits, taken bird-identification tests, and drawn lots for admission to the hunt. Now a stern voice from a tape recorder is reading them their rights.

If they shoot the wrong bird, the voice reminds them, they face a felony conviction punishable by two years in jail and a $20,000 fine. The stuffed birds help the hunters tell the difference between the right birds and the wrong ones.

Meanwhile, the prime wrong birds, Homer and Ida—two young whooping cranes, or whoopers as they are called here—are just beginning to stir down in the swamp. A wildlife biologist is nearby, watching them through binoculars, ready to report any flight to command headquarters on his walkie-talkie.

A PECULIAR EVENT

This is no ordinary goose hunt. What is happening here at the Bosque Del Apache National Wildlife Refuge is the result of a compromise as shocking in some circles as the Sadat-Begin talks. Conservationists and waterfowl hunters have reached an almost friendly standoff, allowing hunters to shoot the plentiful snow goose while in the vicinity of the rare whooper, the very symbol of the endangered species.

The result, a 16-day annual hunt, is surely one of the most peculiar sporting events ever held anywhere, combining the skills of air-traffic control with the confusion of a National Guard bivoauc and the tension of a World War II air raid. "It's rare," admits the refuge director, Richard Rigby. "It isn't exactly your old Chesapeake Bay waterfowl hunt."

Consider the scene back at the tent. The taped lecture ends, and the hunters—wrapped in wool, down and camouflage—are issued tiny transistor radios tuned to a station that plays sounds of a gurgling brook and assorted bird calls. (Later, refuge officials will interrupt these pastoral sounds to give the hunters vital instructions through their earphones.)

Next, each hunter is issued eight shotgun shells loaded with steel shot (shells brought from home must be tested with a magnet to make sure they don't contain lead shot, which would poison birds that ate it after it fell). Finally, after another drawing to assign goose blinds, the hunters unsheathe their guns, pile into the backs of old army trucks and rumble off to the hunt.

From his frigid post atop a 25-foot-high tower of hay bales, Mr. Rigby can see each of the 20 blinds, fashioned from hay and scattered a few hundred yards apart in a corn field ringed with cottonwood trees. Nesting within earshot of this outpost is the most spectacular gaggle of waterfowl and other birds imaginable: 20,000 snow geese; 11,000 greater sandhill cranes; another 20,000 mallards, teats, canvasbacks, ringneck coots and mudhens; a number of Canada geese, blue geese and Ross' geese; six golden eagles, two bald eagles and a partridge in a pear tree—no, it's some Afghanistan pheasant.

TWO OUT OF 78

Standing out in this fairly distinguished crowd, like ballerinas in a disco, are Homer and Ida, two of the only 78 wild whoopers left on earth at last count.

As whooping cranes, the two majestic, snow-white birds are dear enough to ornithologists and conservationists. But their worth goes beyond even that. As adopted offspring of unwitting sandhill cranes from Idaho, they are part of an international foster-parent program that is the most ambitious effort yet to save the species—which sank to only 15 birds in 1943.

By 1975, when the adoption program began, the wild whooper population had climbed to 57. But all those birds lived in one flock that migrates 2,600 hazardous miles each winter from Canada's Wood Buffalo Park to Arkansas National Wildlife Refuge on the Texas Gulf Coast. Biologists feared that having all the whoopers' eggs in one basket was dangerous to the species' chances for survival. So the U.S. Fish and Wildlife Service, the Canadian Wildlife Service and other agencies set out to create a new flock with the safest possible migratory habits.

Luckily, female whoopers lay two eggs each year but hatch only one. So biologists took spare eggs from whoopers' clutches in the remote Canadian nesting ground, packed them in suitcases with hot water bottles and flew them by helicopter and jet to Grays Lake National Wildlife Refuge in eastern Idaho. There they placed the eggs under carefully selected birds in a flock of greater sandhill cranes, close relatives of the whooper. A number of whoopers hatched. And though they experienced their share of "ugly duckling" problems, so far eight have survived to come south to the Bosque area with the sandhills.

Arrival of the whoopers at Bosque in 1975 created a considerable stir, but New Mexico waterfowl hunters weren't about to give up their shot at one of the tastiest snow-goose flocks anywhere. Confusion, rhetoric and anger prevailed at that first hunt, which featured a primitive siren. Each time a whooper took flight, the siren sounded and all hunters had to lay down their guns and stand up in the blinds.

"It's not something I'd want to go through again." Mr. Rigby says, adding that now "it's a nice, fairly workable setup. The biggest difference is that now all the hunters have to pass a bird-identification course.

Before, we were totally responsible; now it's on their shoulders, too.

This particular day, only Homer and Ida are in the refuge, making things fairly simple. Another whooper, Corny, is missing (she will eventually turn up). Two others, Pancho and Miracles, are up on a state refuge nearby, Ulcers, so named because of a habit of flying through the hunt unexpectedly, is not around today. Two other, unnamed whoopers are accounted for elsewhere. And Peanuts, sadly, was killed when he ran into a power line in Wyoming.

THE CRANES ARE FLYING

Soon the sun will pop up over the mountains, and thousands of birds in the wetlands just south of the field will be making their daily flight north, right over the guns of the goose-hungry hunters. Mr. Rigby and his charges are fairly relaxed, but there is an awareness that one mistake could mark a messy end to this strange detente.

Now the geese and sandhill cranes are flying. The hunters, who are allowed to shoot four geese with their eight shells, display their knowledge well, passing up shots at the sandhills and Canada geese; both species are illegal to shoot here.

Then, a few minutes after sunrise, Mr. Rigby's walkie-talkie crackles. This is unit one (which is actually Roderick Drewien of the University of Idaho) to base," the voice on the radio says. "Homer is up and northbound." The action is on. Back at the refuge office, an operator interrupts the bird calls on the hunters' radios to tell them a whooper is headed their way. Then other spotters track Homer's course with binoculars, reporting each change in direction on the walkie-talkies. At one point the spotters lose Homer in the sun, but they soon pick him up again after a few harsh words from Mr. Rigby.

Since the first warning of the little radios, the shots have grown more cautious. Whooping cranes, at four to five feet tall, are the tallest birds in North America and have wingspans of seven feet; they are much bigger and have a much different shape than snow geese. But because they have similar markings—white with black wing tips—there is always room for error. And in the words of hunter Carl Underwood, a 31 year old insurance salesman from Albuquerque, "I'd do just about anything to keep from shooting a $20,000 bird."

Ida's flight, a few minutes later, is similarly routine, as is the rest of the hunt. Around noon, the hunters get back on the trucks, having bagged 17 geese, a modest take for the day. But most are happy. Ralph Libby, a 63-year-old Albuquerque bus driver and his wife, Ethel, are thrilled with their four geese: "It's a lot better than last week," Mr. Libby says. "My radio didn't work then, and it cost me my goose." (Without a radio, he says, he wasn't sure if it was safe to shoot.)

BOTH SIDES SEEM PLEASED

Both hunters and bird watchers seem pleased enough with the detente. Last year more than 80,000 visitors came to the refuge compared to only 30,000 in 1974, before the whooper.

It is easy to see why they come to the Bosque del Apache—the Woods of the Apache. Late in the afternoon, the sun drops behind the mountains, streaking all the sky with a burst of vivid and pale oranges and reds. Thousands of cranes begin coming back to roost in the wetlands. At first, their individual calls are distinguishable—purring, musical trumpets. Soon there are so many that the sky darkens with their presence, and the sound builds to a cacophony, a fluttering, high-pitched roar like legions of Indians war whooping. Then the snow geese follow, honking.

In the distance, as if from a script, an Atchison, Topeka & Santa Fe locomotive sighs a long, low whistle. Homer and Ida have bedded down for another night, oblivious to the fuss being made over them.

WATERWAY USER CHARGES—"SAGA OF A SENATE BILL—II"

Mr. STAFFORD. Mr. President, several weeks ago, Senator WALLOP inserted into the RECORD a number of articles that have appeared in the Washington Post on the "Saga" of the waterway user charge bill. This series by T. R. Reid has detailed Senator DOMENICI's efforts to establish greater balance to our national transportation program.

Since that time, three additional articles in the series have appeared. Because of the significance of this issue and this excellent indepth series of articles, Mr. President, I ask unanimous consent that these three new Post articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

WATERWAY FEE BILL RAN AFOUL OF CROWDED SENATE SCHEDULE

(By T. R. Reid)

The 95th Congress called it a session and went home Thursday night after a busy year that saw the passage of 24 private laws, 210 public laws, and nearly a thousand assorted resolutions—but not the waterway toll bill.

And so the waterway bill, S. 790—which would require barge lines to pay some fee for their use of federally maintained inland waterways—will be held over for final Senate action sometime after the second session begins next year.

Just a few weeks ago the waterway bill had seemed almost certain to emerge as a waterway act before the end of the 95th's first session. Both the House and Senate had voted for some kind of waterway charge, and the question remaining before the Senate was no longer "whether" but simply, "How much?"

But late in October the barge bill ran aground on a Senate schedule crowded with more urgent legislation. And when the majority leader, Robert C. Byrd (D-W. Va.), finally offered to squeeze in a waterway vote somewhere, senators on both sides of the issue turned him down—because neither side was sure it had enough votes to prevail.

With the final Senate vote delayed until late January at the earliest, various groups of lobbyists were meeting here to plan their efforts to pressure the members of Congress on their home turf during the interlude between sessions.

The barge industry, which has reluctantly come to the realization that some form of waterway charge is imminent, was building a campaign to push for Senate approval of the House bill, which established a relatively moderate fuel tax for the barges.

The railroads, the barge lines' arch competitors, were gearing up for a nationwide lobbying drive to convince the Senate to vote again for a much stiffer user charge plan that had passed the Senate by a narrow margin in June.

Although senators and lobbyists on both sides were insisting that they had no interest in a compromise solution, just about everybody involved in the battle had privately prepared his own version of a waterway bill that would fit somewhere between the House and Senate plans.

But nobody in Congress knew precisely where an acceptable compromise might be found. In fact, nobody in Congress could know, because the final arbiter of an "acceptable" waterway charge will be President Carter—and he doesn't seem to have made up his mind.

Carter holds the key to the waterway bill because he has promised to hold up federal funding for a major new barge facility—Locks and Dam 26, at Alton, Ill.—unless Congress establishes a "substantial" waterway fee.

The barge industry sorely wants that Alton project, and has told its supporters in Congress to vote for a waterway fee in order to win Carter's support.

But the bargemen cannot tell their congressional friends how large a fee to vote for, because Carter has not yet said just what he would consider "substantial."

That question is a subject of dispute within the Carter administration.

The Department of Transportation, which has jurisdiction over barge traffic, has been urging the President to accept just about any fee that Congress decides to pass. Since the inland waterways have been toll free since the birth of the republic, the transportation experts say it is enough to establish the concept of a barge charge this year. The tolls can always be raised later, they say.

But in the White House, a youthful corps of analysts in the President's Domestic Council and the Office of Management and Budget is taking a harder line. The Alton project offers leverage that will force Congress to approve a hefty waterway fee, as the analysts see it. The President should hold out for a significant barge charge.

Eventually, the President will have to resolve the issue and tell Congress what a "substantial" waterway fee might come to. For now, though, Congress has adjourned, and Carter will have plenty of time to mull over his position on S. 790.

BYRD SCHEDULES VOTE THIS WEEK ON WATERWAY TOLL BILL

(By T. R. Reid)

The Senate was droning through a laboriously long-winded debate on Title 18 of the U.S. Code one day last week when the majority leader, Sen Robert C. Byrd (D- W.Va.), interrupted with a brief announcement that electrified friends and foes of S. 790, the waterway toll bill.

Spurred by the heartfelt plea of a frustrated colleague, Byrd told the Senate that he would schedule a final vote sometime this week on the controversial bill, which would impose the first time a user fee for commercial barge moving freight on the nation's inland waterways.

For the senators, staff aides and lobbyists who have been working 10 months in support of or in opposition to the waterway toll, Byrd's announcement came as a shock. They had expected the bill to reach the floor early this year, but now they would have only days to marshall their arguments and push for votes.

Sen. Pete Domenici (R-N.M.), S. 790's sponsor, and the railroad and environmental lobbies aligned with him, were pushing the Senate to approve once again the waterway bill it approved last June.

That measure established a tough fee schedule that would recover more than half of the hundreds of millions of dollars the federal government spends annually on inland waterways.

On the other side, Sen. Russell B. Long (D-La.) and a coterie of barge industry lobbyists and farm groups were asking senators to vote instead for a considerably different waterway tax that the House passed in October. The House bill would be much less a burden on the barge operators, and would return less money to the government.

The barge industry isn't exactly enchanted

with a waterway fee. But Domenici had trapped it.

Early last year the senator had attached his waterway proposal to an authorization bill funding a major new barge facility on the Mississippi at Alton, Ill. The barge operator had never managed to separate the two, and now they had no choice; to get the Alton project, they would have to pay some level of waterway fee.

The barge lobbyists were taking a calculated risk in asking senators to vote for the modest House version of the waterway fee, because last fall President Carter jumped into the fray on Domenici's side.

In a letter signed by Transportation Secretary Brock Adams, the administration promised it would veto any authorization for the Alton barge facility unless Congress passed a waterway fee higher than that proposed in the House bill.

But Long and his supporters, including Sen. Adlai Stevenson (D-Ill.), maintain that the President is bluffing. "I think the Senate should approve the House-passed waterway fee," Stevenson said last week. "And I think the President, on reconsideration, would gladly sign it."

The waterway bill has been pending on the Senate floor since last October, but it had been in a legislative limbo because no one was pushing to bring it up. Neither Long nor Domenici was confident he had enough votes to win. Both men had been biding their time.

It was a neutral party, Sen. Mike Gravel (D-Alaska), who moved Byrd last week to schedule a vote.

As chairman of the Senate's water resources subcommittee, Gravel has sat through hearings year after year on the issues of the waterway toll and the Alton barge facility.

"None of this has anything to do with Alaska, you know," Gravel has observed. "And the thing never goes away. It's a hair shirt; what have I done to deserve this?"

When Gravel saw that both sides were stalling, he panicked. If the impasse went on much longer the whole waterway mess might be thrown back to him for more hearings. When he saw Byrd on the floor last week, Gravel made a personal plea for a quick vote that would decide the fate of the waterway fee.

Byrd, who was eager to clear away as many minor bills as possible before the Senate swims headlong into the Panama Canal debate, agreed. The waterway toll bill was once again on its way.

ADMINISTRATION GETS TOUGH AS VOTE ON BARGE FEES NEARS

(By T. R. Reid)

The time had come, the secretary of transportation told the president, to get tough on the waterway toll bill. The administration's credibility was on the chopping block; they'd have to act, now, to avert the ax.

The weekly Cabinet meeting had just ended. As the business suits and briefcases filed out the Cabinet Room, Brock Adams buttonholed Jimmy Carter. You don't get that many chances at a president, even if you're secretary of transportation, and Adams knew his message for Carter couldn't wait.

The message: the waterway bill, a controversial measure that would impose, for the first time, a user fee on barge lines moving freight on inland waterways, was coming up for a final vote in the Senate—probably the first week in February.

With Carter's backing, the Senate had passed S. 790, which established a strong waterway fee that would recover a large share of the government's annual expenditure on waterways. But the House had passed a much weaker bill. Now the issue was back in the Senate, and Adams had threatened, in writing, that Carter would veto the bill unless the Senate voted a fee substantially higher than the House version.

The problem was that a lot of senators—Democrats, influential ones—didn't believe that threat. At the urging of the barge industry, they were insisting they would vote for the House bill and then pressure the president to sign it.

If that happened, Adams said, the administration's final deterrent in its dealings with Congress—a veto threat—would be fatally defused.

The president told the secretary not to worry. The White House, he said, would take care of things.

It was a little vague, Adams told his allies in the Senate, but it was reassuring. Almost from the day last October when Adams had written his letter posing the veto threat, a lot of senators had insisted they didn't believe him. Good Democrats like Russell B. Long (La.), Adlai Stevenson (Ill.), and Warren G. Magnuson (Wash.) had been talking openly about "calling the president's bluff."

It got so bad that Sen. Gaylord Nelson (D-Wis.), an old friend, called Adams with a warning. "You've got a problem here, Brock," Nelson said. "If we pass the House bill, and Carter doesn't veto, your credibility is going to be mincemeat around here."

Adams' staff, too, had some moments, around the first of the year, when they feared a softening of backbone on the question in the White House.

They knew that Long had discussed the question with Carter himself, and then reported back to his colleagues that the president was not exactly breathing fire on the question. "He might veto, and he might not," Long told the other senators with a mischievous grin.

Within the White House, there was a degree of schizophrenia on the waterway toll. Frank Moore, the president's chief lobbyist, was pushing the president to reconsider—he would need Long's help on a lot of things more crucial than a barge charge bill. But Stuart Eizenstat, Carter's domestic issues expert, was taking the hardest possible line on behalf of a tough waterway fee.

Last weekend, Adams' own lobbying team had met in the White House with the various factions, but nothing had been firmly decided.

That was why Adams felt the need, after last Monday's Cabinet meeting, to take up the matter with Carter himself. The president's guarantee that something would be done made him feel a lot better.

Within hours after the meeting, something was done. Adams received a brief note on White House letterhead, signed by Richard G. Hutcheson III, Carter's chief paper shuffler. "Let our position be clearly known," Hutcheson quoted Carter as saying, "including possibility of veto."

It wasn't all Adams might have hoped for, but it was probably enough. The memo was quickly copied and dispatched to the Senate. It ought to scare those Democrats enough, the secretary thought, to make them vote for something more than the House-passed waterway fee.

In the Senate, meanwhile, Russell Long came down with the flu. The waterway bill, which had been scheduled for a vote on Thursday, would have to be put off until next week. Brock Adams would have to hang on a few more days.

COSMETIC SAFETY AMENDMENTS

Mr. EAGLETON. Mr. President, some of my colleagues are probably aware of my continued efforts to upgrade our now meager laws in the area of cosmetic regulation.

I first introduced a bill in this area in 1973. Not until July of 1976, was the bill taken up by the full Senate and passed. No action was taken by the House of Representatives prior to the end of the 94th Congress.

On December 15, 1977, I again introduced cosmetic safety amendments. In my view, never has the evidence of need for strengthening our existing laws been so persuasive.

Mr. President, I commend to my colleagues two recent articles from the Washington Post and ask unanimous consent that the text of both articles be printed in the RECORD at the conclusion of my brief remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. EAGLETON. Mr. President, the first article indicates the support of the Food and Drug Administration for strengthening existing regulatory authority for cosmetics. Commissioner Kennedy indicates that he is "anxious" to have the authority to require premarket testing. My bill would clearly give him that authority.

A GAO spokesman cited as deficiencies in the present law the fact that FDA has been refused access to product formula data and consumer complaints because it has no authority to require manufacturers to permit FDA inspectors access to these records. My bill would require registration of all formulas with the FDA, and periodic submission of adverse reaction reports, in addition to inspection authority.

The second article, published February 3, details the findings of a GAO study that about 100 ingredients listed as suspected carcinogens by NIOSH's Registry of Toxic Effects of Chemical Substances are found in cosmetics. This article further emphasizes the need for strengthening the Federal food, drug, and cosmetic law as it relates to cosmetics.

Mr. President, we must act now to insure that the Federal agency charged with the responsibility of regulating the $6 billion a year cosmetic business can do so effectively.

I urge my colleagues to study my bill, S. 2365, and join with me in working for rapid enactment of this important consumer measure.

EXHIBIT 1

[From the Washington Post, Feb. 3, 1978]

MORE THAN 100 SUSPECT COSMETIC INGREDIENTS UNREGULATED, GAO STUDY FINDS

(By Ward Sinclair)

More than 100 ingredients suspected of causing cancer and birth defects are available for use in cosmetics, virtually free of federal regulation, congressional investigators have found.

A General Accounting Office survey of cosmetics, to be delivered to a House subcommittee today, found that millions of consumers may be exposed to "significant hazards" from the ingredients of beauty products.

The GAO report is critical of the Food and Drug Administration for alleged laxity of enforcement of existing federal cosmetics law.

But the GAO also determined that the law does not provide adequate powers for FDA to protect consumers from potential health hazards.

GAO's investigation will be discussed in detail today by the Interstate and Foreign

Commerce oversight subcommittee, headed by Rep. John E. Moss (D-Calif.).

The subcommittee also will hear from FDA Commissioner Donald Kennedy and, according to Moss aides, discuss legislation to ban the use of cancer-causing coal tar dyes in hair-coloring products.

The GAO report did not specify which of the potentially harmful ingredients are being used in cosmetics, nor did it name cosmetics that contain them.

But the investigators found that dozens of suspect agents are on the market, out of the reach of federal control, for use in cosmetics. They included:

About 100 ingredients listed as suspected carcinogens by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances.

Twenty-four ingredients listed in the registry as suspected of causing birth defects.

Twenty more that may cause adverse effects on the nervous system, including headaches, drowsiness and convulsions.

GAO noted that products listed on the NIOSH registry had been tested on laboratory animals and that their correlation to cosmetics exposure has not been evaluated.

But, the report continued, the Food, Drug and Cosmetic Act—which partially governs cosmetics content and labeling—does not give the FDA sufficient authority to assure that the products are harmless.

A specific exemption in the act bars the FDA from banning or restricting the use of coal tar dyes in hair-coloring products used by an estimated 33 million people.

Increasing evidence has shown that some colors used in coal tar hair dyes are capable of causing cancer in consumers, and the FDA has proposed warning labels for such products.

The Cosmetic, Toiletry and Fragrance Association (CTFA), an industry group, has opposed the FDA move. Association officials have maintained that no major hair dye manufacturer has used benzidine-derived colors—one of the major suspected carcinogens—in their products since 1973.

GAO investigators, however, recently purchased eight temporary rinses containing one or more of the benzidine-derived colors at drugstores in Rockville. The manufacturer, not named by GAO, is a CTFA member.

The GAO report that will be discussed today calls for a repeal of the exemptions for coal tar hair dyes.

GAO said that while the FDA does not have certain regulatory powers that would be helpful—such as a requirement that manufacturers test their cosmetics for safety—it could do a better job with the powers it has.

The investigators found that FDA has not inspected most plants or sampled products, as it is empowered to do. It has not established manufacturing standards, nor has it forcefully followed up with penalties after discovering violations of the law, GAO said.

GAO said the FDA has been lax in requiring warning labels on suspect products, and noted that some ingredients banned in other countries are available freely here without challenge by the FDA.

The agency also was criticized for failing to establish regulations limiting color additives that are not safe for use in cosmetics and for not establishing tests for safety evaluation of cosmetics.

[From the Washington Post, Feb. 4, 1978]

FDA CHIEF ASKS HILL FOR MORE POWER TO REGULATE COSMETICS

(By Mary Russell and T. R. Reid)

Food and Drug Administrator Donald Kennedy yesterday asked Congress for additional authority to regulate cosmetics and hair dyes that may contain cancer-causing chemicals.

Kennedy told a House Commerce subcommittee that a 1938 law exempting coal-tar hair dyes from an FDA ban should be repealed in light of recent National Cancer Institute studies showing that major ingredients of coal-tar hair dyes cause cancer in rats.

A General Accounting Office survey showed that more than 100 ingredients suspected of causing cancer, birth defects and nervous system disorders are available for use in cosmetics. Kennedy said his agency lacked authority to regulate the industry.

To show that the cosmetics industry is actually using the ingredients, GAO auditors bought products in Washington area stores with some of the suspect chemicals in them, and brought them to the committee hearing yesterday.

GAO auditor Jim Linz emphasized later that there is no evidence that the products cause cancer or that the ingredients are used in sufficient amounts to cause cancer. "What we were trying to do was to avoid the charge that none of the products now on the market are using those ingredients. We're pointing out that FDA needs additional authority to require the manufacturers to prove the safety of the products and the ingredients in them."

The GAO compared the ingredients in the products with chemicals labeled suspected carcinogens and suspected causes of birth defects and nervous disorders by the National Institute of Occupational Safety and Health Registry of Toxic Effects of Chemical Substances.

The products included Aim toothpaste, Grecian Formula 16 hair dye, Clairol Kindness Instant Protein Hair Conditioner, Clinique Clarifying Lotion 2, Helena Rubenstein Contour Lift Film and Helena Rubenstein Ultra Feminine Emollient Cleansing Cream EDTA, Max Factor super lash, eye pencil and Maxi-wear Nail Guard and Revlon Super Crystalline nail enamel.

Dr. Norman Estrin, vice president for science of the cosmetic industry trade group, the Cosmetic Toiletry and Fragrance Association, said, "It was very misleading and irresponsible of the GAO to parade a list of products in front of the cameras. Any competent scientist who's reviewed the registry knows that inclusion of a chemical there does not make it a carcinogen. Common table salt is included in that list and so is carbon dioxide, which we breathe out."

A spokesman for Lever Brothers, the makers of Aim, said it stopped using sodium and potassium carrageen, suspected of causing cancer in animals, in mid-1977 "based not on safety, but cost factors."

Sodium saccharin, the other ingredient, is used in an amount "so infinitesimal that a person would have to brush his teeth 12,000 times a day" to achieve "the massive doses fed to rats" in one study.

A spokesman for Combe Inc., which makes Grecian Formula 16, said the lead acetate, an animal carcinogen, in the product is there "in minute amounts and does not penertate the skin. I think these charges are irresponsible."

A Clairol spokesman also said it was "irresponsible," and added that the suspected carcinogen used in its hair conditioner has molecules "too large to be absorbed through human skin."

A Helena Rubenstein spokesman said carrageen (Irish moss) is a thickening agent most commonly used in food such as salad dressing. "It's always been considered a very inert substance."

Clinique said it had removed trichloroethylene from its product, though it's possible some stocks of the old formula are still in stores.

Max Factor said, "We are members of CTFA and stand by the CTFA statement."

A spokesman promised a "detailed response" to the GAO testimony at a later date.

Revlon's Super Crystalline nail enamel was listed because it contains Toluene, which the GAO identified as a suspected carcinogen in animals and a suspected teratogen (an agent that causes malformed fetuses). Roger Shelly, of Revlon, said that every nail enamel includes toluene, and that he knew of no previous warnings about the substance.

Kennedy admitted that the FDA had not fully used the authority it has to regulate cosmetics. But he added that the resources of the agency were limited and they had concentrated their activity in the two areas where they had more authority—foods and drugs. "Only a silly manager would overinvest in a cause that would only see his resources chewed up."

Kennedy said he was "anxious" to have the authority to require premarket testing. He denied an industry charge that it would be applied every time there was the minutest change in a formula, but said it would only be applied to important product ingredients and significant combinations of ingredients.

Gregory J. Ahart, director of the human resources division of GAO, who presented the GAO testimony, said FDA lacks authority to require compliance with the regulations it does set, does not have authority to require testing and has been refused access to records such as formulas used and consumer complaints because it has no authority to require manufacturers to permit FDA inspectors access to such records.

Legislation has been introduced in the Senate to broaden such authority. Reps. Andrew Maguire (D-N.J.), Albert A. Gore Jr. (D-Tenn.) and James J. Delaney (D-N.Y.) have introduced legislation to repeal the coal-tar exemption.

DEVILS LAKE, N. DAK.

Mr. YOUNG. Mr. President, for years there has been increasing ill feeling on the part of most people in the Devils Lake area of North Dakota and particularly between farmers and the Fish and Wildlife Service. The Devils Lake area is one of the best waterfowl producing areas of the United States.

It is unfortunate that this ill will between farmers and the Fish and Wildlife Service is increasing rather than decreasing as it should.

I ask unanimous consent to have printed in the RECORD an editorial of January 20, 1978 by the managing editor of the Devils Lake Daily Journal, Devils Lake, N. Dak., entitled "Farmers May Take Last Resort Action For Flood Project."

I believe John Zaleski, Jr., accurately expresses the feeling of most people of that important waterfowl area of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARMERS MAY TAKE LAST RESORT ACTION FOR FLOOD PROJECT

(By John Zaleski Jr.)

Folks around here call it "the wildlife."

That's the term they use to describe all kinds of groups associated with environmental, conservation or sportsman and hunter activities. And the description seldom is used in a favorable sense. Rather, when people in the Devils Lake area speak about "the wildlife" they usually do so in angry or disgusted expletives.

Why?

The reasons are many, but the primary cause of the bitter feeling against wildlife groups stems from the wetland acquisition program of the U.S. Fish and Wildlife Service (FWS) of the Dept. of Interior. That's where the trouble started, and that's where most of it rests today.

Because of clumsy policies and practices of FWS, nearly every government and private group associated with wildlife is looked upon in the Devils Lake area with disfavor. Lake Region residents perceive the actions of FWS as nearly the same as radical environmental groups like the Audubon Society and Sierra Club. Often that perception is accurate. The result has been a blurring of the distinction between government agency and private organizations.

It's a serious matter, especially because Lake Region residents find themselves in the last remaining prairie pothole region in the lower 48 states. The mandate to FWS from the U.S. Congress is to preserve those remaining wetlands—preserve as many as possible. That directive has brought the interests of wildlife in head-to-head confrontation with the interests of agriculture.

The private groups, while not part of government, seem to have an inordinate influence over government policies. The most visible example is the Audubon-Interior agreement which effectively has stopped the Garrison Diversion project. Closer to home, local water boards find their flood relief projects stymied by lawsuits. A lawsuit lodged against the U.S. Army Corps of Engineers by the National Wildlife Federation threatens to kill the Channel A project in Ramsey County.

It is very understandable, therefore, that people around here detect a sinister conspiracy between government and unreasonable environmental groups. It is very difficult to find any evidence to the contrary.

The backlash among landowners in the Devils Lake Basin started a long time ago. Roadblocks placed in the path of needed flood control measures, like Channel A, apparently cannot be removed by reasoned compromise. Most environmental groups seem unable or unwilling to compromise. Farmers in the Devils Lake Basin again are beginning to talk about flexing their muscles.

Their muscles? Their muscles are their land resources.

One fact is clear: The majority of lands on which ducks are raised, geese are fed, deer are hunted and foxes are trapped, is in private ownership. Hunting and other recreational pursuits are allowed only at the okay of the landowner. Environmental radicals apparently don't like that situation. They seem to have an unbending penchant for the concept of "public lands."

Thus, the "conspiracy" between preservationists and certain elements of government takes on an even more sinister complexion. It becomes now an indirect attack upon the system of private ownership of rural lands. It becomes a serious attempt to gain control of the nation's basic resource—land.

A glance at a map showing FWS fee title and easement acreage in the Devils Lake Basin appears to confirm the trend.

How then, does the farmer and landowner in the Devils Lake area get the attention of the nation? How does he communicate to the majority urban population of the country that the very base upon which the nation's food production depends is threatened by the elitist conceptions of a few in government and environmental organizations? How indeed.

Again, the farmers' muscle is their land resource. The urbanite who wants to spend a few days hunting geese in North Dakota must, for the most part, have the landowners' blessings. No blessing, no hunting.

It seems, therefore, that the only way to get the proper attention to their sheetwater flooding plight, to the continued encroachment of federal land acquisition of private lands, and to the determined efforts of certain radical preservationists to destroy an efficient agricultural machine—it seems drastic action is necessary.

Close as much land as possible to hunting waterfowl. Lock it up as tightly as possible for an entire waterfowl hunting season. Make it especially difficult for the urban hunter from in and out of state to hunt in the Devils Lake Basin. Make it sparkling clear to the hunters and to the nation the reasons for the landowners' action.

That kind of action gets attention. And attention to the sheetwater flooding problems in the Devils Lake Basin is long overdue. Conservation and wildlife groups, and even some hunters, are fond of telling folks of the wonderful wetland and waterfowl resources in the Devils Lake area. But they fail to communicate the perennial problems of flooding in the region.

If it takes that kind of drastic action to force compromise between farming and wildlife interests, then such action should be taken. And in light of recent developments concerning Channel A, the effort should begin.

This is the only part of the country where "the wildlife" is seen in a negative light. In fact, employees of FWS recognize service at Devils Lake as the toughest of any of their agency's field offices. The conflicts between the federal agency's mandate to preserve wetlands and the practices of modern farming are most intense here because of the inherent value of both concepts.

But the apparent failure of wildlife interests to accept reasonable compromise regarding flood relief projects for farmers, requires agricultural interests to use their best weapons.

Closing land to hunting isn't the kind of action most of us would like to see. But support for projects like Channel A is general among people who have studied the project fairly. That includes city and county commissioners, chambers of commerce members, and merchants up and down the main streets of the Devils Lake Basin who realize their business depends upon the economic health of the farming community.

It's a last resort, but farmers in this area have been pushed to it.

GROUND HOG ENERGY INDEX

Mr. DOMENICI. Mr. President, in this ever-changing world, even our simplest and oldest traditions have taken on new meaning. It is said only those traditions which remain relevant and meaningful survive.

Therefore, I would like to include in the RECORD the modern technological implications and interpretations of our Ground Hog Day.

Mr. President, I ask unanimous consent that the lighthearted Ground Hog Energy Index statement of George L. Gleason of the American Nuclear Energy Council, given while testifying on the fiscal year 1979 budget before the House Science and Technology Committee, be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GROUND HOG ENERGY INDEX

In cooperation with the Head Ground hog at Punxsutawney, Pennsylvania, we have established the Ground Hog Energy Index. According to preliminary data coming out of this project, on any ground hog day on which the ground hog sees its shadow, the ensuing 6 weeks of bad weather means the burning of an additional 1.5 million barrels a day of oil or a total of 63 million barrels. This increases the cost of electric power by about $560 million, about half of which comes directly out of the consumer's pocket. It also increases our balance of trade deficit approximately $0.8 billion, or about 3 percent.

Under this index, for any years in which the ground hog sees his shadow, the forward energy situation is described as "serious." If he sees it two years in a row, we describe it as "acute"; and three years in a row as "catastrophic."

We bring this to your attention because, after looking at this budget, it is clear that the Ground Hog Index is at least as sophisticated as the system now used by DoE to forecast energy supply and demand. In fact, when they heard about our study DoE asked for a copy and I understand that after an environmental impact statement is prepared and Freedom of Information requests from NRDC are disposed of, they will be issuing it for comment and public hearing. The rumor is that they may adopt it as a benchmark for the National Energy Plan, Phase II.

By the way, I regret to report that the ground hog did see his shadow today so it looks like we may still face a "serious" energy crisis yet this winter.

TELEPHONE PRIVACY ACT

Mr. ANDERSON. Mr. President, on January 31, 1978, I shared with my colleagues a Washington Post editorial endorsing the concept of the Aspin-Anderson Telephone Privacy Act, S. 2193. Entitled "Hold Those Calls," the January 23, 1978, editorial asked readers with strong feelings on the subject to comment to the Post—in writing.

This morning, the Post's "Letters to the Editor" column carried some of the comments the newspaper received in response to the editorial. For the most part, these letters are representative of the more than 400 letters I have received on the subject since introducing S. 2193 in October 1977. I would only add that, in addition, I have received numerous letters from the elderly and handicapped who answer their phones in spite of great physical hardship and who are particularly irritated to have their efforts rewarded by a sales pitch for insurance or magazine subscriptions.

Mr. President, I ask unanimous consent that this morning's Washington Post "Letters to the Editor" column be printed in the RECORD. I feel that my colleagues can better understand both the seriousness of this problem and the wide support for remedial action by hearing from those who would benefit from the Telephone Privacy Act—the consumer. I ask that those Members of this Chamber who have not done so join me as a cosponsor to S. 2193 and demonstrate their support for our citizens' right to privacy.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

STRONG FEELINGS ABOUT "HOLD THOSE CALLS"

(EDITOR'S NOTE.—These letters are a sample of the responses to a Jan. 23 editorial that invited comments from readers with strong feelings about unsolicited commercial phone calls—especially those made by machines. To date we have received 46 letters, of which 45 objected to such calls.)

In response to your editorial ["Hold Those Calls," Jan. 23], you may definitely include this letter with the many others you will receive from people who have strong feelings about "junk" phone calls.

In fact, I have yet to become the victim of one of these little horrors but the prospect makes my mind boggle, my heart grow faint and my stomach churn. It's bad enough to trek through the snow to find only litter in the mailbox. It's worse to interrupt what one is doing (eating, sleeping, nursing the baby) to be flung a "live" spiel for anything from aluminum siding to cemetery lots. But to answer the phone simply to hear a recording that won't even free your line when you hang up on it—in a word, AARGH!

LOUISA P. WELLEMEYER.

Alexandria.

I consider unsolicited phone calls to be one of life's minor outrages. My present form of revenge consists of making certain I have the name and address of the call's sponsor so that I can keep a list of companies with whom I swear never to do business. I tell this to the caller and sometimes write directly to the company.

I dream of getting the home phone numbers of company executives whom I could call at the dinner hour to tell them what I think of their sales methods.

MARY EPREMIAN.

Alexandria.

I'm with you. This invasion of our privacy must be stopped. However, I disagree with the last sentence of your editorial: "If public sentiment is emphatic enough, perhaps the solicitors will get the message and hang up." My experience has been that where possible money is concerned, sentiment goes out the window. The only thing the unsolicitous will understand is mandataory regulation.

HARRY EARL TAYLOR.

Rockville.

It doesn't take much imagination to consider some of the serious consequences that could ensue if robot calls are not stringently controlled. Serious illness or accident can require immediate, unimpeded access to a physician, ambulance service, rescue squad or the police. A robot call that stayed on the line until the tape has run its course could be an impediment. At least with the human salesman, babbling happily away about his or her book, you can tell them to get off the line—pronto.

MARY LOUISE BROWN.

Washington.

You may quote me: "I will never buy anything advertised over the phone."

DOROTHY A. STRAUSBAUGH.

Bethesda.

Your editorial points to the lack of logic in attempting to control unwanted commercial solicitations by telephone through the mechanism of outlawing particular dialing devices. I would add that there is an equal lack of logic in imposing the responsibility for maintenance and use of no-call lists upon telephone companies simply because telephone companies provide the facilities through which calls are made. Policing is a governmental responsibility, and, borrowing your editorial's use of analogy, calling upon the telephone companies in this respect is tantamount to calling upon automobile manufacturers to enforce speed limits, or calling upon the U.S. Postal Service to maintain lists of people who do not wish to receive junk mail.

O. O. ASHWORTH, Jr.

The summons of a telephone ringing brings a negative emotional response in many people. Like winter weather reports, the message has a 90 percent chance of being bad news: Somebody *wants* something, if only an hour or two of our time that perhaps we can't or don't want to spare.

Recognizing this possible resistance, many sensitive callers are asking now if one has the time, or would a later call be better. The phone is, let's face it, an interruption of necessary or pleasant pursuits and really important types are inclined to hate the damn thing.

Please do whatever you can to put a stop to commercial calls. They're too annoying.

VIVIAN MCMAHILL.

Washington.

The day I get a machine-made phone call I'll give them a response that will curl their recording tape right around their ears.

ALOISE M. BELL.

Falls Church.

I have not received any of those obnoxious automated calls, but I'm furious and appalled at the very idea. I *never* buy anything as a result of telephone solicitation. Junk mail is bad enough, but at least I can read and consider that at *my* convenience, or throw it out unopened.

If this automated horror isn't unconstitutional as an entirely unwarranted invasion of privacy, it should be. If the practice continues, I hope Congress will quickly pass a law banning it, before 1984 is fully upon us with its shrill, demanding, insulting and dehumanizing arrogance.

ELAINE LEWIS.

I fully endorse the idea that a person should be on a no-call list with his telephone company, if he desires it. Why should a telephone I pay for be used to annoy me?

I am a non-working wife, and after 22 years of unsolicited phone calls and door-to-door salesmen, I can hardly be civil to charities, religious callers and Girl Scouts selling cookies. The thought of machines increasing dramatically the number of unsolicited phone calls I receive upsets me very much.

I recently moved here from Camarillo, Calif. where door-to-door soliciting was not allowed. It was wonderful! I am less annoyed by junk mail because I can ignore it but wonder if mail service wouldn't improve if there were a curtailment in the volume of junk mail.

I hope you have a huge response against the machines—if people aren't too busy answering the phone or the door or sorting the junk out of their mail.

JOAN MACDONALD.

Alexandria.

If their computer doesn't mind talking to our answering machine when we are not at home, we do not mind an occasional such call, so long as there is not more than one on the same topic.

A marketing firm would probably not go to the expense of mass phone calls unless the product or service they were selling had broad appeal. It is always possible to abbreviate the listening time by hanging up. People who do not want any such calls should be able to be placed on a telephone company "don't call" list.

ROBIN FICKER.

Bethesda.

For people living in Washington, the policy of The Post's circulation department is more relevant than the editorial department's. Does the circulation department concur with your editorial policy about limiting telephone solicitation?

ROBERT ELLIS SMITH,
Publisher, Privacy Journal.

Washington.

Your editorial raises a larger issue than perhaps you realized: Why is it that so many people do get up from dinner or out of the bathtub whenever any unidentified person—or, these days, even machine—decide it suits his or her or its convenience to interrupt? One of the truly peculiar characteristics of many people is that they respond to the damnable bell reflexively, without the slightest regard for their own convenience.

As a matter of political principle, I am unalterably opposed to government intervention in the conduct of business. Junk calls, however, emphatically are not the mere conduct of business. They are, in fact, acts of violent trespass. Thanks to this diabolical new means of intrusion, a state of emergency exists.

ROBERT S. KEEFE.

Lexington, Va.

Regarding your editorial about unsolicited phone calls, please be informed that in our family we consider the telephone an instrument for our convenience, especially since we are paying for it.

I have already been in touch with the Haines Co. in Cincinnati, Ohio, and have been taken out of their annual directory, which has eliminated some unwelcome phone calls, an intrusion I strongly resent.

Anything you can do to rouse public opinion to eliminate people being disturbed by unwelcome soliciting will be most appreciated.

EVA MILBURN.

Arlington.

U.S. FOREIGN POLICY: DRIFT OR DESIGN?

Mr. BAKER. Mr. President, on the 19th of January my good friend and colleague, the senior Senator from Maryland (Mr. MATHIAS) delivered an address before the Los Angeles World Affairs Council entitled "U.S. Foreign Policy: Drift or Design?" It is a thoughtful and comprehensive statement on America's foreign policy; and in order to make it available to all my colleagues, Mr. President, I ask that it be printed in its entirety at the conclusion of these remarks.

The principal theme, Mr. President, is that the American people have been offered no comprehensive vision, no overall plan into which the various foreign policy initiatives of the Carter administration, many of them commendable in and of themselves, can logically be placed, explained and understood. Senator MATHIAS notes that such issues as the Panama Canal or foreign assistance could much more easily be accepted by the American people if they were presented in the context of a coherent and comprehensive foreign policy.

The Senator explains clearly that the long-term security of the United States is a much larger issue than our relationship with the Soviet Union or the size of our defense budget. The security of the United States is dependent on our willingness and ability to work among the community of nations to develop global solutions to global problems. Our security requires a recognition of the interdependence of nations and of the link between assistance to the developing world and America's dependence on foreign natural resources.

He concludes with the thought that a comprehensive vision of what America's foreign policy should be and a bipartisan foreign policy go hand in hand. A foreign policy formulated by the bipartisan participation of the Congress and the

administration and comprehensively stated would mark a needed return to a national foreign policy. I would urge the administration to heed this call and express my belief that the Congress would enthusiastically support this effort. I commend, Mr. President, the "vision" of Senator MATHIAS to my colleagues.

Mr. President, I ask unanimous consent to have Senator MATHIAS' speech printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

U.S. FOREIGN POLICY: DRIFT OR DESIGN?

As recently as 100 years ago a British envoy in East Asia boasted that he could "declare war and make peace" before the news ever reached Whitehall.

Now, the most remote outpost of the world is only hours away. Two days ago, I was in the Peoples Republic of China. Tomorrow, I will be in Washington. This telescoping of time and space has profound and inescapable implications for our foreign policy.

The planet we live on is very small, and gets smaller every day. The problems we face are not local. They are universal. Everyone on earth shares them, which makes for a very complex, interdependent world.

The days when America could afford a foreign policy of splendid isolation are long gone. The development of intercontinental ballistic missiles and of an insatiable appetite for energy are but two of the things that foreclose that option.

Like Puck, we can almost "put a girdle round the globe in forty minutes." But, without Puck's magical ability to undo the mischief he created, we must be very careful how we use our powers. We cannot expect to dictate our vision of the future to others, neither can we afford to be without such a vision.

In my title, I question whether our foreign policy is by drift or by design because, while President Carter has moved boldly on a range of issues, he has not projected a vision of what America's role in world affairs should be as we approach the 21st Century.

It seems this omission is intentional.

Leslie Gelb, the President's new Director of the State Department's Bureau of Politico-Military Affairs, explains that, "The Carter approach to foreign policy rests on a belief that not only is the world far too complex to be reduced to a doctrine, but there is something inherently wrong in having a doctrine at all." In other words, we are now to have a pragmatic, issues-oriented foreign policy.

Both President Carter's aborted trip to eight countries on four continents in 11 days and his just-completed trip to seven countries on three continents in nine days were designed to underscore the new issues and new areas that demand a place in our foreign policy. I agree that new issues and new areas demand attention. But I question the President's approach to the problem. By choosing to barnstorm the world to dramatize an idea at home, I think President Carter has badly underestimated both the sophistication of the American people and the validity of the idea.

The American people will support a forceful foreign policy, even when it involves risk and sacrifice. But they will not support a foreign policy that lacks coherence and direction. People do not need spectaculars to help them understand the new imperatives of a changing world. They do need leadership that can articulate a comprehensible vision of where our foreign policy is heading and why.

For example, the Panama Canal is difficult to explain and to sell to the American people as an isolated issue. But, Panama Canal Treaties, presented as one facet of a larger perceived vision of our role in an interdependent world, would be a different thing. The American people must understand the global context in which they are being asked to support the Panama Canal Treaties, a SALT II agreement, expanded foreign aid and so on. When they do understand the equities involved, I am confident they will respond appropriately.

Woodrow Wilson discovered, to his regret, the consequences of getting ahead of his constituency on the issue of United States participation in the League of Nations. I hope President Carter will learn from his example and not make the same mistake.

The world we live in today has little room for big mistakes. Military power remains concentrated in the arsenals of the Soviet Union and the United States. But, the nuclear club is expanding. The Chinese are developing a delivery system that soon will give them intercontinental capabilities, too. Economic and political power is more and more diffused. There are new centers of financial power in Japan, Western Europe and the Middle East.

Riyadh, Lagos and Brasilia—only exotic names a decade ago—now are known throughout the world as political power centers. We can no longer reckon national security in strictly military terms. Global problems—ecological, social and economic—crowd us. They have become so critical that B–1 bombers and cruise missiles may have little relevance to real national security within a very few years.

In Washington, we are constantly reminded of the world's population problems by a clock that has been installed at one of the city's busiest intersections. If you hit the traffic light wrong, you can watch the clock tick off the world birth count at the rate of 172 new lives a minute. The birth hand on that clock moves almost three times as fast as the second hand on your wrist watch. It's a sobering thing to see and to think about.

It took about three million years to reach a world population of one billion. Then, in only 100 years, it doubled. After that we really picked up speed. In another 30 years, the population reached three billion and 15 years later it hit four billion. By the year 2000, the world population is expected to top 6.5 billion. Estimates place close to five billion of those people as inhabitants of one of the 114 "developing" countries, not including the Peoples Republic of China.

How to absorb and feed these additional billions remains an open question. The earth's finite resources are already severely strained.

Lester Brown, President of Worldwatch Institute which trains a concerned eye on the condition of Planet Earth, reports that, "The health of the earth's principal biological systems—fisheries, forests, grasslands, and croplands—is threatened by excessive human claims."

For example, between 1930 and 1970, the global fish catch rose from 21 to 70 million metric tons a year. But, since 1970 the catch has not grown at all. In fact, some years it has actually fallen below the 1970 level.

In the area of energy, we are all aware of the finite resources that sustain our highly industrialized society. But how many know of the firewood crisis that devils the "developing" world? A generation ago villagers in the Himalayan foothills of Nepal gathered all the firewood they needed in an hour or two. Now the process takes an entire day.

As our world and its problems change, so does our role in the world. The increasing diffusion of military, economic and political power, which I mentioned earlier, does not affect our absolute strength, which continues to grow militarily and economically. But, it does affect our relative strength. To put it bluntly, we are more dependent on the rest of the world than we have ever been before, and our dependence is increasing.

Fred Bergsten, Assistant Secretary of the Treasury for International Affairs, reports that today, "Imports provide more than one-quarter of our consumption of 12 of the 15 key industrial raw materials."

Oil, of course, is the most obvious example of our dependence. In 1971, we imported 25 percent of our oil, in 1976 that figure had risen to 41 percent, and last year it was up to 47 percent. The price tag for imported oil last year was a whopping $47 billion, which says all that need be said about our balance of payments deficit.

Less well known is the fact that we import 100 percent of the natural rubber we use; 98 percent of the manganese; 96 percent of the cobalt; 95 percent of the titanium; 94 percent of the bauxite; 92 percent of the chromium, and 90 percent of the tin, to name only the top seven.

Not only is our economy heavily dependent on foreign imports, it is also heavily export-oriented. Today, one in eight manufacturing jobs in the United States produces for export. Forty percent of our construction machinery is produced for export and exports account for 25 percent of the cash receipts of our agricultural sector.

I dwell on these facts and figures because they argue effectively the need for a new vision in U.S. foreign policy—a vision that is in tune with the complexities of a changing world. We will, of course, continue to be concerned with traditional security questions, particularly vis-a-vis the Soviet Union. We must deal with these issues both by negotiation and by maintaining a credible military posture.

But, more and more, we must center our concern on the global problems that threaten our existence. And, increasingly, we must focus on the Third World, where the bulk of the world's population will live by the year 2000, and which is rich in the natural resources so vital to our survival.

From what President Carter said before his election and from what members of his Administration have said since then, I believe the Executive Branch is aware of and concerned about these issues. But I am troubled that no Administration spokesman so far has come forth with a strategic approach to the problems of the Third World or, for that matter, to our allies' problems. And I am concerned because no one is telling the American people plain truths about what new directions we should be taking in foreign policy and about why they are a matter of national survival.

A hundred speeches about world interdependence by me would be meaningless beside one straight-from-the-shoulder, no-punches-pulled talk by the President of the United States. I hate to describe limits to the power of a U.S. Senator, but, I have to agree with Teddy Roosevelt: "The White House is a bully pulpit." Indeed, there is none bullier.

Just before Christmas an unexpected visit from an old friend started me thinking about why a foreign policy strategy is necessary even if you only intend to pursue a pragmatic policy of reacting to targets-of-opportunity. My friend, a distinguished European academician, came here in behalf of a group of Europeans concerned to know what the Carter Administration foreign policy was. He promised to send me his report and I promised to send him this speech. But the important point is that, offhand, neither of us could say with any certainty what U.S. foreign policy was or where it was heading.

That's a dangerous situation for us to be in, and it's dangerous for our allies and for our adversaries. Uncertainty can be very tempting to international adventurers.

The Carter Administration, of course, has not been inactive in foreign affairs this first year. Major departures in our arms transfer policy, nuclear proliferation and human rights have been discussed. But, in practice, most of President Carter's first year has gone to developing initiatives on SALT, the

Middle East, Panama and Africa which were legacies from past administrations.

After a shaky start, which should be laid more to inexperience than to ineptitude, the Carter Administration now has U.S.-Soviet relations back on the track. A great deal of attention is being devoted to a range of negotiations with the USSR on SALT, the Indian Ocean, MBFR and the Comprehensive Test Ban Treaty.

As a Senate advisor to the SALT talks, I have closely followed this issue, which is the linchpin in U.S.-Soviet relations. I am generally impressed with the care that is being taken in these negotiations. Certain key issues remain unresolved still. But there has been substantial progress, and I think we will have a good agreement before too long.

I don't know how much credit President Carter deserves for the positive developments in the Middle East. Frankly, I doubt we'll ever know whether his joint declaration with the Soviets frightened Sadat and Begin into direct talks, or whether he urged them in that direction from behind the scenes. Both scenarios are available in Washington. But, no matter how they came about, the Sadat-Begin talks are cause for rejoicing.

As an Israeli friend says, "Now, perhaps, perhaps, for the first time in our lives we can dream of peace coming to the Middle East."

President Carter has also brought to fruition the policy initiated by President Johnson, and continued by President Nixon and President Ford, of seeking a new relationship with Panama. Two treaties on the Panama Canal were signed on September 7, 1977, and now await Senate ratification. It won't come easily, however, unless the President finds some way of communicating to the American people just how much our national security requirements have changed since the Canal was built and precisely how these treaties fit into the national security picture in the year 1978 and thereafter.

And that brings me back to my central point: we urgently need a coherent approach to global issues within which we can weigh the consequences of such acts as ratifying, or failing to ratify, the Panama Canal Treaties.

We need a coherent explanation from President Carter of how he views America's role in a complex interdependent world and of where he would like to see this country at the end of his term in office.

Not long ago Time magazine reported that President Carter does have some longrange goals, but that he has confided them only to Vice President Mondale, Secretary of State Vance and National Security Advisor Brzezinski. The time has come, it seems to me, for the President to confide in the American people as well. Perhaps he will do so tonight in his State of the Union Message. I hope so.

I certainly don't pretend to have a blueprint for foreign policy myself. And I agree with those Administration officials who warn of the dangers of an inflexible doctrine. But, I do think some strategic guidelines for the conduct of American foreign policy are overdue.

We urgently need to define what our vital interests in the world arena are. Then, we must condition ourselves not to get involved in every issue, large and small, that arises on the face of the globe.

I know a fellow who advocates what he calls a foreign policy of "eclectic neglect." By his definition, you could ignore most of the world's problems. I don't go quite that far, but I do think we have to learn to say "No." We must define the limits of the possible and then we must not stretch ourselves beyond them.

Obviously, the Soviet Union will occupy a good deal of our attention in the coming years and the Peoples Republic of China undoubtedly will be increasingly important in the geo-political picture. At the same time, we must reassure our Western European allies and Japan that we consider our relations with them to be the fixed star of our foreign policy.

We must also focus more attention on our important relationships with Third World nations, for the truly crucial problems of the future—energy, population, hunger, the destruction of the environment—all intimately involve the Third World. And they can only be solved by cooperation not by flat.

I know it's not necessary to remind this audience that we can only be as strong abroad as we are at home. If our cities are decaying; if unemployment and inflation are sapping our strength and breaking our spirit; if our lakes and rivers are polluted; if the confidence of our business community is uncertain, then we cannot expect to provide leadership to a troubled world.

In great periods of American history, foreign policy has been bipartisan. Both parties have shared the takeoffs as well as the landings. The whole Senate has been broadly knowledgeable of the course and the goal of our foreign policy. It has interpreted them to the American people in multiple, mysterious ways in which we communicate such things.

Out of such a bipartisan effort may grow a conviction that positions are taken in the national interest and not merely in the President's interest, or the Administration's interest, or in the interest of a particular political party.

From time to time, there are signs on both sides that this tradition is being neglected or forgotten today. I call for its revival, not out of sentiment, but out of a sense of urgency dictated by the decisions required of us and the need for consensus to support solutions yet to be found.

I pledge my best effort to rekindle the sparks of bipartisan foreign policy the enabled America to overcome great challenges in the past. I hope others will join me in the effort which is long overdue. But, no matter how ready the rest of us are for a bipartisan foreign policy, we cannot go it alone. The President must provide the leadership. He must move us from drift to decision.

"TOWARD A NEO-CONSUMERISM"

Mr. DOMENICI. Mr. President, our colleague, Senator McCLURE, is author of an article which appeared in the February issue of Trial, the national legal magazine.

This articulation of the sentiments of the majority of Americans against the growing bureaucracy also defines a moderate approach in giving the American consumer the right to participate in Federal agency proceedings and to allow the individual access to remedies without encroachments by the bureaucracy on his personal freedoms.

I, therefore, request unanimous consent that the piece entitled "Toward a Neo-Consumerism" be printed in its entirety in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOWARD A NEO-CONSUMERISM

(By U.S. Senator JAMES A. McCLURE)

The epitaph of the twentieth century America may well be: "Its sparks of genius gutted the forest."

Over and over we have seen ideas, creative and imaginative in their conception, evolve into responses which are counterproductive to the problems which they supposedly address.

The particular conflagration which I propose to discuss in this article is the old-line consumerism, its antecedents, development, demise, and alternatives.

The old-line movement had its inception with the birth of Ralph Nader's Washington infrastructure in the 1960s. Following in the wake of the publication of *Unsafe at Any Speed*, the national highway safety program was created in 1966. Shortly thereafter, the Occupational Safety and Health Administration had its birth in 1970, and the Consumer Product Safety Commission came into being in 1972.

Most of these statutes are substantially similar in conception and format:

"Section 1. Congress finds that Problem X is a serious problem which impinges on interstate commerce.

"Section 2. Congress has no idea what can be done about the problem.

"Section 3. Congress therefore establishes a bureaucracy to solve it."

Unfortunately, much of Congress has yet to learn that, in the words of columnist Nicholas von Hoffman, "The creation of boards, councils, committees and commissions is not the equivalent of substantial accomplishment."

It has rapidly become apparent, in fact, that the bureaus which have been created are either unable to solve the problems which we have delegated or, even worse, can envision solutions only in terms of actions which seriously impact on individual liberty.

The Occupational Safety and Health Administration is an example. Created in 1970 to reduce the number of injuries in the American workplace, that agency has spent a half-billion dollars in its first five years of operation. However, between 1972 and 1974, the National Safety Council has found that the injury and illness rate per 100 full-time workers has increased from 10.17 to 10.20.

Although the Bureau of Labor Statistics has found a decline in non-serious injuries during 1975, it has been forced to conclude that the work days lost to injuries and illnesses per 100 workers rose to 54.4 in 1975, compared with 53.1 in 1974. The 1975 figures, therefore, represent a dramatic increase in serious accidents, at the expense of less serious ones.

YESTERDAY'S PROPOSALS

Faced with the possibility of extinction, OSHA belatedly decided to restructure its efforts around the detection of carcinogenic substances in the workplace. But once again, it appears that yesterday's proposals will be applied to today's problems. The OSHA carcinogenesis proposals thus far posited look suspiciously like the inflexible, outdated Delaney amendment.

OSHA, however, is not the only bureaucracy which has failed to live up to congressional expectations. Agencies regulating trucks and buses, airline routes, highway safety, and oil, and gas, to name but a few, have all been accused of perverting their functions of consumer protection in order to limit the availability of services and to drive up prices.

The Federal Trade Commission (FTC), in fact, has estimated that regulatory overkill results in a cost of $80 billion each year to the American consumer. The General Accounting Office put that figure at $60 billion yearly. And the President's Council of Economic Advisors, computing both direct and indirect costs to the consumer, set the figure at $130 billion a year. For the average American family, this translates into about $2000 per year for the full cost of regulation.

For the Interstate Commerce Commission (ICC) alone, estimates of the cost of regulation to the American consumer range

from about $4 billion to $9 billion annually. This means, according to one study, that 460,000,000 needlessly expended gallons of fuel belch 150,000 tons of pollutants into the air, thanks to the people at the Interstate Commerce Commission.

This is, in part, the result of regulations requiring trucks to roll along with trailers empty, even though shippers at both ends of the line would gladly provide cargo, if allowed by law. Unfortunately, having hauled freight one way, truckers are forbidden from carrying cargo on the return trip. It is, of course, the consumer who pays for this regulation.

Or take the Civil Aeronautics Board (CAB). A state regulated airline in Texas can fly passengers between Dallas and Houston for $15 per trip, and can still make a comfortable profit. An interstate line is required, as a result of regulation by the CAB, to charge $31 for the same trip. Again, it is the air travelling consumer who is forced to foot the additional $16 bill.

In the area of consumer product safety, mandatory safety standards developed by the Consumer Product Safety Commission threaten to nearly double the price of power lawnmowers, according to a Stanford Research Institute study.

In the case of automobiles, federally-mandated costs added $320 to the base price of every 1974 passenger automobile—for a grand total of $3 billion. This does not include the impact of a tire quality grading system being developed by the National Highway Safety Administration which, according to a trade association, could cost consumers as much as $150 million and still be too confusing to be of any assistance to tire buyers.

The list of federal government costs to the consumer could be drawn out almost indefinitely.

The solution? Old-line consumerists have normally responded with two types of proposals.

Their first panacea is the creation of a new agency to watch over the old agencies. This remedy must be regarded as a little extraordinary.

Currently, the federal government has 33 agencies and approximately 400 bureaus and subagencies operating more than 1000 "consumer-oriented" programs. But Congress has already created a dozen special regulatory agencies to oversee the others.

It was Richard Simpson, former chairman of the CPSC, who stated, "If we accept the premise that existing federal agencies are not responsive to the interests of consumers, by what logical reason could we create another federal agency and expect thereby to correct the deficiency?"

Ralph Nader's associates told us that since federal agencies can no longer handle the problem adequately, what we need is a super agency—a Consumer Protection Agency (CPA)—outside of the normal government structure, free of inconveniences of the normal checks-and-balances built into our system. They see the CPA as a separate entity unto itself, unhampered by higher authority, and responsible only to itself.

THE FOURTH ARM

It would be like a fourth arm of the government. There would be the Executive, the Legislature, the Judiciary, and the Consumer Protection Agency.

When that legislation was abandoned in Congress, they turned to the state court system and something called the Consumer Controversies Resolution Act, legislation to give the federal government omnibus jurisdiction over state small claims courts.

As serious as all this may sound, however, I am perhaps more alarmed by the second old-line consumer group response to the failure of old-line consumerism—attempts to increase the penalties for violation of agency prohibitions. This is a particularly disconcerting response in view of the recent congressional tendency to expand the ability of agencies to change the rules.

There was once a time when a businessman was required to violate the law before being subject to criminal penalties, and it was not so long ago that that violation had to be intentional. While ignorance of the law was never an excuse, ignorance of a fact which would make an otherwise lawful act unlawful has been a defense in most cases.

Legislation currently before the Senate would make unlawful otherwise lawful business transactions in which the actor was reckless with respect to the circumstances. The ambit of criminality under securities and antitrust laws is already a slippery slope, which the statutory removal of *scienter* would turn into a cliff.

The $1000 to $5000 per day penalties for rule violations, which are envisioned by recent legislation, also represent a considerable expansion of the ambit of criminality. Once an agency, be it the Federal Reserve Board or the Federal Trade Commission, is capable of imposing penalties for violation of its rules which are beyond the means of the violator, bureaucratic prescriptions have effectively been turned into criminal law—a power which has previously been reserved to Congress and the courts under the constitutional scheme.

If anything, we need to rethink the extent to which the bureaucracy's low opinion of the American people has resulted in a trade-off of liberty for security.

It is clear that the only real solution to the problem of increased prices and diminished services is less regulation, rather than more of it.

CONGRESSIONAL COALITION

I am not alone in this belief. In fact, the growing recognition that government is, in some instances, more the problem than the solution has led to informal coalitions of senators and representatives which transcend ideological labels—groups of legislators brought together around the limited notion that, in some instances, old-line solutions have become counterproductive.

The premier example of this phenomenon, which, for lack of a better title, I will call "neo-consumerism", is the "Sunset Bill" currently pending before the Senate Governmental Affairs Committee. Sponsored by some of the most liberal and some of the most conservative senators this legislation would phase out bureaucracies which were no longer able to justify their continuing existence.

Congress has also taken a positive step in requiring a number of regulatory agencies to recodify and simplify their rules along lines originally proposed by Senator Paul Fannin. Much more needs to be done, particularly in terms of introducing competition into the transportation industry through an orderly and non-cannibalizing process. This is a fight in which liberals and conservatives are also joining together.

I see many opportunities for neo-consumerists to work together in the future. Topics such as zero-based budgeting, the abuse of public funds for government public relations, and the award of legal fees to successful litigants against the federal government are all topics on which liberals and conservatives have worked hand-in-hand. What they all hold in common is the notion that the federal government is increasingly becoming the number one consumer problem.

Some of these legislative proposals deal with the necessity to relieve the consumer of the sheer volume of government regulation.

Others deal with the need to structure remedies which will allow the American consumer to resist encroachments by the bureaucracy on his personal freedom. High on the list of priorities in this regard is legislation recently approved by the Senate but deleted in conference which would grant a successful litigant against the federal government his reasonable legal fees. Such legislation would, for the first time, equalize the average American and the government bureaucracy in the eyes of the law.

Just as important is the prevention of further legislative erosion which would thrust the bureaucracy even more extensively into the marketplace.

The House defeat of a cargo preference bill which would have cost the American consumer $500,000,000 was a major victory; but at the same time we have not yet disposed of legislation which would move the federal government into the center of automobile insurance regulation.

CONCLUSION

As all of this would seem to indicate, I think we are beginning to realize that the stock approaches to consumer problems taken by old-line groups—the creation of new bureaucracies and the progressive shrinkage of the ambit of non-criminal conduct—have not worked.

Moreover, they have contributed significantly to the creation of a paternalistic state which deprives its citizens of responsibility for their own well-being. Like Hans Castorp in Thomas Mann's *Magic Mountain*, we will soon find that the cure becomes a prison and that we are no longer able to fend for ourselves outside its sheltering sanctuary.

Unfortunately, yesterday's muckrakers have become today's prison guards. While they are willing to make housekeeping changes, they are generally unwilling to dismantle their institutions in fundamental ways which would inure to the benefit of the general public.

Over the entrance to a New Jersey courthouse is carved the inscription, "That which stands best, stands still." There is probably no area of the law which, in recent years, has clung more tenaciously to that principle than old-line consumerism. It is time to embrace a new consumerism representing both innovation and reform. Neo-consumerism represents just such an alternative.

TRIBUTE TO SENATOR HUBERT H. HUMPHREY

Mr. HASKELL. Mr. President, the Senate has lost an irreplaceable colleague and the Nation has lost a great public servant with the passing of Hubert Horatio Humphrey. He has already received many eulogies. Additional tribute is made at the risk of repeating what has been said.

Hubert Humphrey was a remarkable man. His life was an inspirational example.

As mayor of Minneapolis, Senator from Minnesota, and Vice President of the United States he gave his total personal energy to the people he served. Hubert's constituency was not limited to parochial interests. His concerns were those of all the people of this country and the world.

His qualities of optimism, compassion, and hope, as well as his belief in equality and opportunity for all were not confined to any single area of expertise, sector of the Nation, or group of voters. The initiative he took in civil rights, health care, arms control, and full employment, exemplifies his disdain for political expediency and his overriding dedication to the public good.

His faith in the American political system was steadfast. His accomplishments were notable and lengthy. As early as 1948, Hubert took the lead in the fight for civil rights and equal opportunity for all Americans. He played a major role in the enactment of medicare, the creation of HUD, the food for peace and jobs corps programs and passage of the 1964 Civil Rights Act. He was an avid supporter of child nutrition, full employment and national health insurance.

He was not content with trying to solve the problems which confronted only Americans. He was a major international figure as well.

He stressed the need for human rights abroad and was instrumental in creating the Peace Corps. He also worked diligently in the Congress for passage of the Nuclear Test Ban Treaty.

Hubert has earned a place in history because of his notable public career. However, it is exceptional that he should also attain such an honor because of his extraordinary personal qualities.

I shall not forget one of my last meetings with Hubert Humphrey. A sudden hospitalization had caused him to cancel a trip to Colorado to support my upcoming campaign.

When he arrived back on the Senate floor he greeted me with profuse apologies for having to break his promise to appear on my behalf. The average person would have been soliciting sympathy and sharing hospital stories. Not Hubert. He was worrying about having disappointed a friend. Hubert Humphrey never disappointed me.

In the face of personal crisis and political defeat he did not become vindictive or vengeful. Characteristically, he remained benevolent, persistent, loyal, and optimistic. Perhaps his greatest attribute was his rare gift of empathy. Coming from a midwestern, rural background, he was able to communicate with real warmth with any person regardless of race, creed, occupation, or sex. It is this empathy which gained him the respect of every American.

On this occasion, I take pride in the fact that I had the opportunity to serve with and learn from such a distinguished Senator and citizen. He will be remembered as a beacon of the American character—fidelity, compassion, enthusiasm, and hope.

DISCRIMINATION IN PANAMA

Mr. BAKER. Mr. President, last fall I wrote to Mr. Benjamin L. Hooks, the executive director of the NAACP, to express my concern about reports that had appeared in the media describing extensive government discrimination against the black population of Panama.

Mr. Hooks responded with a most thoughtful letter reporting, ironically, not institutionalized discrimination by the Panamanian Government but discrimination by the Canal Zone Company and Canal Zone Government. Moreover, he expressed the strong support of the NAACP for ratification of the treaties.

I believe the letter well worth the consideration of my colleagues and ask, Mr. President, that it be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE,
New York, N.Y., November 10, 1977.

Hon. HOWARD H. BAKER, Jr.,
Office of the Minority Leader,
Senate Office Building,
Washington, D.C.

DEAR HOWARD: I have been out of the office hence the delay in responding to your letter of September 8 regarding the extent of discrimination against Blacks in Panama.

The NAACP has an active branch in Panama in the Canal Zone which was organized to address many of the concerns of the local population regarding the extent of discrimination in Panama. Our branch has reported that the Panama Canal Company and Canal Zone government have maintained unjust discriminatory practices in employment, housing and schools against Blacks and Panamanian citizens which has resulted in inferior living conditions and schools for Panamanians.

Based on our local branch's investigation, the NAACP adopted a resolution at its 66th Annual National Convention in 1975 strongly condemning the discrimination in employment and segregation in schools and housing in the Canal Zone and supporting the merging of the dual housing and educational systems. Since that time, our branch has continued to wage a campaign against the discriminatory practices.

The NAACP has taken a position, which I am personally and officially in favor of, that the Panama treaties should be ratified and I hope you can see your way clear to support that position.

In the mainstream of Black thought, it is felt that ratification of the treaties would be the embodiment of international cooperation and a positive and important instrument of peace and goodwill inasmuch as colonialism has long been a threat to international peace, freedom and the liberty of people of color.

Before I attended the White House Briefing on Panama, it was my personal opinion that the treaties should be ratified. Since that briefing, based on what we heard from General Brown and Secretary Brown, we believe that there is no real conflict in the ratification of the treaties and our military position.

I am reminded of a very serious meeting some years ago involving coal miners and the President was going to call out the National Guard. John L. Lewis is reported to have said, "You can't dig very much coal with bayonets."

Again, I am sorry for the delay in getting this letter to you. I really thought that I had already sent it and just discovered that I had not.

Sincerely,

BENJAMIN L. HOOKS,
Executive Director.

A TRIBUTE TO SENATOR HUMPHREY

Mr. ANDERSON. Mr. President, recently a sermon by the Reverend Will Dublin, Jr., pastor of Reliance United Methodist Church, in Reliance, Va., was brought to my attention. The sermon speaks of the principles to which Senator Humphrey was dedicated, and of his deep compassion for other people. It is in this sense that his spirit will remain with us, guiding our thoughts and actions as public servants. Mr. President, I ask unanimous consent that this sermon be printed in the RECORD.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

TRIBUTE TO HUBERT HORATIO HUMPHREY

The Power of the Good News: To Forgive Sinners.—Mark 2.1–12.

The Great, Happy Warrior, Hubert Horatio Humphrey is dead!

He now lies in the rotunda at the Capitol Building in our nation's capitol and at this very moment there is a memorial service being conducted with President Jimmy Carter delivering the eulogy.

Senator Humphrey, a former Vice-President of the United States, died Friday night of cancer following a courageous battle during which he hoped to return shortly to the second session of the 95th Congress. He is the second senator to die within the past week. Lee Metcalf of Montana died a couple of days ago.

Many honors have been bestowed upon the senator from Minnesota—my home state. It was 30 years ago that he came to Washington, D.C. as senator following a short stint as mayor of Minneapolis.

Humphrey was known for his long list of legislation—civil rights, education, nuclear test ban treaty, etc. However, those of you who watched the 1948 Democratic Convention might remember the time he took a bold and courageous action in his civil rights speech. He stated that we must move out of states rights and into the bright sunshine of human rights. Thirty years ago there were those in Washington talking about human rights. It is not something new with the present administration. However, it is evident that it may not have been practiced to its fullest within recent years.

Hubert Horatio Humphrey's disposition was such that it was hard for him to remain angry. He proved that we have to look for the good in people to make our society work. He refused to be discouraged. Whatever needed to be done could be with our resources, if we wanted to accomplish them bad enough. The problem was that sometimes there were those who felt it might take too much energy, too much trouble, too much sweat of the brow.

Friday night, when Vice-President Walter Mondale, a close colleague, announced the death of the great statesman from Minnesota, the current Vice-President stated, "Hubert showed us how to die with dignity. He had courage, spirit, and knew the meaning of life. He was larger than we might otherwise be."

In 1968 when Humphrey ran with Senator Edmund Muskie on the Democratic ticket for President and Vice-President of the United States, it would have been easy for the Minnesotan to become bitter in losing, but he didn't. Humphrey and Muskie developed a close relationship over the years—conversing once or twice weekly. Muskie reflected, "We usually talked twice a week but recently it had been only once weekly. This past week his voice was cracking but he said he felt better. No doubt his body was racked with pain." Muskie said, "If anyone could defeat death and hang on a little while longer it would be Hubert Humphrey. He just would not let on how he really felt. He knew what the future lay in store for him—the life Eternal beyond this life."

HHH had compassion, faith, and optimism.

Tributes have poured in all over the world.

Usually I do not give that much emphasis to our statesmen in Washington. However, HHH was of a different mold. His party affiliation was not that important. What mattered was that he believed in the human dignity of man.

As his coffin arrived at Andrews AFB late yesterday morning amidst the cold, bitter, wintery weather, his wife of 41 years, their four children, and ten grandchildren arrived on Air Force One. HHH was given a 19-gun salute after the armed forces honor guard had taken his coffin off the plane. The armed

forces band played the stirring hymn, which we sang earlier this morning, "My Faith Looks Up To Thee."

After lying in state in the capitol rotunda, HHH's body will be returned to his home state to lie in state followed by church and burial services there. HHH is the 25th individual to lie in the nation's rotunda, the first being Henry Clay.

And so HHH follows many great statesmen who have previously lain in state. There are many predecessors who have tried to make our nation a great one—one that is of, by, and for the people—enjoying the freedoms which we do.

Let us now turn the pages of time from 1978 back to the time of Jesus as we look at the words of St. Mark where he records his account of the paralytic man that was healed and the emphasis being that a penitent man is forgiven of his sins.

There was more in mind that Jesus had for the paralytic man than what he and his friends realized. In our reflections upon the Gospel of St. Mark we have dealt with the prophecy and power of the Holy Spirit and the matter of healing the sick in mind, body, and spirit. There are many questions that come to mind on why Jesus chooses to heal some and not others. This is one of the great mysteries of life for which we do not have proper answers.

I recall with fondness a young 39-year-old wife and mother of a teen-age son in a former parish. She lived her Christianity daily. It was not just a Sunday thing. She, too, contracted cancer. One of the greatest moments in her life was working closely with her husband in camping activities with the young people. One of the last times they could be together, she took her husband's hand and together they took time to walk down by a stream and meditate upon the richness of God's wonderful blessings. It was a tremendous loss to the parish when she died—also to her community, and especially her family. The church was packed for her funeral. She literally touched the lives of so many. She had made her peace with God by the great river. Jesus, too, gives us new life which comes from His flowing water. This wonderful Christian, along with many of the great saints is now home with her Heavenly Father. We must include HHH in this category of sainthood, and modern discipleship.

Through our sufferings we usually come closer to God and discover the true meaning and cost of discipleship.

Jesus had returned to Capernaum—the area where our Master preached to the fishermen from whom he collected his first followers. If one would go there today to visit, there would be primarily ruins and beautiful purple flower gardens. Capernaum was the home of Jesus where he began his mission and also the site of where we started our boat ride on the Sea of Galilee last spring when visiting the Holy Land. Our ride ended at Tiberius, also on the Sea of Galilee, 13 miles from start to finish.

The home where Jesus was located no doubt was Simon Peter's. He would preach at almost any opportunity available. There was a large crowd around Simon Peter's front door, so the paralytic had to be let down through the thatched roof by four of his friends. This type of incident reminds me of John Wesley in his field preaching where at times there were as many as 5,000 in attendance—many falling prostrate on the ground because of coming under conviction of the power of the Holy Spirit.

There could have been several reasons for the man's paralysis—one being mental (psychological). There was a special dialogue that took place. It was evident that there was a strong faith on the part of those who brought the man to be healed plus the individual himself. All of a sudden Jesus proclaimed, "My Son, your sins are forgiven." What an assurance! The paralysis may have been caused by guilt and the words of our Master tore the man loose from his paralysis. The twisted mind in the twisted body was healed and the man returned home to take up his normal duties.

The problem was not with the cure of one's paralysis; rather, the forgiveness of sins—"who can forgive your sins but God alone?"

So many times we walk around with guilt upon our shoulders. We are begging to be forgiven. We want to be forgiven. Jesus has forgiven us, but we have not bothered to forgive each other.

The scribes were objecting to a man claiming God's power. Was this act of forgiveness genuinely God's work, or not? The scribes wondered if there was fraud. Their hostility was evident upon their faces.

It was obvious that the experience of the five supported a positive answer—the gift of forgiveness and health was a gift from God. Their amazement led them to glorify God.

The important thing that we can be sure of for Mark is the fact that God had forgiven this man as a way of declaring that God would be glad to and had opened His Kingdom to such a sinner.

An interesting side note is not that the paralyzed man or his parents had sinned. Did Jesus see that the paralysis was the psychological result of a sense of guilt?

Many individuals inside and outside of our mental institutions have psychological problems that have cause certain physical problems. It may take months or years to unlock the psychological barrier. Then, too, there are times when these barriers are never unlocked. HHH was vitally concerned with the areas of mental health.

Last Sunday we celebrated the Lord's Supper as we renewed our covenant with God and the vows of church membership. Many times confession is good for the soul. Confession, too, can unlock some of these psychological barriers. When Jesus comes to us in Holy Communion, laying His merciful hands upon us and assures us from the Gates of Eternity that our sins are forgiven, there is no moment so great for the sin-burdened soul. Then we may rest in peace.

This is where we find the paralytic. This is where we find HHH. Both are at rest in the Lord.

What about those who seek revenge because of something someone had done to them or a close associate? HHH's life style was again one of compassion and love.

We may not have agreed with all of HHH's political decisions. However, there is no question as to his integrity as a person. His work on earth was finished and God has called him home. Who will take his place? Like Jesus, no one can fill his shoes. We might try, but there is no way!

Should HHH have had the opportunity to return for the second session of the 95th Congress, certainly one of his concerns would have been the continual dignity of man and the rights guaranteed by the Constitution of the USA.

Now, a noble statesman in his own right, HHH rests from his labors, his pain, and is at peace with God. He was a humble servant. Jesus, our Lord and Saviour, who has redeemed us by the power of His blood, has followed suit. The spirit of HHH, plus his compassion, his faith, his courage, his nobleness, his conviction of human rights, will rest with us always. May we take a page from the life of HHH and apply it to our own.

The beautiful thing about the Good News which Jesus Christ proclaims to all is that our sins can and have been forgiven and what is needed upon the part of all of us is to make this Good News a part of us and then share it with others. Whether a public servant in Washington, a pipe-fitter in Alaska, a teacher in the slums of New York, a carpenter in California, a housewife in the midwest, a nurse in a field of mission service, a retired plant worker in Virginia, a young person or child—our sins have been forgiven. This is the Good News and may it remain with us always.

Let us now pause for a few moments of silence in memory of HHH and others as we listen to the beautiful chimes of our church playing the hymn, "Faith of our Fathers." Amen!

WESTERN GOVERNORS URGE SOLAR ENERGY LEGISLATION

Mr. STEVENS. Mr. President, because of the national need to conserve oil and gas and because of the contribution solar energy can make toward meeting the energy needs of homes and businesses while cutting oil and gas consumption, the Western Governors' Conference, meeting in Anchorage in September, adopted a resolution urging the enactment of legislation providing tax credits and loans for solar energy.

This type of assistance is provided by the legislation which is now in conference. But final action has been delayed by disagreement on other aspects of the National Energy Plan. I urge that the measures regarding weatherization, solar power and other renewable energy sources be enacted quickly, so that homeowners and businesses can get on with installing this equipment, without regard to the other aspects of the package.

Mr. President, I ask unanimous consent that the resolution of the Western Governor's Conference be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

WESTERN GOVERNORS' CONFERENCE,
San Francisco, Calif., Sept. 2, 1977.

SOLAR ENERGY DEVELOPMENT

In order to accelerate the use of solar energy and reduce the growing demand for conventional fuels, we Western Governors urge Congress and the President to enact legislation (1) that allows federal income tax credits of an appropriate amount to building owners who install either passive or active solar energy devices and (2) that establishes a program for low-interest long-term loans covering initial costs of solar energy applications for buildings. Such federal tax incentives should be made retroactively effective to coincide with state laws already passed. We also intend to promote similar programs to encourage solar energy use within our states.

Approved by the Western Governors' Conference, Anchorage, Alaska.

THE CARTER ADMINISTRATION POSITION ON WATERWAY USER CHARGES

Mr. DOMENICI. Mr. President, I am told by some of my colleagues that they still do not know exactly what the administration's position is regarding waterway user charges. I believe that position is clear, forthright, and direct: They will veto a bill on Locks and Dam 26 if it contains a user charge as minimal as the House provision.

To place the administration's position in context, I ask unanimous consent that a letter from Transportation Secretary Brock Adams, together with statements by the President in both his state of the Union message and in his fiscal year 1979 budget and a recent White House memo be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF TRANSPORTATION,
Washington, D.C., October 18, 1977.

DEAR SENATOR: I reported to you earlier of the President's firm intention to disapprove any bill authorizing construction of a new locks and dam facility at site 26 in Alton, Illinois, if the bill does not contain a provision establishing waterway user charges along the inland waterway system. Recent events require me to clarify the Administration's position on this issue.

As you know, we supported the waterway user charge legislation that the Senate passed. This bill would phase in a substantial user fee over a ten-year period. The House of Representatives has passed waterway user charge legislation which differs markedly from the Senate version. The House would authorize a six cent fuel tax on inland waterway commercial vessels. The House version would recover only a relatively small portion of operation and maintenance costs and new construction costs.

Because of the closed rule on the House bill and in order to insure Congressional action on this issue, on September 28, 1977, I wrote to Members of the House of Representatives indicating that the Administration would support the bill in the House, but that the Administration would work in the Senate for a higher recovery of waterway operation and construction costs. The user charge and level of recovery contained in the House bill is inadequate. In order to bring the necessary degree of equity to Federal government policy concerning the inland waterway system, legislation should be enacted which authorizes substantial waterway user charges.

Because this matter is so important to the development of a comprehensive transportation policy, I think that the Congress should be aware of the President's intention not to sign any bill authorizing a new Locks and Dam 26 which does not provide for waterway user charges that will recover a substantial portion of the operation and maintenance and new construction costs.

Sincerely,

BROCK ADAMS.

President Carter's detailed state of the Union message, submitted January 20, 1978, and beginning on S117 of the RECORD:

Users of Federal inland waterways should pay fees which will pay a substantial part of the cost of constructing, operating, and maintaining those waterways. My administration will continue to work closely with Congress toward passage of a bill that will, for the first time, establish inland waterway user fees.

FISCAL YEAR 1979 BUDGET

The administration strongly supports enactment of waterway user charge legislation that will establish charges to users of the inland waterways in amounts to recover a substantial portion of the Government's costs of building and maintaining the system. Users currently pay nothing towards those costs which now approach $500 million per year.

THE WHITE HOUSE,
Washington, January 30, 1978.

Re Status of waterway user fee legislation.

MEMORANDUM FOR THE HONORABLE BROCKMAN ADAMS, SECRETARY OF TRANSPORTATION

The President reviewed your memorandum dated January 23, 1978 on the above subject and stated: "Let our position be clearly known—including possibility of veto."

RICK HUTCHESON,
Staff Secretary.

COMMERCE COMMITTEE HOLDS HEARINGS ON THE BEVERAGE CONTAINER REUSE AND RECYCLING ACT

Mr. MARK O. HATFIELD. Mr. President, on January 25, 26, and 27, 1978, the Consumer Subcommittee of the Senate Commerce Committee held hearings on my Beverage Container Reuse and Recycling Act (S. 276). The hearings were alternately chaired by Senator FORD, chairman of the subcommittee, and Senator PACKWOOD, the ranking Republican and one of the cosponsors of the bill.

These hearings were the first held on this legislation by the Commerce Committee since May of 1974. Representatives of soft drink, beer, and container industries, as well as labor and environmentalist groups were heard. My belief that there is growing support for this legislation was reinforced by the proceedings, and I remain confident that Congress will enact returnable beverage container legislation.

Mr. President, I ask unanimous consent that the testimony I presented to the subcommittee be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF SENATOR MARK O. HATFIELD

Mr. Chairman, thank you for this opportunity to testify before the Consumer Subcommittee of the Senate Commerce Committee regarding the Beverage Container Reuse and Recycling Act (S. 276). You and I have sponsored this bill in the Senate along with eight of our colleagues.

This is not the first time that this kind of legislation has been considered in the Senate. Beverage container legislation was first introduced in June, 1973. Hearings were held by this committee in May of the following year. The full Senate also had an opportunity to consider this measure when it was offered as an amendment to the Solid Waste Utilization Act in June of 1976. Also in 1976, the Environmental Protection Agency promulgated regulations requiring the use of returnables on federal facilities. The National Commission on Supplies and Shortages has endorsed the deposit concept, and the Resource Conservation Committee is also reviewing the effectiveness of returnable beverage containers in reducing litter and conserving energy.

In the past there has been a great deal of rhetoric offered by opponents of this legislation concerning the lack of information about the national bill and about muddled and contradictory statistics from Oregon. Let me assure the committee that there have been several studies which have considered the impact of this concept both in the states and nationwide. For example, the Federal Energy Administration published a comprehensive study in September, 1976, that outlines the energy and employment benefits of this legislation. More recently, the General Accounting Office also found that significant benefits would result from a switch to an all-returnable system.

At the outset, let me say that this program has worked in Oregon for the past five years, and it will continue to work. The throwaway ethic foisted upon us by the beverage industry in the name of "consumer convenience" has been rejected by the citizens of Oregon. The people of Oregon have reacted to growing environmental concern in this country by returning their bottles and cans at high rates. The nickel incentive to return beverage containers has gone a long way towards reducing litter and protecting the environment of the state.

The beverage industry has produced misleading statistics and horror stories of consumer inconvenience and increased costs in Oregon, which are categorically inaccurate. In a "before and after" study conducted by the Oregon State Highway Division, beverage container litter was reduced 73 percent the first year and 83 percent the second year after enactment of the law in 1972. In addition, overall litter was reduced 39 percent by piece count and 47 percent by volume two years after the enactment of the law. The *Oregon Journal* conducted a study of ten comparably traveled sections of highway in the States of Oregon and Washington in 1974. The study shows that under Oregon's deposit law, we have 7.5 times less roadside litter in beverage containers than Washington, which has a "litter tax." These figures demonstrate returnable beverage container legislation has and will continue to have a positive effect in reducing litter in Oregon.

The Oregon experience has also proven that returnable cans and bottles are not inconvenient nor are they expensive to buy. Representatives of the beverage industry would lead you to believe that sales have been reduced and that prices have risen. I would point out that although the prices of beverages in Oregon have increased, studies show that these increases were due to rising sugar prices and inflation, and cannot be attributable to the deposit law. In a study conducted by the Oregon Department of Environmental Equality, statistics show that the price of a six-pack of beer in Oregon does not differ significantly from the price of a six-pack of beer in Washington. What the industry will not tell you is that consumption did not deviate from historical trends and that sales have actually increased.

Another tactic used to oppose this concept is the threat of job loss and economic hardship. Statistics in Oregon prove that industry is wrong on both counts. New jobs created in the soft drink, bottling, transportation and retail sales industries resulted in a net gain for the state of 365 jobs. These same jobs resulted in a net increase of $16 million in annual payrolls. If a sufficient "phase-in" period is provided, such as the three years contained in S. 276, job dislocation should be minimized.

As recently as 1960, 95 percent of our soft drinks and 50 percent of our beer were sold in returnable containers. The beverage industry subsequently altered the habits of consumers, encouraging a throwaway ethic, which is indicative of our disregard for responsible consumption habits and conservation of natural resources. Clearly, the technology is available to return to the days when we could walk sandy beaches or enjoy our parks without having to worry about the cutting edge of broken glass and mindlessly-tossed pull tabs.

Another erroneous claim often raised by opponents of returnable beverage container legislation is that the Oregon experience shows that we are trying to "ban-the-can." Granted, the first year after this bill was approved in Oregon, the market share in cans dropped. However, this was a consequence of inadequate technology being available to accommodate the pull-tab ban enacted in Oregon. In subsequent years, the can market share has increased. Except for the pull-tab ban, S. 276 treats bottles and cans even-handedly, and no diminution in the can market share is likely.

There have been other benefits in Oregon as a consequence of the deposit law. Two of the more dramatic are those relating to materials and energy conservation. A study conducted by Don Waggoner of the Oregon Environmental Council shows that the switch to returnables in Oregon resulted in a net savings of 1.4 billion BTU's annually. This is equivalent to the annual home heating needs of 50,000 Oregonians. Mr. Waggoner has also shown that it takes one-third less energy to reuse a returnable bottle than it takes to make a new one. Likewise,

it takes 20 times more energy to make a new can from virgin materials than it takes to recycle an aluminum can.

The popularity of the bill in Oregon can be seen in public opinion polls and return rates. Clearly, the latter is most important, for it is the statistic that is truly indicative of the success of the Oregon law. Thus far, the return rate for bottles has been approximately 90 percent, while cans have been returned at an 80 percent rate. This computes to an average trippage rate of 15. The economic incentive of this legislation has made willing participants of 95 percent of Oregon citizens in reuse and recycling efforts. Polls show that these behaviour patterns carry over into public attitudes, as 90 percent of the citizens of Oregon favor the concept of returnables. Interestingly, 68 percent of the people in Washington also favor the use of deposits despite that state's "litter tax," according to a survey conducted by the Seattle Post-Intelligencer.

Skeptics often point to the rural nature of Oregon as being the reason for the state's dramatic success. I dispute these claims. Oregon is a state where approximately 50 percent of the population lives in the metropolitan Portland area and 95 percent of the population lives in a highly urbanized area, within a 150 mile radius of Portland. The 5-cent incentive not to litter will be just as effective for the urban dweller in Chicago as for the rural person in North Powder, Oregon.

Studies show that the national impact of this bill will be as dramatic as actual experience has proven to be in Oregon. It is predicted that there will be 60 billion soft drink containers produced this year, and that figure is expected to rise to 80 billion by 1982. Of the 60 billion containers being produced, one in four ends up being carelessly discarded as litter. If the Oregon and the Vermont experiences hold true for the nation, it can be expected that of the 15 billion containers that wind up as litter, approximately 11 billion would have been returned for reuse or recycling. The EPA has estimated that in 1973 beer and soft drink containers accounted for 8 million tons of waste. Their contribution to the solid waste of the United States has increased 10 percent between 1962 and 1972. The same statistics conclude that if 90 percent of all containers were returned, municipal solid waste could be reduced by 5 or 6 million tons nationally.

There would be tremendous savings in valuable natural resources, as well. At a time when U.S. dependency on foreign sources of raw materials is growing, deposit legislation would result in a 35–40 percent reduction in glass consumption; a 15 percent reduction in metal production; and a reduction of 30–45 percent in the consumption of aluminum. It is important to note here that 85 percent of all the bauxite used in aluminum products is imported.

There is also the promise of reduced energy consumption. It is estimated the legislation being considered here today could save the equivalent of 81,000 barrels of oil a day.

The consumer has had to pay for the convenience of one-way beverage containers through increased litter clean-up costs and higher beverage prices. Studies have shown that the "throwaway ethic" is costing the consumer 2 cents to 4 cents more per beverage than an all-returnable system would cost. The Environmental Protection Agency recently conducted a nationwide price survey. This study showed those who buy beverages in refillable containers from 7 to 16 ounces save an average of 30 cents per six-pack. Consumers would also save 16 cents for each individual 32 ounce returnable bottle purchased. While one soft drink manufacturer promises to "add life," the continued waste represented by the one-way container is actually threatening our quality of life.

Finally, I would like to respectfully ask opponents of this legislation how they reconcile their suggestion that consumers prefer a one-way system with the fact that a study conducted by Opinion Research Corporation shows that 73 percent of the Nation's population desires a return to an all-returnable system.

The returnable beverage container law is a source of pride to Oregonians. All one has to do is drive Oregon highways or walk along its beautiful beaches to see that the law is working. It represents Oregon's continued commitment to a cleaner environment. In Oregon, we have effectively and "conveniently" established a "conservation ethic."

Mandatory deposit legislation is a positive program. It encourages people to conserve and to be conscious of their environment. Voluminous studies have illustrated the success of this bill in Oregon, and there are an equal number of studies that forecast its success nationwide. Yet, there is a large, well-financed lobby that is trying to prevent passage of this law through misrepresentation and false statements. This bill will save energy, reduce litter, and conserve raw materials.

In closing, I urge the Committee to reject the gloomy forecasts offered by opponents of this legislation. These arguments have been heard before, and have been refuted by the success of laws in Oregon and Vermont. Let us take a positive approach to our litter and solid waste problem, an approach which does not require massive federal programs or high consumer costs. I urge the Commerce Committee to promptly report the "Beverage Container Reuse and Recycling Act" to the full Senate.

FLORENCE BARR

Mr. PROXMIRE. Mr. President, the Senate, and especially the Banking Committee, is a better, more efficient and more pleasant place because of Florence Barr. Twenty-five years ago this February 1, Florence joined the staff of the Banking Committee and has served as a secretarial assistant for the minority. And she served them efficiently and loyally. However, as anyone close to the committee knows, Florence worked hard for the committee as a whole, always carrying more than her share of the work responsibility, always offering to help any staff person in need, and always with a cheerful and friendly attitude.

Florence has made a contribution to the work of the committee through five different chairmanships. During the last quarter of a century, Florence has seen them come and go. And through it all, she has kept her sense of humor. And Florence never changes. She is always prompt, enthusiastic, friendly, hard working and efficient. In short, she cares.

And to show Florence that we care, I am taking this moment to thank her for those years and to let her know how we value knowing her and have benefited from working closely with her. And, hopefully, we can enjoy and benefit from her many attributes and qualities for years to come.

LIFELINE UTILITY RATES

Mr. ANDERSON. Mr. President, Harvey Lange, the mayor of Robbinsdale, Minn., has sent me a resolution recently passed by the Robbinsdale City Council which expresses their strong support for senior citizens lifeline utility rate reform legislation. As my colleagues know, after lengthy debate, the Senate adopted a provision in the electric utility rate reform bill which requires that senior citizens be charged for a subsistence amount of energy the lowest rate charged to any customer. Senator HART and I introduced the original Senate legislation authorizing this reform and worked hard for its passage. A similar provision was included in the House version of the National Energy Act.

I am confident that the final version of the National Energy Act to be presented to the Senate will include a lifeline rate requirement.

I am sure that my colleagues, particularly the Senate members of the Energy Conference, will benefit from the knowledge that many communities all across America endorse the lifeline provisions.

Mr. President, I ask unanimous consent that the full text of the resolution recommending adoption of the lifeline utility rate program amendment be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION No. 2655

Be it resolved that:

Whereas, the cost of heating, cooking and lighting in the average home has increased 61 percent in the north central region of the nation in the last four years, while Social Security payments have risen only 30 percent; and

Whereas, the failure of Social Security payments to rise to meet the increase in utility costs has made a hardship on citizens receiving Social Security payments; and

Whereas, a Lifeline Utility Rate Program has been proposed in the United States Senate by Senator Wendell Anderson, Minnesota, and Senator Gary Hart, Colorado; and

Whereas, the Lifeline Utility Rate Program is an experimental program to be implemented for three years at the national level in which elderly citizens would receive a subsistence amount of electricity at the lowest rate possible; and

Whereas, the Lifeline Utility Rate Program has been disapproved in conference under the stipulation that it may be reintroduced, should no other utility rates subsidy program be implemented in the final Utility Rates Reform Bill.

Now, therefore, be it resolved by the City Council of the City of Robbinsdale that the Lifelife Utility Rate Program is a fair program and one which is greatly needed by the elderly in the City of Robbinsdale, as well as those elderly living anywhere in the United States who pay large amounts for electricity.

Bt it also resolved that the City Council of the City of Robbinsdale endorses the Lifeline Utility Rate Program and recommends that it, or any other program which gives financial relief to elderly paying large amounts for electricity, be adopted and implemented in the Utility Rate Reform Bill by the Senate and House of Representatives in the United States Congress.

THE NATIONAL WOMEN'S CONFERENCE: FROM $5 MILLION TO $25 BILLION IN TAXPAYERS' MONEY?

Mr. HELMS. Mr. President, several days ago the National Commission on the

Observation of International Women's Year sent to Members of Congress copies of the national plan of action adopted at the National Women's Conference last November 18 through 21 in Houston, Tex.

In a letter accompanying the plan, the presiding officer of the national commission, Ms. Bella Abzug, again reminded us that $5 million of taxpayers' money was used to finance the conference and the supplementing activity of the national commission. It admitted that a significant amount of those funds were used to cover the travel expenses of most of the delegates to the national conference. The commission's letter also pointed out that over a quarter of a million dollars of taxpayers' money was used to print and distribute the commission's educational publications. Those materials prompted complaints from many women who objected to Government publications promoting Federal funding of medically unnecessary abortions, ratification of the so-called equal rights amendment, and public acceptance of lesbianism in the name of American women.

Mr. President, because the national commission has submitted the national plan of action to Members of Congress, I believe it is important that it be considered in the context in which resolutions were brought forward and adopted at the National Women's Conference.

The resolutions proposed by the plan are not without controversy and are not without a price tag to the taxpayers. Michael Novak, in a recent column on the National Women's Conference estimated that the cost to the taxpayers' of only one of the conference's proposals could cost $25 billion.

Accordingly, Mr. President, I ask unanimous consent that the following newspaper columns and editorials regarding the National Women's Conference from the Washington Post, the Washington Star, the Tulsa Tribune, the Boston Herald-American, and the Chicago Tribune be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Nov. 18, 1977]

WOMEN'S VOICES

The National Women's Conference, which opens in Houston today, was a poor idea from the start. Such federally financed conferences, whether on women's issues or children and youth or urban policy generally give a public-relations push to ideas that don't need it and generate so much controversy over other issues that they create a public impression of even more discord than actually exists. Beyond these general liabilities, the women's conference has had special problems. Its charter, pushed through Congress by women's-rights advocates during International Women's Year (1975), directs the delegates to "identify the barriers that prevent women from participating fully and equally in all aspects of national life" and to send recommendations to the President. The trouble with that is that American men and women have so many different ideas about equality, participation and what family and cultural life should be like—as well as whether various laws defining the status of women are really barriers or shields.

The planning for Houston has not emphasized accommodation of these varying views. The conference's organizers, headed by former Rep. Bella Abzug, have advanced a "plan for action" that touches every inflammatory base. Among other things, it supports Medic aid-funded abortions, freedom in sexual matters, and federal aid for "voluntary, flexible-hour, bias-free, nonsexist, quality child care and development programs." This platform is, we believe, overloaded and doctrinaire.

In addition, the organizers have been trying to paint their opposition—including the stop-ERA forces and Mormon groups—as right-wing radicals whose views are somehow illegitimate or even dictated by men. However shrill some opposition groups may be, the drive to discredit them may wind up discrdeiting the meeting's sponsors and alienating some of their less ideological friends.

Why worry about any of this? The problem is that many political leaders and citizens may just sit back to watch a brawl. Some of the public's most harmful stereotypes of women in politics could thus be confirmed. That could hurt the Equal Rights Amendment and other important measures—such as reform of rape laws—whose progress depends on being generally perceived as reasonable and fair.

Moreover, such an outcome would misrepresent the real social and political changes that have occurred in the past several years. The more flagrant kinds of sex discrimination are gradually being dealt with by Congress, the courts and many states. The volatility of other issues, notably those bearing directly on the family, has been generally recognized. More and more women (and men) realize they can back the Equal Rights Amendment or the general concept of broader opportunity without endorsing all feminist rhetoric. And countless women, however diverse and sometimes tentative in their thinking, have become increasingly active and effective—not only on "women's issues" but across the spectrum of public concerns. We hope these quieter messages come through from Houston. It may take hard listening to hear them in the din.

[From the Washington Star, Dec. 18, 1977]

HOW SOMETHING USEFUL COULD HAVE GONE ON IN HOUSTON

(By Michael Novak)

Believe me, I have been trying to avoid writing on the government-subsidized meeting of 2,000 women in Houston. Right-to-Life groups have brought 20 times this many women to Washington for two days (and they paid their own way), but the media did not notice. Let the subject of a meeting be a cause the elite classes in this nation cherish with their hearts and the cameras will grind on and on. It's a national disgrace.

Five million dollars yet. Two thousand women in the pay of Daddy Government did not even invite a single leader of their opposition to speak; ran a disciplined meeting that put Richard Nixon's second nominating convention to shame; pulverized their internal opposition—and boasted to the world how liberal they are, how moral, and how beautiful.

Across town, five times as many women, not subsidized by the government, represented the counterculture. Almost unnoticed.

What is most curious about the elite conference in Houston is the dependence on government the new women insist upon. They say they are liberated. They say they are independent. But they want the federal government to pay for their meetings; to pay them $50 a day just to come; to pay for their child care; and to pay for abortions. Where would a modern woman be without Daddy?

Indeed, the real political meaning of the Equal Rights Amendment is not the symbolic emotional reinforcement it will give to those who desire redundant notice. The real political meaning is the interference it will warrant in state and local affairs by federal agencies.

Daddy is highly arbitrary, he has a temper, and he owns lots and lots of power and money. Nobody knows what Daddy will do with ERA. But those who love Daddy want him to show off in front of the others.

There are a number of urgent and practical questions that a women's congress could have looked into:

Thousands of American couples want babies. There are today far more "wanting" mothers and fathers than "unwanted" children. The thriving black market in babies is a scandal upon the women of this generation. In New York, the list of black parents who desire to adopt children is longer than the list of black babies up for adoption. Could not the woman's movement encourage some abortion prone who would so choose, to bear at least some babies for adoption? Many are "wanted" by loving parents.

Abortions are outrageously high priced. Conditions in some abortion mills are a scandal. Could not the women's movement see to it that the price is brought down (rather than ask Daddy to subsidize inflated prices)? Could not women protest against "windfall profits" in abortions? Must this grisly business be so shabbily conducted? It is, of course, as Time Magazine pointed out, something of a scandal for this generation of women that its liberty should be won through the death of the living. Could not the movement at least have the guts to depict honestly what happens in an abortion, and what it is like, instead of using surgical euphemisms?

The sexual aggressiveness of men constitutes a major difference between the sexes. As Bella Abzug said in Houston, she never saw a hotel full of women send out for call boys. What sort of social sexual code for men ought this society to develop now? Young women are under tremendous and unfair pressures. Our sexual mores are generating millions of personal disasters, whose effects will be felt in our children and our children's children for generations: fickleness, inconstancy, betrayal, infidelity, abandonment. Sexual confusion in our society is enormous. To those recently "liberated" from a stricter ethic, the sheer excitement of libertinism is blinding. But the jading will soon become hard to bear. Have liberated women nothing to say about sexual morals, except that lesbianism is a "sexual preference"?

Lesbians at Houston said, with pride, "we are all around you." Of course they are. In an age of sexual confusion, we may expect their numbers to increase. But the self-hatred involved in looking into the Narcissus-mirror of one's own sex will also, in time, deepen and grow. The fullness of human development lies in learning from the opposite sex. Of course, women from time immemorial have been known for being compassionate and forgiving; we did not really expect Houston to speak a word of judgment upon lesbianism. But to have said nothing at all about a public sexual morality in which women and men can find moral integrity and common understanding is a very bad omen.

Estimates for the costs of the child care desired by Houston—subsidized by Daddy—run to $25 billion a year. Are there to be no rewards from feminism, for those women who give their full time to their children, at least in the first three years of life? Is that choice, that precious service, to be treated with disdain—to be ignored? What

shocking indifference to the priceless gift so many millions of women have given to their children.

Believe me, I tried not to write about Houston.

[From the Tulsa Tribune, Nov. 19, 1977]

THE COSTLY CHARADE IN HOUSTON

(By Jenkin Lloyd Jones)

The International Women's Year conference, in progress this weekend in Houston, may be a very good thing for America.

Reform usually follows a reductio ad absurdum and this rigged and stacked powwow, purporting to represent a cross-section of all American female opinions, is not only morally fraudulent but probably illegal as well.

The case for illegality comes about because Congress last winter appropriated $5 million out of the public treasury to fund the conference. The Federal Advisory Committee Act of 1972 specifies that memberships in committees and meetings held by federally funded assemblies "must be fairly balanced in terms of the points of view represented" and not be "inappropriately influenced by the appointing authority or by special interest."

Indeed, last Dec. 10, Bella Abzug swore on a stack of something or other that "this is not a bill which requires the conference to project a particular point of view."

Rep. Shirley Chisholm promised that "any kind of lobbying activities would be negated," and Rep. Patsy Mink stated piously, "In the committee we were careful in accepting an amendment which restricted altogether any activities whatsoever that could in any manner, form or shape be called lobbying."

So what happened?

The International Women's Year Commission was already on record with a 35–0 vote in favor of pushing the Equal Rights Amendment. Thus the machinery got underway to fix the state caucuses so that those delegates would be elected who would insure a thunderous ERA vote in Houston.

The first move was to get ultraleftist former Rep. Bella Abzug appointed to head the conference, which President Jimmy Carter duly did. How well Bella Abzug represents the views of the majority of American women has never been tested at the polls, but this summer she ran fourth in the Democratic mayoralty primary in her native New York City.

Soon complaints of railroading, vote-packing and undemocratic procedures began pouring in from the state conferences. These didn't bother Bella. She stated, curtly, that such problems are "inevitable for such an ambitious enterprise" and that "all challenges have been denied."

But cats kept escaping from the bag. In New York State a complaint of bias against anti-ERA women was answered with "Get your own funds and have your own conference."

The Baltimore Sun quoted a member of the Maryland state commission as saying, "I perceive the Houston meeting as a political convention, and it has to be run like one. If we lose there we are finished."

Alas, these loaded conclaves weren't even run like political conventions. Some state convocations, ostensibly called to draw in women of all opinions, were almost secret.

In testimony last month before an ad hoc Senate committee, a Wisconsin woman said the publicity for the meeting in that state was "practically nonexistent."

A Missouri woman complained that she had to call a senator to get the time and place of the Missouri meeting.

A California witness said that not even the media had been notified. A Vermont woman described the Montpelier meeting as "the best-kept secret since Pearl Harbor," while another, in Mississippi, charged conflicting information as to time and place.

Nevertheless, opposition rose. Anti-ERA forces stormed into the Ohio, Missouri, Oklahoma and Utah meetings and took over. This triggered a unique defense. The pro-ERA forces in Arizona created a flying squad, identified with special ribbons, to hurry from workshop to workshop, wherever a vote opposing ERA or federally financed abortion was threatened.

The National Women's Political Caucus liked this tactic so much that it recommended it nationwide. Bella Abzug is on the NWPC advisory board.

The lesbians, of course, were out in force, and one shocked spectator at the Hawaiian meeting described a pornographic skit. A "spirituality" workshop in Virginia was even run by self-proclaimed witches.

Ms. Abzug has made sure that results in Houston will be satisfactory by giving herself the power to appoint 400 delegates "at large." But it should also destroy any credibility which this charade may have enjoyed with those American women who thought it really would be an honest attempt at consensus.

It isn't the principle of the thing.

It's our 5 million bucks.

[From the Boston Herald-American, Nov. 27, 1977]

IWY RESOLVES SHOULD BE SHELVED

(By Patrick J. Buchanan)

One day soon Ms. Bella Abzug and other grizzled, battle-weary veterans of the National Women's Conference will be arriving at the White House to present Jimmy Carter with their "National Plan of Action."

If Mr. Carter is thinking of a second term, he will thank them for their work, promise to study the agenda, give the girls some milk and cookies, and send them on their way. Then he will call in Hamilton Jordan and tell him to file that 25-point "Womandate" on the same shelf where the Scranton Commission Report and the Kerner Commission Report are gathering dust.

Why? Because the National Plan of Action, adopted in Houston, points Mr. Carter in precisely the opposite direction from where the national majority is headed.

Some weeks ago, Newsweek magazine ran a cover story on the "New Conservatism" that appears to be sweeping the country. Yet, what the Houston confab produced was a warmed-over hash of the radical liberalism that generally stunk up the '60s.

Item: The Houston delegates voted almost 4 to 1 for the Equal Rights Amendment. Yet, when put to the vote in New York State, ERA was crushed by a margin of 400,000 votes.

Item: The Houston Convention endorsed abortion-on-demand. Not only does this contradict the President's commitment and convictions, it runs against the trend of court and congressional opinion.

Item: The Houston conclave approved the same sort of "gay rights" provision that Dade County rejected 2 to 1 only weeks ago.

Here is how one Florida delegate, Virginia Harlan, described the "sickening . . . nauseous" scene at the Sam Houston Coliseum when the "sexual preference" plank was adopted:

"The demonstration after the vote was disgusting. Most of the pro-family delegation got up and walked out. Other delegations stood with their backs to the chair in protest. The lesbian element here was unbelievable—they were hugging and kissing each other, running through the aisles with their fists raised in a sign of militancy."

And the New York Times would have us believe those 2,000 delegates to Houston "fairly accurately reflect the general female population" in the United States.

Some of the proposals adopted, such as enforcement of the Federal Equal Credit Opportunity Act of 1974, were non-controversial. On balance, however, the National Plan of Actions reads like a political script written by Ms. Bella Abzug, ring mistress who cracked the whip at the Houston circus.

Yet we know from the returns in the New York mayoralty contest that the politics of Bella Abzug are on the wane in even the most retarded of political precincts. Though she started the race with almost 40 per cent of the vote, Bella ended out of the money in the Democratic primary, running a poor fourth. The winner: An apostate liberal named Ed Koch who captured the fancy of the Big Apple with the enthusiasm with which he discussed the societal benefits of rewiring the electric chair.

On the final day of the Houston Conference, the conservatives walked. The breaking point: the convention's demand that the American taxpayer fund yet another of these feminist pep rallies in the future.

Well, on this one, once is more than enough. The National Women's Conference came about through the good offices, if you will, of Gerald R. Ford in 1975 who asked $5 million to underwrite this nonsense. Next time ignorance and inexperience will be no excuse. Any congressperson who votes another dollop of tax dollars to further this kookery should be retired—without regard to race, creed, color, sex or national origin.

[From the Chicago Tribune, Nov. 28, 1977]

TAX MONEY USED FOR RIGGED CONVENTION

(By Nick Thimmesch)

The federally funded National Women's Conference was no place for a man. Nor for any poor soul who yearns for fairness in this vale of tears or for democratic procedures.

Rather, it is a classic case of a militant minority imposing its will on the majority—the American public, in this instance—and making it pay money for the experience.

It isn't so important that the Houston delegates rubber-stamped an action plan for ERA, abortion-on-demand, lesbian rights and government-controlled child-care centers. It is important that these highly debatable questions were endorsed under the rigged auspices of the federal government at a cost of more than $5 million to taxpayers.

While it is doubtful that the Houston proclamations truly represent the national will at this time, that argument can be put aside for a more important matter: Namely, the need for taxpayers to raise hell with those gigolo congressmen who fund this kind of authoritarianism.

As one who once served on a presidential commission, I know how single-minded staffers devise "action plans," arrange for witnesses sympathetic to those plans to appear before the hapless commission and try to ram through their viewpoint.

It doesn't always work, but it evidentally did in this episode. Militant feminists bamboozled Presidents Ford and Carter, and Congress as well, to back "women's rights" (motherhood and the flag are now obsolete shibboleths), though their real purpose was to win government blessings for controversial, partisan and minority views.

In July 1976, eight months before the first state conference on women was held, a national commission published the manual that yet-to-be-elected delegates were to follow—or else. It was titled "To Form a More Perfect Union" and included arguments for virtually all the controversial issues ultimately rubber-stamped in Houston.

In early 1977, President Carter, probably to salve an old political enemy, appointed Bella Abzug to head the commission running the Houston show. That act was a green light for militants across the land to stampede the state conferences, using muscle tactics to

reduce so-called traditional women to minimal or no-representation status on state delegations.

The militants used dirty tricks that would have made Watergate villains blush. In Florida they cut off nominations of traditionalist women. In Michigan they used questionable floor maneuvers to do the same. In Kansas militant bosses of the conference shut the doors to a crowd of opponents, claiming erroneously that their presence would violate fire ordinances.

In North Carolina women voted for delegates on a Saturday afternoon only to be informed by militants late that night that the election would have to be held again because one name was missing from the ballot. By then many traditionalist women had either left or were leaving for home to be with their families the next day—Father's Day. Naturally, in the election rerun, the militants won it all.

Just as revolutionaries use the shock of political theater to intimidate moderate sorts, so militant feminists did in Hawaii and California to show and frighten off "nice" ladies. In Honolulu feminists staged a program in which women in leotards performed simulated lesbian sexual acts in a pay toilet.

At the California conference dildoes, vibrators, mini-abortion kits and books on the joys of masturbation were exhibited to attendees—all to show how women could become sexually independent of men.

Well, if Bella Abzug wants to use her own plentiful supply of money to pay for this exhibitionism, that's all right. But why should taxpayers be stuck for it?

To make sure the rubber stamp couldn't be vanquished, Abzug and her fellow commission members, including Jean O'Leary, co-chief of the National Gay Task Force, were careful in their mandated selection of 400 at-large-delegates to pick an overwhelming majority sharing their views. For tokenism they also chose a black, Dr. Mildred Jefferson, chairman of the National Right-to-Life Committee and a distinguished professor of medicine.

Finally, in the best sharp-politics fashion, the militants trotted out the wives of Presidents Johnson, Ford and Carter—an unwitting array of dupes—to bless their conference, Middle America style.

Here's some scolding for the press. Why did editors send mostly feminists to cover Houston when the editorial requirement surely called for the dispatch of some H. L. Mencken types? Sending feminist journalists to Houston only padded the cheering section, and most of the coverage showed it.

No matter. I don't care whether ERA is ratified or not. The issue here is whether federal money should be used to support a partisan cause. Such misuse leads to what federally funded ($56,000 per year) White House assistant Midge Costanza did in Houston—calling for the defeat of political opponents. Will we next be paying taxes to fund political vendettas?

SUN DAY RESOLUTION

Mr. HART. Mr. President, as a member of the national board of directors of "Sun Day," I am pleased to join 53 of my colleagues in sponsoring Senate Joint Resolution 110 designating May 3 as a national celebration of the realization of solar energy.

The Sun Day activities across the Nation will heighten public awareness of the tremendous potential of solar energy in providing a substantial percentage of our energy needs.

Mr. President, the fact of the matter is that the Nation is far ahead of its leaders in anticipation of the widespread use of solar energy. In a poll conducted last fall by the Cambridge Survey Research Institute, 38 percent of the respondents nationwide thought solar energy would be a main source of power by the year 2000. This was equal to the percentage that chose a more established candidate, nuclear power.

The Federal commitment to the realization of solar energy has increased thirtyfold over the past 4 years—from $10 million to $300 million. However, this funding level comprises only 3 to 4 percent of the Federal energy budget, and is paltry in comparison to programs to develop a number of energy technologies with less promise of early realization, widespread acceptance and benign environmental consequences. Rather than expanding the Federal commitment to solar energy, the administration's proposed budget for next year would—if adopted—actually reduce the Federal resources devoted to the early realization of this energy alternative.

Mr. President, foresight is in devising solutions to our increasingly critical energy problems. The transition from an economy which is dependent upon depletable fossil fuels to greater reliance on renewable energy technologies will be a monumental undertaking, requiring an unprecedented peacetime investment of the Nation's resources. But by acting now, we can preempt the possibility that sudden shortages of more traditional energy sources will cause radical distruptions of the Nation's economy and social fabric. A national commitment to solar today will ease the transition to a post-petroleum world.

The National Energy Act, which is pending in conference, will do a great deal to promote the use of solar energy. However, much remains to be done in this area.

Mr. President, I hope that my colleagues will be active participants in the Sun Day activities in their respective States, and that this national celebration will serve to renew our commitment to the early realization of solar energy.

BALANCED GROWTH AND ECONOMIC DEVELOPMENT

Mr. BURDICK. Mr. President, on February 1, North Dakota State Senator Francis Barth, who is the assistant minority leader of the North Dakota State Senate, testified before the White House Conference on Balanced Growth and Economic Development. I believe Senator Barth made a number of important points about the way attempt to plan for the future, and I ask unanimous consent that his testimony be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT BY FRANCIS BARTH

This Conference is most timely because we are at a critical crossroad in the entire matter of economic development. This is true for the Nation; it is even more true for those of us in the Old West states of Montana, Nebraska, North Dakota, South Dakota and Wyoming.

Nationally, we are beset by a pressing energy problems, our unfavorable balance of payments, and continuing inflation creating a disastrous situation for our farmers and ranchers. In our own Region, we feel the brunt of these national problems perhaps more acutely than other areas of the country, particularly the current farm cost-price squeeze which is driving our farmers nad ranchers steadily toward bankruptcy, and the Nation's need for expanded development of our remaining national energy resources—a great share of which lie in the Old West Region.

Our agricultural and energy problems bring the objectives of this Conference home to us in the Old West in most realistic terms. I applaud the Congress and the Administration for seeking the broadest possible public participation in developing solutions to these and other national economic problems.

We have a peculiar dilemma in our Region, calling for a high degree of coordinated planning among our Old West states and between our Region and the remainder of the Nation. We are literally the breadbasket of the world. For instance, North Dakota is responsible for 90 percent of the Nation's production of hard red spring wheat, 85 percent of the barley and 90 percent of the flax seed. At the same time we find ourselves in possession of the world's largest remaining coal reserves at a time when coal is one of our most valuable energy alternatives. Eighty percent of our Nation's lignite coal reserves lie in the Fort Union formation in Montana, Wyoming and Dakota.

These bountiful resources are not unmixed blessings. While there may be no basic contradiction in the dual role which nature has thrust upon us, it takes little imagination to recognize the many planning and operational problems confronting our states and localities in such areas as reclamation, water usage, environmental controls, removal of land from agricultural productions, and socio-economic impacts of growing industrialization upon an agriculture-oriented economy.

For instance, we are willing to share our energy with the rest of the Nation, but we feel our neighbors should understand we cherish our way of life and we want assurance as we do develop our energy that our traditional ways will be interrupted as little as possible. We value our role as the greatest food-producing area in the world, but we must have realization upon the part of others that this role also involves problems. We meet at a time when these problems were never more dangerous to the long-range welfare of our producers.

There are solutions, as there are whenever concerned parties get together and work out feasible and effective actions. But I am concerned with the profusion of governmental parties and agencies which inevitably become involved in problem-solving efforts. An area which values its individual freedom highly, an area which has a particular dislike for government red tape, we find ourselves overrun with well-intentioned agencies and officials whose positive results in many cases are eclipsed by the confusion, havoc, duplication and waste which result from their efforts. I have two suggestions for improving these efforts and they both involve a larger role for the Regional Economic Development Commissions.

These suggestions are:

1. Economy of action and dollars through better coordination of governmental efforts from the Federal level to the local level.

2. A mechanism which keeps the decision-making as close to home as possible.

Failure to adhere to these two principles is at the heart of so many of our governmental failures today. The complexity of governmental efforts requires an unremitting effort

to eliminate duplication and waste and to give careful and thoughtful consideration to every dollars spent. And in our anxiety to have the advantage of federal dollars, we as a Nation are inclined to forget that our governmental decisions will be more effective if they are made closer to home, fashioned and influenced by those who will be most intimately affected.

The answer to these two basic needs lies with the Regional Economic Development Commissions. In their relatively few years of operation, they have demonstrated an unusual capability of coordinating federal actions with those of a group of states to bring about an effective solution to a common problem. And contrary to the usual federal-state pattern, the Commissions are structured so that they not only provide a high degree of coordination, but they maintain the decision-making process where it belongs—at the grass roots level.

There are never enough tax dollars to go around. We must constantly strive to achieve more for each dollar spent. The key to achievement of this objective will be found in permitting a larger coordinating and decision-making role for the Regional Commissions. I urge this Conference to give favorable consideration to larger role for the Commissions in our governmental structure.

Mr. HART. Mr. President, President Carter, in his environmental message to Congress last May, promised to direct the Council on Environmental Quality to take a serious look at the National Environmental Policy Act (NEPA) process to see if it is, in fact, serving the purpose originally intended in the National Environmental Policy Act.

To date, we have seen evidence of the fact that the CEQ is taking this charge seriously. Last December, the Council began to solicit comments from other agencies on ways to streamline the NEPA process, including a limit on the number of issues to be considered in an environmental impact statement (EIS) as well as a limitation on the overall length of any statement.

However, another NEPA issue is beginning to take shape, and the bureaucratic battle lines are forming over the Council's proposal to require an EIS for certain major Federal international activities.

We in the Congress are going to hear more and more about this issue in the future, and I would, therefore, like to recommend to my colleagues several interesting articles on the subject.

Mr. President, I ask unanimous consent that an article from the National Journal by CEQ Chairman Charles Warren and the environmental study conference fact sheet of February 3, 1978, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

INTERNATIONAL ENVIRONMENTAL IMPACT STATEMENTS RUN HEAD ON INTO FOREIGN POLICY, ECONOMIC QUESTIONS

(By Ken Murphy)

The much-publicized interagency struggle over the Council on Environmental Quality's proposed international impact statement rules should be coming to a head soon.

The new rules themselves, still in draft form, are not all that is at stake. CEQ's standing in the Carter administration and its credibility also are on the line.

Whether the dispute will boil over into Congress is uncertain at this point, but CEQ is trying to steer clear.

The requirement for impact statements on major federal actions abroad, such as nuclear export licenses and development aid, is only one small part of the council's proposals to overhaul and streamline the whole impact statement process. But it certainly has touched off the most controversy. The overhaul, mandated by executive order, is now undergoing interagency review and should be proposed formally for public comment in March.

Some recent news reports on the struggle have been misleading, resulting in much confusion. They also have dwelled on costs and problems, ignoring potential benefits.

CEQ Rationale: At present, many agencies with international activities have voluntarily developed environmental review programs under the National Environmental Policy Act. CEQ is now proposing to write specific impact statement requirements into binding regulations. They are based on informal proposals by CEQ's past chairman, Russell Peterson.

The council's immediate goal is to make U.S. decisionmakers, and indirectly foreign nations, more aware of the environmental consequences of major U.S. actions abroad. The United States simply should not be promoting environmentally questionable projects abroad, CEQ contends. In fact, it should be leading the way in protecting the world's environment. That is CEQ's ultimate goal.

Head-On Collision: The council, however, has run head on into a rather formidable array of opponents. The most outspoken—the State Department, the Export-Import Bank and the Nuclear Regulatory Commission—don't dispute CEQ's goals, and some of them point to their own voluntary environmental review programs as proof. But they do object strenuously to CEQ's move to establish specific impact statement requirements. The requirements are so rigid as to embarrass foreign leaders, infringe on other nations' sovereignty, impose U.S. environmental standards on the world and hurt U.S. exports, they believe.

CEQ's main response is that it is not tied to the draft rules and is willing to negotiate with agencies to meet their concerns.

Another real factor in the opposition, although the agencies won't admit it, is normal bureaucratic resistance to change.

Both Sides Cloud Issues: Still, CEQ's critics have raised a number of questions that the council, as yet, has failed to address head on. At the same time, neither have the critrics recognized the need for better environmental reviews or their potential benefits—for this country, foreign nations and the global environment alike. As a result, CEQ and its critics at times seem to be talking "at" rather than "to" one another.

The debate over the international rules is very reminiscent of the fight over impact statements in this country in the early 1970s, when opponents were predicting disaster. The predictions of course didn't come true for the most part. A key reason impact statement requirements have worked in this country is that everybody is playing by the same rules. That obviously is not the case in the international context, and that difference is the source of all the potential problems with CEQ's international rules.

Basic Policy Question: The potential foreign policy and economic problems vary with the type of action in question. For example, U.S. aid to developing nations should not present insurmountable problems, in part because the U.S. Agency for International Development, the main aid agency, supports CEQ's efforts and also because it seems fair to attach strings and conditions to foreign aid.

However, for major U.S. exports falling under the CEQ requirements because they are U.S.-licensed or financially assisted, the potential problems may be more severe, and the policy choices more difficult. For example, if the impact statement requirement does in fact delay an export license or U.S. financing the foreign nation might turn to the U.S. competitors. The requirement then not only has cost the United States the sale, but it also has done nothing to improve the environment.

Here lies the most difficult trade-off. Although it is by no means certain that the impact statement requirement will turn foreign nations to other suppliers, what if it does? On moral grounds, the answer may be that the United States simply shouldn't promote environmentally questionable exports. But if the goal is to protect the environment, then perhaps a rigid impact statement requirement is not the way to go.

The Proposals: Before taking up the specific issues, it is important to understand what CEQ's proposed international rules do and what they don't do.

The new rules would apply only to major federal action abroad that significantly affect the environment. They would not apply to the vast majority of overseas transactions, nor would they apply to any other U.S. actions abroad, for example by private companies where the federal government is not involved in a major role.

Exactly what would and would not be covered is not spelled out in the rules, and CEQ is reluctant to discuss the question, saying it is subject to negotiation with individual agencies. If an agency decided an action was not covered, it could be taken to court, just as with domestic impact statements.

However, the rules almost certainly would apply to nuclear export licenses, many major aid projects and many major Ex-Im Bank loans, among other things.

The specific impact statement requirements vary with the scope of environmental effects. For major federal actions significantly affecting the United States and its trust territories, the global commons—the oceans primarily—and Antarctica, CEQ proposes the same sort or impact statements now required on domestic projects.

However, for major federal actions significantly affecting the environment of foreign nations only, the agencies would have an option—a "foreign environmental statement" much more limited in scope than normal statements.

In proposing this flexibility, CEQ seems to recognize potential foreign policy and trade complications, as well as the fact that neither the U.S. environment nor the global commons would be affected.

No Decision Mandated: Even on major actions, the proposals would require only the preparation of statements, not a decision one way or the other on the action in question. For example, just as with domestic impact statements, a federal agency could discover terrible impacts and still go ahead with the project.

This is one point that some news reports totally missed.

The Legal Justification: The most immediate issue is legal—whether CEQ can require federal agencies under the National Environmental Policy Act to prepare impact statements on their major actions abroad. Both sides of the issue cite different sections of NEPA and its legislative history, as well as subsequent administrative and judicial precedents, to support their positions. The most

that can be said is that the record is by no means clear.

The Underlying Issues: Underlying the immediate legal issue, however, are the broader, and ultimately more important, policy questions:

Would CEQ's rules impose U.S. environmental standards on foreign nations, to the detriment of our relations with them?

Would they hurt U.S. imports by raising costs, leading to delays or turning foreign nations to other suppliers?

Would preparing statements be required projects in foreign countries be practical?

Should impact statements be required on major U.S. actions abroad?

A Global Policeman: A major charge leveled against CEQ's proposals is that they would impose U.S. environmental standards on foreign nations. When pinned down, CEQ's opponents acknowledge that the proposals don't do it directly. But they would do it indirectly, and the foreign policy consequences would be just as real, critics say.

For example, the purpose of impact statements on nuclear export licenses is to influence the decision. If the license is denied, critics say, the United States is, in fact, imposing its environmental standards. The foreign nation wants the reactor and feels it meets its own environmental standards, yet the United States says that's not good enough.

CEQ's main response to this charge is that its proposals don't require a decision one way or the other.

Foreign Policy Complications and Practical Considerations: The proposed rules probably would require collection of data on foreign soil. One touchy question is how to collect the data: send over U.S. researchers or force the foreign nation to do it. Both alternatives are fraught with practical problems and foreign policy conflicts, according to CEQ's critics.

Then what about publishing the impact statement, critics also ask. Foreign leaders are not going to be too happy about the publication of potentially critical or embarrassing information about their country.

CEQ responds that it stands ready to tailor the impact statement requirements to "the practical considerations of operating in the international context." In addition, it proposes specific safeguards, such as keeping the impact statement confidential.

The council's critics doubt whether the safeguards can be adequate. It is likely that impact statements would be subject to the Freedom of Information Act.

Another problem, particularly with exports, is that even if the foreign nation agrees to make a U.S.-assisted action more environmentally sound in order to gain U.S. approval, the United States has only limited leverage in monitoring and enforcing the agreement. Once an export license is granted, that's it. The only way to enforce an agreement is to use the next export license application.

All these problems, critics conclude, make it impossible for the United States to move unilaterally with impact statement requirements. The only way to assess the environmental impacts of U.S. actions abroad is in cooperation with foreign nations, through negotiated treaties and other agreements.

The strong counter argument is that the United States already imposes other kinds of requirements on foreign transactions. Currently, foreign nations must either meet U.S. conditions on nuclear exports or forfeit the reactor. What is so bad, the counter argument goes, about adding environmental requirements?

Export Business Hurt: Press reports on whether impact statements would hurt U.S. exports are slightly misleading. CEQ is proposing impact statements only on those exports involving a major federal action significantly affecting the environment. They would apply only to a very few exports, in which the United States has a major licensing role or in which it has a major financial assistance or aid role. Even then, the rules would not require rejection of environmentally questionable exports. Most exports would be totally unaffected.

For example, the Ex-Im Bank finances about 15 percent of U.S. exports in dollar volume. According to a bank spokesman, only about 25 to 40 perent of this business might be subject to impact statement requirements.

For exports subject to impact statements, prices certainly would rise, but if the experience with domestic statements is any guide, the increase will be relatively minimal.

As for delays and red tape, the CEQ proposals probably will slow down the export process as agencies get used to impact statements. But again, if domestic experience is any guide, most delays will disappear as the impact statement process is fully integrated into the normal decision-making process.

However, the Ex-Im Bank counters that the international situation is totally different. In the United States, everybody is subject to the same rules, and everybody faces the same delays and cost increases. But in the international marketplace, competing exporters won't have to meet CEQ's rules and will be able to offer lower prices and fewer delays, making it even more difficult for U.S. companies to compete.

The Need for Environmental Statements: To the extent that environmental impact statements have improved U.S. policies on domestic projects, they would have the same potential in the international arena.

However, their success in this country is tied to the changes federal agencies have made in response to the issues raised in the statements. Whether federal agencies can or will respond as well in actions abroad and whether foreign nations will do likewise are major unanswered questions.

Past Experience with EIS Requirements: In support of its proposals, CEQ cites a number of successful examples of federal agencies preparing impact statements. These include statements by the State Department on the Panama Canal treaties, the Department of Interior and the Federal Power Commission on Alaska natural gas pipelines, NOAA on its hurricane seeding program and the Agency for International Development on its worldwide pesticide program.

CEQ plays up AID's experience in particular. AID says it has been able to undertake environmental analysis "without strain" on foreign relations, has achieved its mandate at the same time, has not cost the United States any jobs and has not experienced excessive costs.

However, it should be noted that AID has mainly been doing informal environmental assessments, not full-fledged impact statements. So although AID probably will endorse CEQ's full-fledged impact statement requirement, it opposes the requirements where impacts are in foreign nations only.

CEQ Objectives: According to CEQ, the new rules are intended to insure:

—if a product is banned or strictly regulated in the United States on health grounds, the U.S. agency should at least be aware of it before providing the product to a foreign nation

—full disclosure before an American decisionmaker takes an action that threatens natural resources of global importance

—the U.S. decisionmaker is aware if his actions, however beneficial to one country, cause adverse effects in another country.

Potential Benefits: CEQ says that much of the criticism of its proposals ignore their many potential benefits. Pointing to AID again, CEQ notes the widely acknowledged benefits of agency's pesticides assessment and the resulting decision to cut back on exports of DDT, which is banned in this country. AID has found, CEQ explains, that foreign countries themselves have welcomed the recommendations coming out of impact assessments.

NRDC Suit: The CEQ rules parallel a pending suit against the Export-Import Bank to require environmental statements on its foreign operations. The suit was brought by the Natural Resources Defense Council, a public interest law firm, which CEQ member Gus Speth founded and worked for before joining the council.

Contacts: CEQ: Caroline Isber, 633–7005. NRC: Carl Stoiber, 254–8017. State Department: Mary Elizabeth Hoinkes, 632–1700. Ex-Im Bank: Patrick Daddario, 566–8967. AID: 632–8548.

THE INTERNATIONAL APPLICATION OF NEPA

On January 6, the Council on Environmental Quality (CEQ) invited representatives of 30 federal agencies to discuss proposed regulations for applying the National Environmental Policy Act (NEPA) to U.S. Government actions abroad.

Nobody, not even in government, enjoys having new regulations imposed on his or her conduct, hence it was not surprising that the reaction to CEQ's proposals, regardless of their merit, was less than ecstatic. Various agency representatives criticized our draft regulations on the grounds that there is no legal justification for extending NEPA to U.S. actions abroad, that NEPA-caused delays would hold up U.S. exports and send foreign buyers elsewhere and that our regulations would impose U.S. environmental standards on other nations. Columnists Evans and Novak said the proposals "would make Uncle Sam the environmental policeman of the world."

Each of these complaints deserves an answer. In point of fact, there are solid justifications—in the legislative history of NEPA, in the language of the law itself, in court precedent, and in past agency actions—for applying NEPA to federal activities beyond our borders. Further, there is an excellent, pragmatic argument for doing so: it will inform all concerned of choices available and their environmental implications without imposing our environmental standards on other nations.

First, as to the law itself: NEPA speaks of "national policy" and "national heritage," but its references to the environment are not similarly circumscribed. Instead we find references to "man and his environment," the "natural environment", the "importance of . . . maintaining environmental quality to the over-all welfare and development of man", and the global term "biosphere". In Section 102(2)(F), Congress directs all federal agencies to recognize "the worldwide and long-range character of environmental problems. . . ." Nowhere does the Act specify that it is only the U.S. environment whose quality is to be guarded by U.S. agencies.

This legislative language is, I concede, indicative rather than definitive. As in so many cases, the legislative history may help us decide whether the Congressional rhetoric exceeded Congressional intent on NEPA, or whether the law was written to be as all-embracing as it appears.

And Congress has, indeed, addressed the question of NEPA's application beyond our borders. On October 8, 1969, during floor debate on NEPA, Senator Henry Jackson inserted into the Congressional Record this summary of an earlier House-Senate colloquium on national environmental policy: "(a)lthough the influence of the U.S. policy will be limited outside its own borders, the global character of ecological relationships must be the guide for domestic activities."

More explicitly, during oversight hearings held in 1971 (the year after NEPA was passed), the House Merchant Marine and Fisheries Committee specifically rejected the

argument that NEPA should not be applied to U.S. actions within the jurisdiction of another nation:

"Stated most charitably, the committee disagrees with this interpretation of NEPA. The history of the act makes it quite clear that the global effects of environmental decisions are inevitably a part of the decision-making process and must be considered in that context."

CEQ itself has been consistent in its interpretation of NEPA's international implications In 1971, the Council's Legal Advisory Committee urged federal agencies to apply NEPA to their actions in foreign countries. CEQ's 1973 guidelines for the preparation of environmental impact statements require the assessment of "both the national and international environment." Most recently, in September 1976, former CEQ Chairman Russell W Peterson stated in a memo to all agencies:

"(W)e advise that NEPA requires analysis and disclosure of federal actions on the human environment—in the United States, and other countries, and in areas outside the jurisdiction of any country."

Courts, as well, have addressed the international application of NEPA on several occasions.

In *Wilderness Society* v. *Morton,* 463 F. 2d 1261 (D.C. Cir. 1972), the D.C. Court of Appeals ruled that Canadian environmentalists had a substantial interest in the choice of route for the Trans Alaska oil pipeline, and that this interest was protected by NEPA.

In Sierra Club v. AEC, 4 ELR 20885 (D.D.C. 1974), AEC and the Export-Import Bank were sued to force their compliance with NEPA on nuclear exports. In this case, the court assumed that government actions abroad were covered by the Act.

In Environmental Defense Fund v. AID, 6 ELR 20121 (D.D.C. 1975), the Agency for International Development agreed to prepare an Environmental Impact Statement (EIS) on its pest management program. The settlement specifically required that the EIS cover impacts within individual foreign countries.

Finally, some agencies have already applied NEPA to some of their actions abroad. Examples include the State Department, with its recent EIS on the Panama Canal Treaties; the Interior Department and the Federal Power Commission, with EISs on the Trans Alaska natural gas pipeline; the National Oceanic and Atmospheric Administration, with an EIS on its hurricane-seeding program, and AID, on its worldwide pesticide program.

Asked by the Office of Management and Budget to comment on its experience with NEPA on foreign projects, AID Administrator John J. Gilligan replied, last December 9:

"(O)ur over-all experience is a positive one. We have discovered that developing countries themselves have come increasingly to recognize the inter-related nature of environment and development, and to seek to ensure that environmental considerations are adequately addressed in development projects."

AID, Gilligan continued, has been able "to undertake environmental analyses without strain" on foreign relations. Pertinent to the complaint about NEPA delaying imports and costing us sales, Gilligan wrote: "No project has fallen through because of required environmental analyses . . ."

Thus the language of NEPA is inclusive, not exclusive; CEQ's interpretation of the international applicability of NEPA is not novel, but dates back to 1971; the courts have ruled, in specific cases, that NEPA governs the actions of U.S. agencies abroad, and several agencies have implicitly recognized that governance by voluntarily filing EISs.

U.S. precedents aside, would not such an application of NEPA violate foreign sovereignty?

It is crucial to realize that NEPA imposes no environmental standards on anybody, not even on U.S. agencies. Pared to essentials, NEPA is a "full disclosure" law with two parts: 1) it requires every federal agency to analyze the environmental impacts of its proposed actions, and 2) it requires the agency to publish its analysis, so that other governmental agencies and the public can inspect that analysis for accuracy and thoroughness.

In the international context, NEPA would give foreign governments the same access to analytical data on a proposed U.S. action. After examining that information, the foreign government would make its own decision on the project, regardless of U.S. environmental standards. CEQ's proposed draft regulations require an agency to point out any activities that are "unlawful or strictly regulated" in the U.S.; however, should another nation choose to proceed with such an activity, illegal by U.S. standards, it would be perfectly free to do so.

Legal justifications aside, is it worth applying NEPA to foreign actions at all?

Within our borders and beyond them we have seen, again and again, the indirect environmental effects of well-intended projects create havoc with a nation's food supplies and its people's health. We have seen, for example:

In the Ryukyu Islands, the spread of dysentery and of trachoma, an eye disease, following the U.S. introduction there of piped, potable water;

In Indonesia, the destination of a vital protein source when a pesticide used by farmers to control rice pests also killed fish in the paddies;

In Egypt, a ten-fold surge in the incidence of schistosomiasis—a debilitating, sometimes fatal, disease—following completion of the Russian-financed Aswan Dam;

In Peru's Canete Valley, the uncontrolled resurgence of a cotton pest when it developed a resistance to DDT—but its predators, which formerly held the pest in check, did not;

In Brazil's Sao Francisco Valley, the forced expenditure of more than $150 million to resettle farmers and control floods following construction of a hydroelectric project financed by two international agencies, two U.S. agencies and private banks in Canada, France and the U.S.

Foreign policy considerations may warrant our supporting dubious projects abroad; at an absolute minimum, however, the underdeveloped nations to whom the bulk of our non-military assistance goes have a right to know when a project they want might get them into serious health, safety and environmental trouble.

For the most part, developing nations cannot now duplicate our environmental expertise; we should not force them to duplicate our environmental misfortunes. Our own pragmatic self-interest dictates that, when our government engages in activities abroad, we should help other nations look before they—or we—leap.

CEQ believes that NEPA requires such a look, not as a matter of prudence, but as a matter of law.

INDEPENDENCE DAY FOR SRI LANKA

Mr. MARK O. HATFIELD. Mr. President, I am most pleased to take note of the fact that on February 4 Sri Lanka commemorated its 30-year anniversary of independence from the British Crown. This is a particularly happy occasion given the continuing effort toward political and economic advancement made by Sri Lanka in these three decades of self-rule.

Politically, the seventh general election since independence was declared in Sri Lanka was held on July 22, 1977. The United National Party led by Mr. J. R. Jayawardene was returned to power with an unprecedented majority of 140 seats in an assembly of 168 seats. Prime Minister Jayawardene advocates a mix between the systems existing in the United States of America and in France. The last general election enunciated this constitutional change as one of its fundamental policies, and by virtue of the mandate it received the Government amended the existing constitution to provide for the Prime Minister to assume duties as the first Executive President of Sri Lanka. On the 4th of February, Mr. J. R. Jayawardene assumed duties as the President of Sri Lanka and will in the future be both the head of state and head of Government of Sri Lanka. Future presidents will be elected once in 6 years by universal adult franchise. All citizens over 18 years will have the right to vote. Representatives to the national assembly will continue to be elected on the same basis.

With the assumption of duties of Mr. Jayawardene as President of Sri Lanka, one of the fundamental principles of the U.S. Constitution, the separation of powers between the executive, the legislature, and the judiciary, has been reinforced.

Economically, Sri Lanka is embarking on a course to revive and resuscitate economic growth and development. Special emphasis has been laid on increasing employment opportunities, particularly for the youth of the country. Stimulating domestic savings and investment and reducing pressures on balance of payments have also been considered important goals of economic policy. The measures proposed in the budget are designed not only to bring about substantial improvement in the domestic economy but are also meant as a signal that Sri Lanka is adopting policies which will provide a stable basis for sustained growth.

In order to free the economy from the controls and restrictive practices which had hampered development in the past, the new Government instituted a reform of the exchange system accompanied by a substantial degree of liberalization of the country's external trade. The exchange rate was allowed as from November 15, 1977, to float in response to the basic exchange market developments. The prevailing complex structure of import controls, allocations and licensing procedures on external trade and payment ceased to be effective from this date. Import monopolies which had been extended to public sector agencies have also been largely ended. A very large part of exchange control has also ceased to exist. This exchange reform and trade liberalization program is supported by substantial economic assistance made available to Sri Lanka by the International Monetary Fund, the World Bank, other financial institutions, and friendly governments, foremost among whom is the United States of America.

The government has decided to accelerate the pace of the development of the Mahaweli Ganga basin, the longest

river in Sri Lanka. The estimated potential of this river is treble the hydro power presently generated and double the land area that is presently developed under major irrigation schemes. The aim of the government is to complete within 5 to 6 years a development originally planned to be spread over 23 years. The proposal is now under the active consideration of the World Bank and once feasibility studies are over the government will be seeking the assistance of the World Bank itself, the Sri Lanka aid group and other friendly countries for this purpose. It is hoped by Sri Lanka that a generous and enthusiastic response would be received for this proposal from donor countries. The current estimate is that 40 percent of the cost of the project amounting to about $800 million will have to be met from external financing. The additional $1,200 million required to complete the project would be generated within the country.

Mr. President, I applaud Sri Lanka on its 30-year anniversary of independence and join with many other Americans in wishing it continued success in the future. On a more personal note, I would like to take this opportunity to extend my best wishes to my good friend and Sri Lanka's able Ambassador Neville Kanakaratne. I have been informed that Ambassador Kanakaratne is relinquishing his duties on February 28 of this year. He has made an outstanding contribution to the growing friendship between the people of the United States and Sri Lanka during his stay in Washington and I wanted to publicly thank him for his friendship and assistance over the years.

LETTING THE DOLLAR FLOAT

Mr. PROXMIRE. Mr. President, the Treasury and Federal Reserve have recently begun to intervene more actively in the foreign exchange market. I believe that the new policy entails grave risks of substantial loss to Treasury and the Fed, and is detrimental to the economy as a whole.

The United States benefits from a floating dollar. Since 1973, U.S. policy has been to let the exchange rate of the dollar be determined in the marketplace. Other countries have sought to manage exchange rates for their currencies through massive central bank intervention in the markets. In 1977 alone central banks intervened to the tune of $30 billion. The losses are not reported in most cases, but there is good reason to believe that they were substantial. One indicator might be the record of U.S. losses on previous interventions. Since 1968, Treasury and the Federal Reserve have lost $1 billion in the foreign exchange markets. Nearly the entire sum reflects losses on swap agreements entered into with other central banks prior to 1973. From March 1973 until last month the United States, quite sensibly in my opinion, let the dollar float and avoided market intervention losses.

The parameters of the new policy are not clear, but the initial signs are worrisome. Not only has Treasury opened a large swap line with the German Central Bank to supplement the Federal Reserve System swap network, but the Fed also raised the discount rate in an effort to influence the exchange markets. There is a clear danger that policy will drift back to a defense of the exchange value of the dollar. Higher interest rates adopted to defend the dollar would create costs in the domestic economy far out of proportion to any conceivable gain. Furthermore, a policy of market intervention and high domestic interest rates is likely to be unsuccessful, except in the very short term, because exchange rates respond to different national rates of inflation, growth, and productivity. If the market is allowed to work, exchange rates will move to levels which will equilibrate international trade.

Central banks do not like to see the value of their currency determined by the marketplace. They prefer to manipulate the rate to serve their own objectives, which in too many instances include permanent export surpluses. Since 1973, foreign central banks have prevented their currencies from appreciating against the dollar as much as market considerations would have dictated. The result has been an artificial stimulus to U.S. imports and retardant for U.S. exports.

If exchange rates were allowed to move more freely, the nearly $30 billion trade deficit which the United States incurred last year would undoubtedly have been much less. Arthur Okun reports an estimate that the depreciation of the dollar in 1977 should eventually reduce our trade deficit by $7 billion.

Dollar depreciation need not be inflationary. As other economists have noted, if the Federal Reserve follows appropriate monetary policies, the minor inflationary implications from dollar depreciation can be totally offset.

If other countries choose to manipulate the exchange rates there is very little we can do about it. But at least we can avoid repeating the mistake ourselves. As Prof. Milton Friedman has observed, Treasury and Fed intervention is a matter of gambling with public money for ends which do not serve the public interest.

It is rare to find leading Keynesian economists and monetarists in complete agreement on an economic policy question, but that is the case with respect to letting the dollar float. Arthur Okun, Milton Friedman, and Wilson Schmidt, former Deputy Assistant Secretary of the Treasury, currently professor of economics at Virginia Polytechnic Institute, agree: The United States should stay out of the exchange markets. Schmidt suggests that central banks, by resisting the appreciation of their currencies relative to the dollar, may precipitate market disorder. Then they beg the United States to help them intervene. Disorderly markets and speculation may be more than a figment of central bankers' imaginations; they may be a product of their own foolish intervention strategies. Professor Friedman recommends, and I concur, that the time has come for Congress to seriously consider removing the authority of the Federal Reserve and the Treasury to enter into swap agreements for the purpose of exchange market intervention.

Mr. President, I ask unanimous consent that articles by Professors Friedman, Okun, and Schmidt, and a table of profits and losses on U.S. foreign exchange transactions be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

According to one high government official, the dollar had by early January come to be "like the girl who doesn't believe you love her until you spend a lot of money on her." So, at the President's behest, the U.S. demonstrated its affection. The Federal Reserve began doing more intervening in foreign-exchange markets. It also raised the discount rate, the interest rate U.S. banks pay when they borrow from the Fed. These measures were designed to calm turbulent markets and assure nervous foreign officials that the U.S. is serious about defending the dollar.

Whether these actions will succeed in tranquilizing the agitated exchange markets for any substantial period of time remains debatable. Of even greater moment, however, is the question of whether the U.S. should be making a serious effort to support the value of the dollar. Many prominent economists feel that there has already been too much intervention in the foreign-exchange markets.

One economist who holds this view very strongly is Wilson E. Schmidt, a former deputy assistant secretary of the Treasury and now a professor of economics at Virginia Polytechnic Institute. Sanford Rose, a member of FORTUNE'S Board of Editors, recently sat down with Professor Schmidt to discuss what's been happening to the dollar—and what, if anything, the U.S. government should do to prop it up.

SCHMIDT. Last year will go down in international monetary history as the year of the filthy float. The central banks of the industrial nations intervened massively in the foreign-exchange markets to reduce the huge glut of dollars that threatened to depress the U.S. exchange rate.

ROSE. Everyone knows that the dollar has been depreciating against the D-mark, the yen, and the Swiss franc. But few people realize that the dollar would be falling much faster if central banks did not intervene. In the last quarter of 1977, the German central bank alone put more than 10 billion marks into the foreign-exchange markets to keep the dollar from skidding. All told, central banks soaked up more than $30 billion in 1977.

SCHMIDT. If the Germans had let the dollar fall by as much as the marketplace would have pulled it down, it would now be worth considerably less than the current exchange rate of about two marks. An American consumer who wanted to buy a German product would have to pay more dollars than he does now, and that would curb our imports of German goods.

ROSE. By flooding the foreign-exchange markets with their currencies, Germany, Japan, and Switzerland are making it possible for Americans to buy imported goods more cheaply than they otherwise could. By restraining the rise in their own exchange rates, these countries are, in effect, subsidizing U.S. consumption.

SCHMIDT. That's certainly true. The official intervention also affects our exports, of course. If the marketplace—and not central banks—determined our exchange rate, a product that sold for a dollar in the U.S. would now sell for less than two marks in Germany. An American manufacturer might

be able to raise his dollar price without changing his previous mark price. By diverting goods from the U.S. market to the German market, he could increase his profit margin without damaging his sales potential. In other words, if the dollar had been allowed to seek its own level in the exchange markets, imports would have fallen and exports would have risen. Last year's trade deficit would never have topped $30 billion.

ROSE. Besides damaging our trade balance, official intervention in the currency markets also poses a more serious threat. When exchange rates are officially supported, local banks that receive foreign exchange from, say, exporters sell this exchange to the central bank, which pays for it by crediting their reserve balances. With their reserves thus augmented, the local banks can expand their loans and deposits by some sizable multiple of the foreign exchange they originally received. The potential therefore exists for a runaway expansion of foreign money supplies. That's what used to happen under the old Bretton Woods system. During the Sixties and early Seventies, a number of countries that were unwilling to adjust their exchange rates lost control of their money supplies.

SCHMIDT. We may be drifting back to the world of the Sixties and early Seventies, but we are ambivalent about that drift. And this ambivalence, in a very important sense, is the key to the recent crisis in the exchange markets. As 1977 wore on, it became clear that many countries were supporting the dollar at an overvalued level. Gradually, the marketplace came to understand this fact. Then the Swiss and the Germans got alarmed at the quantity of dollars they were absorbing. So they started complaining loudly about "being forced to finance the U.S. deficit." They strongly suggested that the U.S. should take a more active role in the defense of its own currency.

In other words, just about when private holders of dollars began to realize how extensively central banks were buttressing the U.S. exchange rate, a serious question arose as to whether the major European countries and Japan would continue to support the dollar unless the Federal Reserve started doing some supporting of its own. And no one was sure that the Fed would be willing to offer that support. This created widespread uncertainty, which undoubtedly triggered speculative movements, such as the flight of dollars into Swiss francs.

ROSE. You're suggesting that if the surplus countries had allowed the dollar to weaken gradually in the marketplace, there would not have been any political fuss or end-of-year crisis and our overall trade problem would now be much less worrisome.

SCHMIDT. Yes. Let's look at the record. From 1971 to 1973, when the U.S. exchange rate was allowed to fall sharply, prices of U.S. manufactures, relative to those of our major trading partners, also fell. Then these relative prices remained approximately stable from 1973 to about the middle of 1975. In 1975 and 1976, U.S. price competitiveness began to deteriorate as the American economy recovered from the recession faster than the rest of the world. This deterioration might have been at least partially arrested if our exchange rate had fallen. Instead, our competitive position worsened sharply as central banks stepped up their intervention to prevent the dollar from depreciating in late 1976 and 1977.

ROSE. Official intervention kept us from reducing the selling prices of our manufactures in foreign markets. And that is crucial. Everyone expects us to run a huge deficit with OPEC. What brought on the current crisis was the disappearance of our once-robust surplus in manufactured goods.

SCHMIDT. At the same time, by buying up huge quantities of dollars and reinvesting them in U.S. Treasury obligations, foreign central banks helped hold down interest rates in the U.S. Low interest rates tend to stimulate capital outflows and reduce capital inflows.

ROSE. In other words, official intervention in the currency market has weakened both the trade and the capital accounts of the U.S. balance of payments. That's certainly one way to undermine worldwide confidence in the dollar.

SCHMIDT. Some European central banks could take a lesson from the British. When the pound climbed to about $1.72, the British decided to support the rate. They didn't want the pound to appreciate any further because that would have distressed their exporting community. As a result, from the end of 1976 to October, 1977, the British bought up about $16 billion. Then they realized that by buying all those dollars they were creating too many pounds. Resolving to head off further inflation, the British announced that they would no longer support the dollar. The pound was free to seek its market level, and it gradually appreciated, which meant that the dollar gradually depreciated.

ROSE. There's too little awareness of the desirability of gradual market-determined currency changes. In theory, as the dollar depreciates, the domestic price level rises, and the real value of consumers' liquid holdings—for example, bank balances—declines. In an effort to rebuild their savings, consumers tend to buy less, so there is likely to be a temporary slowing in economic activity. If the Federal Reserve tries to offset this by stepping up the growth of the money supply, it aggravates inflation and so defeats the purpose of the depreciation, which is to reduce spending on imports and cut down on the consumption of domestically produced goods that could be exported.

A rapid and substantial fall in the value of the dollar makes it extremely difficult for the Fed to resist public pressures to expand the money supply. But if the exchange rate falls slowly and steadily, any adverse effect on the economy should be barely discernible.

SCHMIDT. What you say underscores the stupidity of even considering massive U.S. intervention to support the value of the dollar. If the Fed takes over the job of maintaining our exchange rate—a job it may not want and is probably not even capable of performing—it is merely postponing the inevitable. Eventually, the dollar will have to depreciate, and the longer we wait, the more steeply it will have to fall.

As you point out, if the eventual depreciation turns out to be extensive, the Fed may come under pressure to prevent a rise in unemployment by inflating the money supply. This action could easily nullify the effects of the depreciation, and those countries that now complain about having to finance the American deficit will be forced to do even more financing.

ROSE. Unfortunately, because of all that filthy floating you spoke of, it is now probably too late for gradual exchange-rate depreciation.

SCHMIDT. There certainly will be further depreciation, because the dollar is still seriously overvalued. That is borne out by the data on the non-oil trade balance. If we subtract out all our trade transactions with the OPEC countries, our 1977 trade deficit still amounts to approximately $7 billion. And it will probably get worse next year. So the value of the dollar must eventually fall by a fairly sizable amount, and the depreciation will have to be accompanied by a much tighter domestic monetary policy than we now have.

ROSE. An appropriately tight monetary policy could limit the inflationary impact of that inevitable depreciation. But a severe impact on the domestic economy could be avoided if countries would let the marketplace adjust exchange rates on a daily basis. That would correct minor balance-of-payments problems before they can become major headaches requiring drastic solutions. As things are, however, the float is getting to be so dirty, so managed, that it's coming to resemble a fixed-rate system. Wilhelm Röpke, the great German economist, once said that trying to hold the exchange rate constant, while allowing everything else to move, reminded him of the behavior of a circus clown. The clown, seeing that a piano stool was too far from the piano, tried with sweat streaming down his face, to push the piano toward the stool. Will this situation change soon?

SCHMIDT. I think not. I detect tendencies in the direction of increased exchange-rate rigidity. First, the Administration seems to be pushing for more international reserves, which reminds me of the days when both government officials and a considerable number of academicians argued that the expansion of international liquidity could serve as a substitute for exchange-rate adjustment.

Second, we have added to our swap lines—a procedure by which the U.S. borrows foreign currencies in order to redeem surplus dollars from foreign holders and thus prevent our exchange rate from falling.

Third, one hears a disturbing amount of talk from high officials about the need to intervene in order to prevent disorderly currency markets. But what is a disorderly market? There is no convincing definition.

Fourth, many countries are trving to freeze exchange rates by means of direct controls over international transactions. The U.S. government, for example, is under continuing pressure to introduce more import quotas and "orderly" marketing arrangements as a partial substitute for exchange-rate adjustment.

ROSE. Aren't such protectionist efforts self-defeating?

SCHMIDT. In my opinion, yes. When exchange rates are fixed, political retaliation usually limits the effectiveness of quotas. If we won't let the Japanese sell us steel, they might refuse to buy some of our goods—say, soybeans.

When exchange rates are reasonably free to float, the retaliatory mechanism works automatically. Suppose that the U.S. clamps quotas on a whole gamut of Japanese goods and, as a result, Japanese exports to the U.S. fall. Such a decline would cause a floating yen to drop in value, or, what amounts to the same thing, prevent from rising in value. This process would raise the prices of U.S. goods in yen, relative to what they would have been. Some industries in the U.S. would become more effectively insulated from Japanese competition, but at the expense of other industries that would find it harder than ever to penetrate the Japanese market. By restricting imports, we would end up restricting exports as well.

ROSE. We are also seeing new capital controls designed to keep exchange rates from changing. The Germans, for example, have just introduced measures to restrict capital inflows that would, of course, raise the value of the mark. This step helps account for the recent appreciation of the Swiss franc relative to the mark. Since speculators could not get funds into Germany, they moved them into Switzerland instead.

SCHMIDT. The term "speculation" is much misused in this context. Many people envision the typical speculator as an Arab sheikh who has just instructed his money managers to sell dollars and buy Swiss francs. But that's not a very accurate picture of reality.

ROSE. No, it isn't. There is little evidence that OPEC investors have moved large sums out of dollars. If they did, they would reduce the value of their remaining dollar assets, which, of course, are quite large. In other words, OPEC dollar hoards would buy fewer goods in world markets. By lowering the

global purchasing power of their assets, such speculators would, in effect, be remitting a portion of the oil tax that was imposed on the industrial world some four years ago.

SCHMIDT. Moreover, there are few attractive places where investors who want to switch out of dollars can go. The Germans don't want foreign money. The Swiss will take in a little, but not very much. And what the Swiss take in, they quickly funnel out again, primarily by encouraging their banks to place funds in Eurodollar investments. The French are not especially anxious to get foreign money, and neither are the Japanese. About the only place where flight capital is welcome is Britain.

ROSE. Of course, there are some exceptions. German and Swiss exchange controls apply to private, not official, speculators. And there is some evidence that central banks, particularly those in Latin America, have recently diversified their portfolios of foreign-exchange reserves, moving out of dollars and into marks and Swiss francs.

These portfolio shifts account for some, but by no means all, of the pressure on the dollar. The bulk of speculation against the dollar, of course, takes the form of what are called "leads" and "lags." If a German importer of American goods is pessimistic about the value of the dollar, he may decide to delay payment to his U.S. supplier. That's a lag. If the dollar then depreciates, the German company can pay off its dollar obligations with fewer marks than would have been required had it paid promptly.

A lead involves speeding up the payment of bills or dividends that are denominated in dollars. For example, U.S.-based subsidiaries of foreign corporations frequently accelerate dividend payments whenever the dollar looks shaky. Indeed, some of these companies have on occasion borrowed as many dollars as they could in the U.S. and sent the proceeds overseas. In the early Seventies, the Japanese trading companies borrowed huge sums in the U.S., knowing that after the dollar sank, they could repay their debts with a much smaller quantity of yen.

Leads and lags have the effect of increasing the supply of dollars in foreign-exchange markets, while simultaneously reducing the demand for them. The combination of more supply and less demand can cause a sharp fall in the exchange rate. During 1977, the U.S. needed a steady net inflow of about $14 billion in order to finance our excess purchases of foreign goods and services. If, during any given period, just a small number of the major buyers of U.S. exports decided to delay payment of their bills, the demand for dollars could have fallen far short of the supply, and the value of the dollar would have dropped, unless it was propped up by official intervention.

SCHMIDT. Speculation by leads and lags causes a great deal of transitory turbulence in the exchange markets and, incidentally, helps account for some major statistical discrepancies in the balance of payments. In the third quarter of 1977, for example, the gap between recorded debits and recorded credits reached a record $5.2 billion. Undoubtedly, a substantial part of this discrepancy reflected the fact that foreign importers were deferring payment for goods that had already been involved and reported to the Department of Commerce as U.S. exports.

ROSE. The more rigid exchange rates are, the more confident speculators can be about the direction of future exchange-rate movements. With so many opportunities for profitable speculation, it is little wonder that there is pressure on central bankers to support exchange rates.

SCHMIDT. Most of the pressure, I believe, is self-induced. No central banker wants the marketplace to determine what his currency is going to be worth. The major countries have never been comfortable with the present system of so-called managed floating. When the D-mark appreciates, the European currencies linked to it must also appreciate which creates political problems. I am afraid that if we get a few more crises of the kind we have just experienced, we could well slip back into a world of completely fixed exchange rates. And, short of tight coordination of the monetary and fiscal policies of the world's leading countries, there is absolutely no way a system of fixed rates can work.

BACK TO THE GAMING TABLE

(By Milton Friedman)

The Federal Reserve Board and the Treasury Department recently—though, to their credit, reluctantly—announced that they intend to gamble on a large scale with your money and mine. Of course, that is not how the official announcement phrased it. It spoke of "intervention" to support the dollar and prevent "disorderly" markets. But a spade is a spade even if it is called an unearthing implement. And gambling is gambling even if it is called "intervention."

How does the Fed or the Treasury intervene to "support" the dollar? One example is the Fed's borrowing marks from the German Bundesbank under a so-called "swap" agreement and using them to buy dollars. The purchase of dollars tends to raise the price of dollars in terms of marks—but that is only half the story. Sooner or later, the Fed has to buy back marks (i.e., sell dollars) to repay the loan, which tends to lower the price of dollars. If the Fed gets more marks per dollar when it sells dollars than it paid to buy the dollars, it will end up making money; if it gets fewer marks per dollar, it will end up losing money.* The Fed is therefore gambling on the price at which it will be able to buy back the marks.

THE TEST OF SUCCESS

The announced purpose of the official gambling is to keep private speculators from driving the price of the dollar below the level justified by fundamental economic factors—to offset, as the Fed and Treasury would put it, "destabilizing" speculation. How can we judge whether the gamble succeeds? In general, there is a simple test: whether it makes or loses money. If recent downward pressure on the dollar was a speculative flurry, then the dollar will rebound, and the Fed will need fewer dollars to buy back the marks to repay its borrowings than it acquired when it sold the marks. The difference will be pure profit. Conversely, if the dollar does not rebound, the Fed will lose money and its operations will have simply postponed briefly a necessary change in exchange rates.

Which outcome is more likely? Of course, anything can happen in a particular case, but the verdict of experience since 1971 when the dollar was first cut loose from gold is unambiguous about average performance. Here is the record of gains or losses on foreign exchange transactions, as reported by the Fed:

	Million loss
1971	$8.1
1972	51.9
1973	47.4
1974	34.0
1975	241.8
1976	25.1
1977	146.0

A total of more than $550 million of the taxpayers' money lost on the international-currency gaming tables. Hardly a record that would justify anteing up to finance another go.

This experience is not unique. The cumulated exchange losses of the central banks of Britain, Germany and Japan over this period have never, so far as I know, been totaled, but there is little doubt that they are a multiple of U.S. losses. And is that surprising? What else would you expect from gambling with other people's money?

During another period of disturbed foreign exchanges, I wrote in this space (April 23, 1973), "The swap agreements [between the Fed and foreign central banks] serve no useful function and Congress should terminate the Fed's authority to enter into them. Their only role is to enable the U.S. Government to 'intervene' in order to affect exchange rates. We and the world would be better off if exchange rates were determined in a free market. And whatever other countries do, the U.S., as the source of the key international money, has no business engaging in currency manipulation to affect exchange rates."

THE REAL TASK

Five years of additional experience of throwing good money after bad only reinforces that conclusion. The Fed's task is to provide stable money at home. The dollar has declined in value against the German mark, the Swiss franc and the Japanese ven because the Fed—with a strong assist from Congress and the Administration—has failed in that task. If we succeeded in curbing inflation, the exchange rates would take care of themselves. If we continue to fail, it only makes matters worse to use currency intervention to paper over the consequences of domestic inflation.

SPECULATION AND SPECULATION

(By Milton Friedman)

During the recent international monetary crisis, governments in all lands blamed currency speculators for their troubles. At the same time, the governments themselves engaged in currency speculation—though of course they called it by a different and more dignified name. They engaged in "intervention."

The private speculation that the governments deplored was socially useful and had desirable effects. The official speculation in which the governments engaged was socially harmful and had undesirable effects.

USEFUL

Private speculation forced governments to face up to reality, to recognize that the exchange rates they were seeking to peg were artificial. It forced Japan and Germany in particular to recognize that their currencies were undervalued. It forced them and other countries to give the market a greater role have conquered in any event, sooner or later. Speculation made it sooner rather than later and thereby reduced the harm done by the artificial exchange rates.

Official speculation was very different. Its aim was to preserve artificial exchange rates, to postpone the recognition of reality. Had it succeeded, it would have permitted economic distortions to cumulate to still more harmful proportions.

Private speculators are far from omniscient. This time, they happened to be right and so made handsome profits. Next time, they may be wrong and suffer grievous losses. But in either case, they speculate at their own risk with their own money.

Official speculators, too, are far from omniscient. This time, they were wrong; next time, they may be right. But there is an important reason why they are more likely to be wrong than right. They speculate not with their own money but with the taxpayers' money. As a result, there is little pressure on them to control their natural impulse to resist change.

Regrettably, the U.S. participated in the

---

* In practice, the swap agreements provide for joint gambling by the Fed and the foreign central bank, the gains and losses being split between the two.

official speculation. Prior to the so-called U.S. devaluation on Feb. 12, 1973, the Federal Reserve sold marks that it held and marks that it borrowed from Germany in a vain attempt to hold down the dollar price of the mark. It sold the marks for about $320 million. After the devaluation, it would have cost more than $350 million to buy back the same number of marks. The result? A negligible postponement of mark appreciation, at a cost of at least $30 million to the U.S. taxpayer and a worsening of the balance of payments, since that $30 million also had to be financed. The U.S. taxpayer got off cheaply. Official German and Japanese speculation probably cost German and Japanese taxpayers more than $1 billion—to equally little avail.

But we have not always gotten off so cheaply. And we may not do so in the future. Official U.S. speculation before the closing of the gold window on Aug. 15, 1971, cost the American taxpayer a much larger sum. And Secretary of the Treasury George Shultz, at the end of the recent European negotiations, announced that although the U.S. was not "committed" to intervening to support the new price of the dollar, it would do so at its discretion from time to time.

As U.S. citizens, we cannot and should not prevent German and Japanese governmental officials from speculating with their taxpayers' money. That is a task for German and Japanese citizens. But we can and should restrain our own officials.

HARMFUL

It would be nice if we could simply forbid U.S. Goverment purchase of foreign currencies. But that is not practicable. Foreign currencies must be purchased to pay government expenses abroad. But Congress could at least forbid the purchase or sale of foreign currencies to influence exchange rates.

Moreover, the Federal Reserve speculates via so-called swap agreements under which we agree with other countries to lend them dollars on demand for a short period and they agree to lend us their currency. These swap agreements now total something like $12 billion.

The swap agreements serve no useful function and Congress should terminate the Fed's authority to enter into them. Their only role is to enable the U.S. Government to "intervene" in order to affect exchange rates. We and the world would be better off if exchange rates were determined in a free market. And whatever other countries do, the U.S., as the source of the key international money, has no business engaging in currency manipulation to affect exchange rates.

THE FLOATING—NOT SINKING—DOLLAR

Our dollar has been weak in foreign exchange markets relative to other currencies mainly because the U.S. economy has been *strong*. The current episode of our falling exchange rate presents a sharp contrast to the recent experience of the United Kingdom and to our own experience earlier in the decade. It is not the result of above-average inflation rates or poor economic performance.

In 1977, the United States was the only capitalistic industrial country that met its target for economic growth; in the process, we generated higher demands for all types of goods, naturally including imports. And the rise in U.S. imports bolstered the sagging growth curve of other economies—perhaps even saving them from renewed recession. With our imports growing and our exports stagnating because of the weak economies of our trading partners, a lot of dollars were pumped into the rest of the world. Although foreign investors have a strong appetite for dollar securities, it isn't unlimited. With a U.S. trade deficit of $30 billion, it was hardly surprising to find an excess supply of dollars on world financial markets and a resulting adjustment of exchange rates, which lowered the value of the dollar relative to the average of other major currencies by 4½ percent in 1977.

The developments during 1977 were precisely the reverse of what happened during 1975. At that time, the U.S. economy was the sickest in the world, and we were spreading our acute recessionary disease abroad with an 11 percent decline in our real imports. Because we ran a substantial trade surplus, dollars were scarce throughout the world, producing an average rise of the dollar in foreign exchange markets by about 8 percent. That increase in the value of the dollar evidently created an overvaluation, making imports excessively attractive to us and our exports unduly expensive to others. When trade flows finally adjusted to this change in exchange rates after a year or two, that swelled our trade deficit of 1977.

In short, exchange rates have been responding to real phenomena: a U.S. trade deficit that is unsustainably high and surpluses in Germany and Japan that are unreasonably large. While exchange markets can get caught up in a speculative fever and can overshoot, there is no evidence to date that they have gone haywire, or even that they have necessarily completed the appropriate adjustment. Our exchange rate is still a few percentage points higher than it was three years ago, compared to the average of other major currencies; nobody can say with any conviction that the dollar is now undervalued (or still overvalued). To set a target for the exchange rate and try to maintain it would be like freezing the thermometer.

There are, to be sure, some unwelcome consequences of the decline in our exchange rate. First and foremost are higher prices of imports from Japan and Germany, and the additional inflationary effects on prices of U.S.-made products that compete with those imported goods. The drop in the dollar's exchange rate during 1977 is likely to add an extra half a point to our price level over the next year or two. Second, the instability of foreign-exchange values creates anxiety and uncertainty in international capital markets. When exchange markets are gyrating, foreign investors holding dollar bonds and stocks cannot feel secure about the ultimate purchasing power of those assets over the goods they buy. In a period of sharply fluctuating exchange rates, people may make very different bets on the future course of those rates, leading to large and destabilizing portfolio shifts. The results are regrettably disruptive for international and even domestic investors, although they do not add up to a crisis by any stretch of the imagination.

Not all of the consequences are undesirable. American industries that export heavily and those that compete strongly with German and Japanese imports will generate more jobs and earn more profits as a result of the movement of exchange rates. According to one statistical estimate, the decline in the exchange rate of the dollar during 1977 should ultimately reduce our trade deficit by about $7 billion below what it would otherwise be.

To the countries with rising exchange rates, the costs and benefits are reversed. They will get the boon of lower inflation from cheaper imports and the bane of lower export demand. I must say that some of the complaints from abroad do not make sense. For example, many comments from Germany fail to recognize the anti-inflationary benefits to them of lower import prices—even though the Germans stress their eagerness to control inflation. Some foreigners clearly want us to feel embarrassed by the drop in the dollar's exchange rate.

Others argue invalidly that U.S. oil imports have been the major source of the weakness. In fact, oil imports accounted for only about a third of the increase of total U.S. imports during 1977—in large measure an inevitable consequence of our economic growth. Moreover, the U.S. oil imports contribute little to the excess supply of dollars since the OPEC countries have been and remain very willing holders of dollar assets. To be sure, the United States needs an energy bill, and I hope the Senate conferees have made a New Year's resolution to achieve a prompt compromise on what is shaping up as a constructive long-run program. But no conceivable energy bill can lower our oil imports significantly for some years to come.

The plain fact is that some countries have been relying on rising exports to lead them back to prosperity, rather than taking the steps needed to promote growth at home. Their strategy can succeed only if the United States is willing to accept huge trade deficits and to go along with an artificial pegging of exchange rates to sustain that. It is clear why those countries don't enjoy the adjustment of exchange rates, but it should be equally clear why we cannot let them have their way.

Actually, U.S. policies in recent months have had the healthy effect of inducing some of our trading partners to reexamine their economic policies. Japan has responded in an encouraging way by adopting a more stimulative fiscal policy and by starting to liberalize its restrictive policies on imports. Other countries have to be mature enough to face their responsibilities as well.

Meanwhile, the United States must be alert to the causes and consequences of its trade deficit and its falling exchange rate. Our fundamental competitive position will improve over the years ahead if we can strengthen productivity, spur capital formation, slow the wage-price spiral, and economize on imported energy. But we must continue to refuse to freeze the thermometer. Our government should be buying dollars in exchange markets only when the markets are truly disorderly. And U.S. monetary policies ought to be focused on unemployment rates, inflation rates and investment rates—not exchange rates. We surely don't want to bring back the bad old days of 1975 with a strong exchange rate and a weak economy.

CHINA'S OIL POTENTIAL

Mr. KENNEDY. Mr. President, it is clearly in the interests of the United States to see China's petroleum potential, whatever it may be, developed to the fullest. Every additional barrel that can be found puts off a little further the day when world demand exceeds OPEC's production capacity. In the short run there would be a direct benefit for American and European consumers if Chinese oil displaces Saudi Arabian oil in Japanese markets.

On my recent trip to China I came to the conclusion that China's oil potential may offer an important opportunity for American trade. American petroleum technology would be an extremely valuable commodity if China wishes to quickly develop its oil potential. It is possible that both nations could realize enormous benefits from such trade.

In a recent article in Forbes (Feb. 6, 1978), James Cook discusses China's oil potential and the possible impact on U.S. trade. I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OIL FOR THE LAMPS OF TOKYO?

(By James Cook)

In the thirties a nearly forgotten novelist, Alice Tisdale Hobart, wrote a bestseller called

Oil for the Lamps of China about an American kerosene salesman who brought light, if not enlightenment, to the downtrodden Chinese. But China imports oil no more. These days, the People's Republic of China, alone among the countries on the Asian mainland, is self-sufficient in oil, possessed of oil prospectively so abundant that the more exuberant of the West's new China hands sometimes talk of China these days as another Saudi Arabia.

Whether it is, probably no one knows, not even the Chinese themselves, but last month the People's Republic took some important steps toward finding out. In early January, a delegation of 16 top Chinese oil experts, including Sun Ching-wen, president of the Petroleum Corp. of the People's Republic of China, arrived at New York's Kennedy Airport at the invitation of Secretary of Energy James R. Schlesinger for a three-week tour of the U.S. oil industry. What Schlesinger wanted to show them was not simply U.S. production, refining and marketing facilities, but also the equipment manufacturing facilities that produce the rigs, pumps, meters and drilling equipment that make the U.S. oil industry the most proficient in the world. "The Chinese are seeking ways to adapt U.S. equipment and technology to the development of Chinese oil reserves," says an Energy Department official. "This isn't a buying expedition." And it's not—yet. But as Christopher H. Phillips, president of the National Council for U.S.-China Trade, points out: "They're not sending this delegation just to sightsee. I think they're seriously interested in American oil equipment."

Meanwhile, last month in Tokyo and Peking, negotiators were working out the final details of a precedent-setting eight-year agreement to sell Chinese oil to Japan. Japan has been importing oil somewhat erratically from China since 1972, and the new agreement would formalize an import pattern the Chinese have been trying to firm up ever since 1974. It will set the specified quantities for delivery within specified time periods, so essential in a centrally planned society like China's, and set the groundwork for a significant expansion of China's already substantial oil production.

By oil industry standards, the deal is nothing spectacular: 140,000 barrels a day in 1978, rising in contractual quantities to as much as 300,000 by 1982—about as much as Dubai now exports. But that appears to be the minimum. By the end of the eight-year period, Chinese Vice Premier Li Hsien-Nien recently announced, shipments could reach as much as 600,000 barrels a day.

Just how much oil the Japanese decide to take will depend upon what accommodation Japan and China make to the peculiar nature of Chinese oil. Unlike the benchmark Arabian crude Japan imports from the Middle East, Chinese oil has an unusually high (about 30%) paraffin content and yields an unusually high proportion of low-value residual oil—70% vs. 44% for Arabian light. Instead of being dewaxed and refined, the bulk of the 120,000 barrels a day the Japanese imported last year from China was burned in power plant boilers.

Given the demand for electric power, there's a limit to how much Japan can burn directly, however, and so the Japanese Ministry of International Trade & Industry has been trying to persuade the Japanese oil companies to build the refinery capacity to dewax the Chinese crude so it can move into various other petroleum markets as well. Industry is resisting. Oil is abundant these days and prices already sky high, so the cost has so far seemed prohibitive. "At the moment," says an official of one of Japan's great trading companies, "it is just not feasible to construct such facilities unless the Chinese promise to supply the crude at a cheaper price—$1 to $2 a barrel less, say—and I can't see that happening." The alternative is for the government to subsidize the construction of such dewaxing facilities, and MITI has asked Japan's finance ministry to fund the construction of a $103-million, 30,000-barrel-a-day refinery, so far without success. But this could change. The pressure is on Japan to reduce its exports to American and European markets. By trading more with China, Japan could simultaneously reduce both its need for exports to the West and its dependence on Arab oil. In today's strange, interdependent world, the net result of all this could be to reduce the pressure on the dollar.

"In exchange for the oil," Forbes' Lawrence Minard cabled from Tokyo last month, "the Japanese hope to sell to China directly the technology they need in steel, petrochemicals, fertilizer, ports and harbors and power generation, and make up the rest with drilling rigs, refinery equipment and computers provided through Japanese trading companies from U.S. sources." Overall, the prospects are so seductive that, for the moment at least, Japan is no longer pressing its dispute with China over areas offshore in the China Sea.

For the Chinese, oil has emerged as a central element in its long-term dreams of development. In the 17 months since Mao's death, China's Chairman Hua Kuofeng has set as a major objective China's reaching the level of the advanced industrial countries by the year 2000. To do that, in a country not much more advanced than Europe in the 18th century, he is going to need massive amounts of Western technology. China can't hope to pay for that technology with the income from exporting rugs, pigs' bristles, pork, varnish or even feathers. The most substantial foreign-exchange earner is oil. "Oil is the major export they have to earn the foreign exchange they need to accomplish these other things," says Christopher Phillips. "Their leadership appears to have made a decision to give oil development a very high priority."

Which is why the 16-man delegation spent a good part of its time in the U.S. touring oil equipment producers like Dresser Industries, Hughes Tool Co., National Supply Co., Smith International and Texas Instruments. The new Japanese agreement will bring China around $6.5 billion in oil revenue this year, with the total progressively rising to at least $15 billion by the early Eighties. While the money for the oil will come from Japan, much of it will eventually find its way to the U.S. for buying oil equipment and technology. So far the Chinese have bought only about $150 million worth of U.S. oil equipment over the past five years, but the ultimate market could be in the billions—exploitation of oil resources doesn't come cheap, as the Mexicans are learning. Thus again, in an indirect way Japanese pressure on the dollar could be greatly eased.

At this point, Chinese oil production is thought to run around 1.8 million barrels a day, in line more or less with second-rank producers like Abu Dhabi or Indonesia, and in contrast with the U.S.' 8 million barrels a day or Saudi Arabia's 9 million. But China has barely begun as an oil producer. Its "credible" reserve estimates, as Randall Hardy calls them, range from about 20 billion barels (two-thirds of the U.S.) to about 100 billion barrel (one-quarter those of Saudi Arabia's). "The foremost fact about Chinese oil," says Hardy, a Department of Energy official who has made himself expert in Chinese oil, "is that we don't know much that we're talking about. The Chinese haven't published any economic statistics since 1960. They'll say, 'We produced 3.5 times what we did in 1965,' which is fine if you know what they actually did then."

But even these minimum reserve figures would suggest that China has the potential to expand its present production dramatically. Chairman Hua announced not long ago that China intended to develop "ten more fields as big as Taching" by the year 2000, and Taching—named "Great Celebration" in honor of the revolution's tenth anniversary—is far and away China's biggest producing field, with an output some experts estimate at upwards of 700,000 barrels a day.

Many outsiders, including those in the U.S. Central Intelligence Agency and the Department of Energy, are skeptical of China's ability to come even close to realizing such ambitions, but Selig S. Harrison, who has just written an exhaustive study of Chinese oil, *China, Oil & Asia*, for the Carnegie Endowment for International Peace, thinks they have a "better than 50-50 chance." According to Harrison, "Peking has boldly embarked on a crash program to push this level upwards as rapidly as it can and has correspondingly started to downgrade the relative emphasis given to its investment in other spheres. . . . The unannounced Chinese target is 400 million tons (3 billion barrels) by 1990." And 3 billion barrels annually is upwards of 8 million barrels a day—about what the U.S. produces these days from its declining reserves and close to what Saudi Arabia currently produces.

In the past, China's oil development has been slowed by political considerations. The Gang of Four, Petroleum Minister Kang Shih-en charged last year, purposefully put "politics in opposition to professional work and being red in opposition to being expert." But the Hua regime has instead begun directing China's economy toward rapid development. As a party newspaper put it recently: "The struggle for production comes before the class struggle. The class struggle should be made to promote the development of the national economy."

Most of China's oil production currently comes from a group of fields in the Northeast—Taking, Shengli and Taching—which is perilously close to the Soviet border. But most of its future production will have to come from the remote provinces of the West where production and transportation costs are higher, or, more likely, from the more accessible, more easily exploited, but still largely unexplored offshore areas in the Po Hai Gulf and in the Yellow and China Seas. Which explains China's particular interest in U.S. technology these days: Nobody is more experienced than the Americans in offshore development.

Western oilmen like to dream of moving in under management contracts as they have all over the rest of the world, and helping the Chinese realize their oil potential. But nobody seriously believes that is likely to happen. The new regime may be more pragmatic and less seclusive than the old, but it is unlikely to seriously dilute its commitment to the Maoist principle of self-reliance. "Anything that involves foreign equity, product offtake or a share of the profits on a continuing basis," says Randall Hardy, "would be considered exploitative and inconsistent with the emphasis on self-reliance. But that doesn't preclude technical assistance. They have a fair number of petroequipment technicians—European—not only selling equipment directly but going over there and giving assistance on how it's used."

"The Chinese are very practical, very pragmatic," says Christopher Phillips, who suspects that the Chinese are more flexible than Hardy believes. "Isn't there some way they could agree to what amounts to foreign participation without actually calling it that? I'm not sure this will happen, but I have a hunch things may be moving in that direction."

SRI LANKA INDEPENDENCE DAY

Mr. MATHIAS. Mr. President, Sri Lanka celebrated its Independence and National Day on February 4, the date on which the country achieved independence from Great Britain in 1948.

In 30 years of independence, Sri Lanka has regularly reaffirmed its deep-rooted

faith in the democratic process. The promises and guarantees of its Constitution are carried out in practice. Freedom of the press has never been suspended, and Buddhists, Hindus, Christians, and Moslems live together and worship in harmony.

Sri Lanka stands out among developing nations in its level of social achievement. Life expectancy is 60 years, literacy is 85 percent (95 percent among younger people), education is free through the university level, and health care is provided to all. Moreover, in the last 30 years, the income distribution has become more equitable.

The Overseas Development Council uses a Physical Quality of Life Index (PQLI) to measure a country's success in meeting basic human needs for the majority of its population. Despite its annual per capita GNP of only $130 in 1977, Sri Lanka received an 83 point ranking out of 100 on the PQLI. This rating was higher than that of many countries with considerably higher per capita, GNP's, some as high as $1,091. Sri Lanka has every reason to be proud of these statistics.

This year's Independence and National Day celebration was a particularly special occasion since the Prime Minister, Mr. J. R. Jayawardene, assumed office as the country's first Executive President under the new Constitution. Mr. Jayawardene has been committed for the last 10 years to the establishment of a strong Executive elected directly by the people, as opposed to the previous parliamentary form of government, where the Executive was chosen from among the members of the majority party in the legislature. In the seventh general election since independence, Mr. J. R. Jayawardene was returned to power with an unprecedented majority of 140 seats in an assembly of 168 seats.

When Mr. Jayawardene assumed the presidency of Sri Lanka, one of the fundamental principles of our constitutional form of government—the separation of power between the executive, the legislature, and the judiciary—became one of the basic tenets and guiding principles of the Constitution of Sri Lanka.

I commend the Sri Lankans for their commitment to creating a free and just society, and I offer my congratulations to the people of Sri Lanka on the occasion of the 30th anniversary of their independence.

GENOCIDE CONVENTION SHOULD BE RATIFIED

Mr. PROXMIRE. Mr. President, I would like to address an issue about which I feel very strongly. It concerns a spurious argument which has often been used against the passage of the Genocide Convention. The convention, as every Senator knows, would condemn the destruction of an ethnic, national, racial, or religious group as an international crime.

The treaty was first submitted in 1949, and one of the arguments which its present day opponents use against it goes roughly as follows. They argue that the Senate would have already passed the treaty if it were in the best interests of the United States.

To make such a statement is a clear abnegation of our responsibility as Senators who are now serving in this body. It is not our duty to perpetuate the procrastination of the past. To the contrary, it is our duty to correct past oversights. And one of the most serious oversights in the history of this body has been its inaction on the Genocide Convention.

It is right for us to pay heed to the lessons of history—there is much in our past which can light the way to a better future. But the past should not justify the future. My feelings would be no different if the treaty were 50 or even 100 years old for they are based on logic and reason, not on the passage of time.

Many of the original reservations to the treaty were sound ones, and deserved the careful consideration of the Senate. America should always be careful about entering into a treaty. But thorough hearings have been held, and it is now time for each Senator to weigh the merits of the convention in his own conscience. We can all look back over the long course of history and find tragic failings in the action of men in all civilizations. I only hope that our failings with regard to the Genocide Convention will not be realized when it is too late. I call upon the Senate to pass the Genocide Convention as soon as possible.

SEX AND VIOLENCE ON TV

Mr. THURMOND. Mr. President, last Thursday, February 2, 1978, the Woodruff News of Woodruff, S.C., carried an editorial which I think should be brought to the attention of the Senate. In it, the Congress is encouraged to find a quick solution to the problem of television violence, even if the answer lies in an amendment to the Constitution. I agree with the thrust of this fine editorial, and intend to push for further action on my bill—S. 1178—to amend the Communications Act of 1934 to prohibit the broadcasting of television sex and violence.

Mr. President, this is an important issue, and one on which I receive steady mail from all over the country. Every citizen who writes to me has expressed support of S. 1178, and is most firmly opposed to the type of programing that this editorial addresses.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Woodruff (S.C.) News, Feb. 2, 1978]

95th & TV

One of the areas in which Congress has consistently failed in its obligation to the public is in the field of television violence—used to attract audiences to sell products.

An infuriated husband kills six children in Illinois in the most brutal fashion. An intruder slips into a girls' dormitory in Florida and strangles and beats five sorority sisters, two fatally. It now happens frequently in America—just like the violence on commercial television.

Congress does next to nothing—the committees which regulate the industry are partly composed of members who own interests in broadcast stations. In addition, the television networks are so powerful few politicians dare attack them.

The networks claim freedom equal to that of the press when assailed—but there's quite a difference between the print media and government-licensed monopolistic television station operations. Newspapers report news. Television creates fictional crime shows, in color and often glamorous, to attract viewers.

Congress, of course, holds hearings from time to time and some members try to do something. But calling witnesses from both sides usually leads to confusion and inaction. Anyone with fourth-grade common sense knows television sells crime. Shock, violence and brutality attract. People congregate at a tragic accident, etc. This human trait is exploited by the networks to sell products, and reap billions in profits, which continue to increase.

The 95th, perhaps with the lead of President Carter, should direct the FCC to minimize crime on television, and delegate to it the authority to do so. If this requires a constitutional amendment, one suspects three-fourths of the states would ratify it.

PRELIMINARY NOTIFICATION OF PROPOSED ARMS SALES

Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million, or in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon receipt of such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

Pursuant to an informal understanding, the Department of Defense has agreed to provide the committee with a preliminary notification 20 days before transmittal of the official notification. The official notification will be printed in the RECORD in accordance with previous practice.

I wish to inform Members of the Senate that two such notifications were received on February 6, 1978.

Interested Senators may inquire as to the details of these preliminary notifications at the offices of the Committee on Foreign Relations, room S–116 in the Capitol.

Mr. President, I ask unanimous consent that the two notifications be printed in the RECORD.

There being no objection, the notifications were ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C.,
February 6, 1978.

In reply refer to: I–12392/77ct.

Mr. WILLIAM RICHARDSON,
Professional Staff Member, Subcommittee on Foreign Assistance, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. RICHARDSON: My letter dated 18 February 1976 indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a NATO country tentatively estimated to cost in excess of $25 million.

Sincerely,

ERICH F. VON MARBOD,
Acting Director, Defense Security Assistance Agency.

Attachment.

WASHINGTON, D.C.,
February 6, 1978.

In reply refer to: I-13467/77ct.

Mr. WILLIAM RICHARDSON,
Professional Staff Member, Subcommittee on Foreign Assistance, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. RICHARDSON: My letter dated 18 February 1976 indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a NATO country for major defense equipment tentatively estimated to cost in excess of $7 million.

Sincerely,

ERICH F. VON MARBOD,
Acting Director, Defense Security Assistance Agency.

THE PEOPLE'S REPUBLIC OF CHINA, JAPAN, AND THE UNITED STATES—A STATEMENT BY SENATOR EDWARD M. KENNEDY

Mr. CRANSTON. Mr. President, yesterday I introduced in the RECORD the perceptive, firsthand statement of Senator KENNEDY upon his departure from a 2-week visit to the People's Republic of China.

After Senator KENNEDY completed his trip to the PRC, he spent a week in Japan studying, among other things, the relationship of Japan to China and the relationship of Japan to the United States. Senator KENNEDY also visited Hiroshima, a visit which reinforced his firm commitment to the necessity of nuclear arms control.

When Senator KENNEDY returned to Massachusetts, he made a report on his trip to his constituents. I think this timely and knowledgeable report will be of value to us all. I also should add that the trip by Senator KENNEDY was entirely at his own expense, but all of us are the beneficiaries of his experience.

Mr. President, I ask unanimous consent that the statement of Senator EDWARD M. KENNEDY on "Returning from China and Japan," dated January 17, 1978, be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD as follows:

STATEMENT OF SENATOR EDWARD M. KENNEDY ON RETURNING FROM CHINA AND JAPAN

I am pleased to be back in Massachusetts after two weeks in China and one week in Japan.

This is a historic time for the future of Asia. For the first time since Pearl Harbor the United States enjoys a sustained peace in that vital region. China and Japan now have friendly relations for the first time in this century. The United States now has friendly relations with both of these nations. We must do all we can to build on these important and encouraging developments, in order to assure the future peace and prosperity of both Asia and the world.

I return to Massachusetts more committed than ever to helping move forward the process of normalizing relations between the United States and the People's Republic of China. And many hours of conversation with China's leaders, including an hour and a half discussion with Vice Premier Teng Hsiao-Ping convinced me of their personal desire for early normalization of relations with the United States.

No one should forget the fundamental transformation in U.S./China relations in recent years, from confrontation and mutual isolation in the 1950's and 1960's to limited cooperation and parallel action today. A historic and strategic opportunity is open for us to expand our cooperation, and to make it work to the benefit of international peace and progress.

The key obstacle to normalization of relations remains the future of the 16 million people on Taiwan. I did not expect, and cannot report, progress in resolving that issue. But I believe the Chinese have a better understanding of the American view that Taiwan should enjoy a peaceful and prosperous future. I also believe that we can take effective steps to create a more positive political climate in which normalization can take place. These steps include:

Exchanges of visits and meetings of leaders.

Continued drawdown of U.S. Military Forces and of the official U.S. presence in Taiwan; and

Expansion of trade and cooperation between our two societies.

While in China, I suggested that the U.S. supply advance oil technology in exchange for a share of Chinese oil production.

I also asked the Chinese leaders to consider a number of requests by their citizens to visit their relatives in the United States, including three families in Massachusetts.

And I asked them to consider six proposals by the National Academy of Sciences for new cooperative efforts in the field of Science and Technology.

I am hopeful that the Chinese will give favorable consideration to these specific proposals. By moving forward on these areas and on the basic political issues, I am hopeful that we can develop full and constructive relations with a government of 900 million people, a government that has been established for almost three decades on the Mainland of China, and that is becoming an increasingly powerful force in Asia and the world.

In Japan, I had the chance to see first hand the strength and importance of our bilateral relationship. In meetings in three Japanese cities—with students and faculty, labor and business leaders—it was apparent that our two industrialized democracies share common challenges, common opportunities, and a common future. In meetings with government leaders, including Prime Minister Fukula and Trade Minister Ushiba, it was clear that our alliance is steadfast and that we are committed to working more effectively together to overcome the economic crisis we now face.

My family and I also had the moving experience of visiting Hiroshima, and paying tribute to a city that stands as a constant reminder of the horror of nuclear devastation. We drew hope, as well, from Hiroshima's magnificent recovery over the past three decades, both material and spiritual. I spoke there about the goal for nuclear arms control, and the need for wise Japanese and American policies to ensure that nuclear energy will be used only for peaceful purposes.

I also had the opportunity to be in Tokyo while Ambassador Strauss and Minister Ushiba were completing the current phase of trade negotiations between our two countries. I spoke in that city of the concern of Massachusetts workers for their jobs and of the threat that the massive Japanese trade surplus poses to healthy relations between our two countries.

I believe that the Japanese increasingly recognize the danger of this threat, and I am hopeful that the efforts they are undertaking will be effective in reducing their current excessive surplus and in defusing the growing protectionist pressures that exist in both our nations. As I warned in Tokyo, it is extremely unlikely that Congress will continue to support an open trade policy by America, when a variety of restrictive trade policies continues to be practiced by Japan.

The interests of Massachusetts have played an important role in this trip in both China and Japan. I discussed technology cooperation with the Chinese, including computer exports of potential benefit to the Commonwealth. Japanese business leaders expressed to me their interest in considering future investment in Massachusetts. I intend to pursue these openings in the months ahead. And in Japan, I also had the opportunity to see the strong ties between Boston and our sister city, Kyoto, whose Mayor told me of the high importance he attaches to our continuing relationship.

I was also pleased to be able to visit Johnny Foo and his family in Shanghai. Mr. Foo hopes to visit his parents in Stoneham. I have just visited his parents' home this morning, and I told them that the Chinese are now considering my request that their son be allowed to visit them.

And, of course, Joan and I were very pleased to obtain agreement from the Peking Philharmonic Orchestra to send five or six musicians to join the Boston Symphony Orchestra next summer in Tanglewood. This is an important step forward in the field of musical cooperation between the United States and the People's Republic. I join with Maestro Seiji Ozawa in expressing satisfaction that this step should take place between Peking and Boston.

Three times in the past generation, Americans have sent their sons to fight in wars in Asia. Our highest national goal must be to work for peace in Asia and in other areas of the world, so that we may prevent such sacrifices and destruction in the future, not only by Americans, but by all peoples everywhere. Working together with both China and Japan, I am confident that our nation can achieve this goal.

THE COST OF PEACE

Mr. JACKSON. Mr. President, at the January 14 meeting of the United Jewish Appeal West Coast Conference in San Diego, Leonard Strelitz, general chairman of the conference, preceded me on the platform. He made a stirring and informative statement on the significance of the UJA campaign which, I believe, will be of special interest to my colleagues just at this time.

I ask unanimous consent that his statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE COST OF PEACE: AN OPPORTUNITY TO GIVE

Mr. Chairman, Irwin Field, Senator Jackson, Honored Guests: No longer can we say that space and distance separate the West Coast from our National Campaign. The world has changed the course of Jewish life, and Jewish life has changed the course of the UJA.

So tonight, it is my pleasure to announce that UJA is building a new leadership team

on the West Coast—picking the best elements in the community to accelerate our campaign. Instead of one National Chairman for the Region, there will be three:

1. From Los Angeles, young in age, but old in experience, Irwin Field.

2. From San Francisco, my friend and that community's past Campaign Chairman, Richard Goldman.

3. From here in San Diego, a dynamic campaigner, which helps explain this community's 90 percent campaign increase, Herbert Solomon. And, I am asking Herb to direct a long-range planning committee for the West Coast.

SAPIR AWARD

Now, the UJA wishes to recognize how concerted leadership can make the difference, by honoring San Diego with the Annual UJA Pinhas Sapir Community Achievement Award.

The Sapir Award is given for excellence in campaigning; professional and lay leadership and community development.

For the 1977 Campaign, San Diego went from $1.8 million to $2.3 million. And this year, they are running almost 100 percent ahead of last year, and should reach $4 million.

I would like to call up last year's Campaign Chairman, now Federation President, Arthur Levinson; the new Campaign Chairman, Ernest Rady, and San Diego's Executive, Don Gartner.

Friends, not since man walked on the moon has the world been so captivated by an event as bold and important as the meeting of Begin and Sadat in Jerusalem.

It is hard to believe that our universe changed so drastically only 55 days ago. For with Sadat's 49-minute trip from Cairo to Tel Aviv, a new era of opportunity opened.

Now, we don't know if the process will bring peace . . . or frustration . . . or disappointment. But something profound has occurred.

"You see what we have done together. Your strength has helped bring us to this day. We've avoided another war," Menachem Begin told me in his home shortly after Sadat left Jerusalem.

And, tired but exhilarated, he looked at me and explained: "We see the light at the end of the tunnel!"

Yes, he was pleading with us, with our communities, to give him the strength to successfully bring his effort to a conclusion.

Because—you achieve peace from strength. That's why Sadat came to Jerusalem in the first place: Because he knows that Israel is strong. And we must keep Israel strong!

So while we continue to understand this unprecedented event, remember: there will be frequent swings from hope to disappointment. But there is a new reality. There is a chance for peace.

Sure, it is easy to give in war, but are we sophisticated enough, are we committed enough, to understand this new dimension?

The stakes are great. We're playing for "table stakes," if you know what I mean: everything is on the table. Israel has all to lose; the Egyptians little.

So it is this opportunity for increased giving for peace, and not war, that now confronts us. It is the credibility of what we do that counts: to accelerate our commitment and do more.

Because—the road ahead will be difficult. Grave questions of principle, as well as detail, still confront Israel. And that means leading from strength—keeping the people of Israel strong, providing them with a quality of life, and acting with purpose and resolve.

Because—the price paid to pursue peace is still painfully high. The people of Israel need the ability to product more, to learn more, to export more, to become more self-reliant, and to find peace within Israel.

After 30 years, the people of Israel:

Still spend a third of their wealth on security,

Still battle galloping inflation,

Still cope with the costs of modern weapons,

And still consider immigration their No. 1 priority, even when they are troubled.

But, my friends, four wars in one generation has left us with a backlog of unmet social needs.

We did a magnificent job in bringing over a million Jews to freedom—especially in the rescue of 400,000 Jews from concentration camps, and another 800,000 who fled Arab massacres.

We housed them, and cared for them the best we could. And today, without them, there would be no Israel. Their children guard Israel's borders, fly F–15s, and plant for tomorrow.

But some of them can not lift themselves out of the darkness of the past. The scars of oppression are too great. And, today, they are a problem we can no longer ignore.

What are we talking about? Not war, not security, but children living 3 and 4 and 5 to a room. It's shameful!

Friends, our gift to the people of Israel for their 30th anniversary must be a social upbuilding as daring and as imaginative as the Sadat-Begin talks.

There is no reason why every Jewish child in Israel cannot have a full education as a birthright!

There is no reason why each and every Jew seeking refuge—wherever anti-semitism rears its ugly head—cannot be welcomed with opportunity.

And there is no reason why after 30 years, we tolerate the fact that 45,000 Jewish families live in slums.

My friends, if we do accelerate our commitments for peace, we will see the light at the end of the tunnel—and we will win this game of table-stakes.

This is what I have been telling leadership for the last 55 days: We have an opportunity, if we lead from strength.

Throughout the nation, this is shaping up as a robust campaign: $150 million has already been pledged for 1978—16 percent ahead of 1977.

It is a measure of the American Jewish community's concern. So let us demonstrate that we can increase our giving for peace, remembering why Sadat came to Jerusalem: because Israel is strong, and we must keep her that way.

The world is watching us. The Arabs question our endurance, and Washington is monitoring our moves.

So let us send a powerful message for this Campaign because:

Our giving means strength to the people of Israel,

Our giving is a barometer of Jewish concern in Washington,

And our giving helps solidify our community.

If we remember this lesson, then we will respond to the cost of peace, standing proudly, acting from strength for our children, ourselves, for all Israel.

And we will be a Jewish community fiercely proud to be American and Jewish!

WASTE INTO ENERGY

Mr. KENNEDY. Mr. President, one solution to the energy problem may be as close as our garbage cans and as large as all of our urban waste. The solution is the conversion of garbage into steam, electricity, and methane gas.

An article in Parade magazine on January 29 points out that the average household of four could potentially provide 37 percent of the energy it needs from the waste it produces. Gerald Leighton of the Department of Energy estimates that all the Nation's garbage and other waste could provide 500,000 barrels of oil equivalent per day by 1985 if it could be collected and converted in a practical manner.

I have seen for myself how a good system can work. On December 9 I visited a plant in Saugus, Mass., which converts the waste from the homes of 500,000 people living north of Boston into steam energy. The steam is then delivered to a General Electric plant across the river in Lynn where it is used to create electricity and power industrial equipment. Ironically, the GE plant, which employees 13,000 people, makes oil and gas driven turbines.

The Saugus plant, built entirely with private capital at considerable risk by the Wheelabrator-Frye Co., is the world's largest refuse-powered boiler. While taking in millions of pounds of garbage, the plant adds few pollutants to the air and none to the water, saves landfill, and recovers metals which can be recycled.

Creating energy through waste—including energy from discarded biproducts of agriculture and forestry, is a promising technology. Not only does it create energy but it promises to help alleviate other problems as well, such as declining farm income and the rapid loss of available land for refuse landfill.

Mr. President, I ask unanimous consent that the article, "Waste Into Energy: Is It Practical?" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASTE INTO ENERGY: IS IT PRACTICAL?

(By Peter J. Ognibene)

WASHINGTON, D.C.—One of America's more promising sources of new energy may be as near as your garbage can. According to Donald K. Walter, head of the Department of Energy's waste-technology branch, the average household of four persons could "potentially provide roughly 37 percent of the energy it needs from the waste it produces.

"Waste is an underutilized resource," Walter told Parade, "not an environmental problem to be disposed of. Out of our urban waste stream, we can see producing 2 to 3 percent of our national energy requirements."

But before that potential can be realized, a number of questions must be answered: How will the waste be collected? What technological processes will convert it to energy? Will the price be affordable?

Proven technology already exists for a number of conversion methods. The best known is the anaerobic digestion process. Adding certain strains of bacteria to sewage, animal manure or other organic matter—the scientific term is "biomass"—will produce methane, a flammable gas useful as fuel.

In 1973, an English inventor, Harold Bate, converted pig manure to methane to run his car. In China and India, people use small, inexpensive converters to generate methane as a cooking fuel.

COLLECTION A PROBLEM

Collecting the manure to be converted presents a problem, however. A central collection point is necessary. But methane is a volatile gas; to use a barn or other enclosure would risk explosion. And collecting manure outdoors could prove prohibitively expen-

sive. Roscoe S. Ward, who works on some Energy Department biomass programs, made the point with humor: "You can't put a bag under every cow's tail—and if you did, who'd change the bags?"

To see if large-scale collection can be made economical, the department is providing funds to several projects around the country. The largest is a feedlot in Bartow, Fla., which has 10,000 head of cattle. The methane produced there is expected to supply most of the energy needed for the meat-packing plant nearby.

Most cities simply collect garbage and haul it to dumps or landfills. In the future, however, cities might send their garbage to processing plants that separate organic substances—wood, paper, rubber, most plastics—from inorganic materials such as metal, sand and glass.

MASHED TO PIECES

Tree trunks and engine blocks, along with normal garbage, would go through a shredder in which huge hammers mash everything into pieces no larger than a few square inches. Metals would be sold to recycling plants.

Such a plant is now working in Ames, Iowa. According to Arnold Chantland, director of public works, all the garbage from the surrounding county's 65,000 residents is taken to this plant, which can handle up to 400 tons a day. The organic matter goes to a power plant where it is burned to generate electricity. "We figure we're recovering 93 percent of the waste material that comes into the plant," Chantland said.

At present, however, it would still be cheaper to haul the county's garbage to a dump. "We're paying about $2 to $2.50 a ton more than we would for landfill," said Chantland. But he added: "This is not discouraging to us. Our volumes have increased; fuel and landfill costs are rising."

Yet another method of turning organic matter to energy is pyrolysis. The material is heated in a kiln without oxygen and converted into energy-rich fuels such as synthetic oil, gas or char (similar to charcoal).

Turning garbage into energy is still relatively expensive. A processor capable of handling 1000 tons a day would cost about $50 million, according to Walter. "Where there's good cheap landfill," he said, "it does not look economical" to build such plants.

There are also environmental considerations. "A lot of people wouldn't want a 1000-ton-a-day garbage plant located next to them," Walter noted.

GOOD DESIGN IS KEY

Stephen A. Lingle of the Environmental Protection Agency thinks good design will be the key to public acceptance. "Most plants are designed to have a negative air pressure to keep air flowing into the plant," he said. "If you walk into some of these plants, you'll smell solid waste. But outside, at a reasonable distance, you shouldn't smell it."

But garbage does not necessarily have to be ground, mashed and burned to create fuel. Nature produces methane in landfills, and wells can be drilled to tap the gas. This is now being done at the Palos Verdes landfill near Los Angeles. The gas is purified, pumped directly into the local company's pipeline and delivered to 3000 homes that would otherwise burn scarce natural gas.

Sewage is another potential source of energy, thanks to water hyacinths, fast-growing plants that have often clogged waterways in the Deep South. Scientists at the National Aeronautics and Space Administration in Bay St. Louis, Miss., have found that one acre of sewage contains enough nutrients to grow 800–1600 pounds of water hyacinths a day. The plants—which can turn murky sewage into clear water—not only absorb wastes, pesticides and toxic chemicals, they can also be harvested and converted to methane.

FUTURE UNCERTAIN

Whether waste will eventually provide substantial supplies of energy is anybody's guess at present. A variety of technological processes show promise, but it will be a number of years before we know how much of today's garbage can be put to work economically in tomorrow's gas tanks.

COMPULSORY UNIONISM?

Mr. CLARK. Mr. President, there has been a great deal of what I would call careless debate about what the labor law reform bill would or would not do. On January 28, 1978, the Des Moines Register, the largest newspaper in my home State of Iowa, published an editorial which I think puts the entire matter into the proper perspective. As the Register noted:

"Forced unionism" usually refers to requiring membership in a union as a condition of employment. Iowa law prohibits labor contracts that require anyone to join a union. Nothing in the proposed legislation would modify the Iowa law or compel union membership, and the ad was misleading if it gave the impression that a "right to work" is at stake.

Mr. President, I ask unanimous consent that the text of this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"COMPULSORY" UNIONISM

A full-page ad in the Jan. 25 Register by the National Right to Work Committee charged that a pending Senate bill contains "compulsory unionism provisions" and "is just not acceptable to us or any other fair-minded person." The ad was addressed to Iowa's Senators Dick Clark and John Culver and asked why they are undecided "about forcing unionism on Iowa workers."

"Forced unionism" usually refers to requiring membership in a union as a condition of employment. Iowa law prohibits labor contracts that require anyone to join a union. Nothing in the proposed federal legislation would modify the Iowa law or compel union membership, and the ad was misleading if it gave the impression that "right to work" is at stake.

The National Right to Work Committee apparently justifies its "compulsory unionism" rhetoric on the ground that the measure is so coercive that employers would be forced to agree to union shop contracts. Even if they did, such contracts would have no force in Iowa and other "right to work" states.

The measure, as passed by the House, would increase the size of the National Labor Relations Board, speed up representation elections, provide for faster court action and impose stiff penalties, including double back-pay awards, to illegally discharged workers and possible denial of federal contracts in cases of "willful" violations.

Organized labor contends the measure is needed to combat such management abuses as the conduct of the J.P. Stevens textile company, which was unionized in 1974 but which has not signed a contract and repeatedly has been found guilty of unfair labor practices. Management groups contend the measure is one-sided. They have a point: It proposes remedies for abuses by management but not for abuses by organized labor.

But even labor law specialists who represent management privately concede that critics are overstating their case. Walter Mossberg, who writes on labor matters for the Wall Street Journal, put the dispute in perspective when he commented, "The fact that the bill's provisions might aid organized labor doesn't mean that it would unfairly tip the balance in U.S. labor relations in favor of the unions. . . . Almost nobody on either side denies there are some real management abuses that haven't been deterred by existing procedures and penalties."

Representation elections should not be so accelerated that management is denied a fair chance to tell its side of the story; denial of federal contracts could do more harm to workers than to management. But the bill would not force anyone to vote for, or to join, a union and a lot of the dire consequences predicted by the critics probably wouldn't materialize.

PRESIDENT SIGNS BAYH SPONSORED ACT TO PROTECT CHILDREN AGANIST SEXUAL EXPLOITATION

Mr. BAYH. Mr. President, I am pleased that yesterday the President signed into law the Protection of Children Against Sexual Exploitation Act of 1977.

The Senate unanimously passed the House-Senate conference report on this bill, S. 1585, on November 3, 1977. The House on January 24, 1978 passed this House-Senate conference report by a vote of 401 to 0, which then enabled the bill to be sent to the President for his signature.

This important and needed legislation will fill several voids in current Federal law.

There is currently no Federal statute that prohibits the use of children in the production of materials that depict explicit sexual conduct. The new law would prohibit the production of such materials for this purpose if the materials involved were to be mailed or otherwise transported in interstate commerce.

Similarly, there is presently no Federal statute prohibiting interstate trafficking in boy prostitutes. The law would extend the Mann Act provisions against juvenile female prostitution to include juvenile males.

The law will strengthen present obscenity statutes to provide much more severe penalties for the distribution and sale of obscene materials that depict sexual conduct by children.

The law will prohibit the transportation, sale, or distribution for sale of material depicting sexual exploitation of minors, when such materials are obscene.

Mr. President, as a cosponsor and conferee on this legislation, I wish to state that I believe it will be a most effective Federal response to the problem of sexual exploitation of our children. The law is tough, and most importantly, it is clearly constitutional. S. 1585 can be upheld by the courts and can serve as the basis of successful prosecutions resulting in the reduction of sexual exploitation of children.

Problems regarding the prohibiting of the publication, sale or distribution of pornographic materials involve serious constitutional questions. We must be ever watchful that in our efforts to control offensive pornography we do not infringe on our important constitutional rights of free speech and free press. However, I condemn the sexual exploitation of children for any purpose, in-

cluding commercial purposes, and I believe that S. 1566 together with existing criminal laws prohibiting child abuse and contributing to the delinquency of minors will provide the tools to limit such heinous activities.

Mr. President, as I reported on another occasion to the Senate, recently a most reprehensible and despicable activity was initiated in my State of Indiana. I refer to the nationwide promotion of "Mr. and Miss Nude Teeny Bopper Pageant" at the Naked City Nudist Camp in Roselawn, Ind. This sordid "event" was scheduled for August 27, 1977. I was utterly repulsed at the idea of this contest which was to feature nude children between the ages of 8 to 16. Parents were to be paid $10 to enter their children, $170 was to be given out in prize money, $10 was to be given to each contestant and spectators—for an admission price of $15—were solicited to take pictures of the nude children. Thousands were expected to attend.

On first being notified of this sordid enterprise, I immediately contacted the offices of the State attorney general and the Newton County prosecutor to express my grave concerns about this particularly gross form of child abuse. I am pleased to relate that the attorney general asked the judge of the Newton Circuit Court to issue an injunction restraining this activity. A preliminary injunction order was issued restraining the owner of Naked City from displaying these nude children before an adult paying audience and specifically enjoined the party from holding this contest until a hearing was held. Presently, a hearing is scheduled in Jasper County at which time an attempt will be made to amend the temporary restraining order to a permanent restraining order so that no further activities of this sort can be held. It was argued that the challenged activity constitutes a public nuisance and outrages the public decency at large. I cannot agree more with this argument. Thousands of Indiana residents have joined in signing petitions aimed at launching another legal challenge.

A contest of this sort panders to those interested in child pornography and sex and is exploitive of children and potentially damaging to their mental health—I can imagine the trauma a young girl or boy might experience while parading naked in front of a crowd of leering strangers. The nude contest would also seem to provide an excellent opportunity for child pornographers to meet potential stars. The question comes to mind—if a parent would make a child participate in a nude contest for a chance of winning $100—or just for the $10 that any participant receives—what would they have the child do if the stakes were higher?

It is clear that freedom of expression and the right to privacy are among our citizen's distinctive attributes and nudists should be permitted to indulge in their pastime in privacy. Naked City is not, as ads I have seen, a traditional family nudist colony—run in proper sexual atmosphere. Naked City events in the past have drawn criticism by publicizing their events nationwide and inviting outsiders—who are not nudists and who remain clothed while at Naked City—to pay their way into the camp to view and film the nudists. In the past years many of the participants in the Naked City contests have reportedly been models and strippers looking for publicity. The advertisements for Naked City are blatantly sexual and suggestive of orgies and, while adults have the right to sexual freedom, this is hardly the appropriate atmosphere for a young child.

I cannot help but feel that, if this event took place, many of the children would be unwittingly exploited to satisfy the appetites of spectators.

Mr. President, regrettably State and local laws which cover this type of conduct often cannot be enforced. Such live performances constitute a particular form of child abuse and should be prohibited. Conduct associated with live performances extends beyond State or local jurisdictions and involves widespread use of the mails, television, newspapers, radio, and telephones for promotion and solicitation of a potential audience and participants.

My amendment to S. 1585, which passed this body unanimously, prohibited certain activities relating to live performances using minors in sexually explicit conduct. The House version contained no comparable provisions. However, the House version of the Mann Act contained provisions which would have overlapped with my amendments, and as such I agreed with the conference majority that in light of the fact that the conference substitute provisions contained language that the conferees agreed in most cases would cover the sexual exploitation of minors in live performances as embodied in my amendment, I would withdraw my specific language which would be incorporated in the Mann Act provision. Thus, whoever transports, finances in whole or part the transportation of or otherwise causes or facilitates the movement of any minor in interstate or foreign commerce, or within the District of Columbia or any territory or other possession of the United States, with the intent: First, that such minor engage in prostitution; or second, that such minor engage in prohibited sexual conduct, if such person so transporting, financing, causing, or facilitating movement knows or has reason to know that such prohibited sexual conduct will be commercially exploited by any person, shall be guilty of an offense under this section and shall be fined not more than $10,000 or imprisoned not more than 10 years, or both. Mr. President, I consider it a privilege to be a member of the Juvenile Delinquency Subcommittee—being its former chairman for 7 years—and to follow the leadership of the new chairman, the Senator from Iowa.

This particular problem, of using minors in live performances exhibiting sexually explicit conduct, is designed to be dealt with by my amendment as incorporated into the conference Mann Act provisions.

Mr. President, at this point in the RECORD I would like to ask unanimous consent to put into the RECORD a colloquy that Senator CULVER and I had during the debate of S. 1585 in the Senate on October 10, 1977, when my live performances amendment was unanimously adopted.

There being no objection, the colloquy was ordered to be printed in the RECORD, as follows:

Mr. BAYH. I would like my colleague, the floor manager of this bill, to help me resolve a question or two I have about the proper language.

I do not want to get into an area that is unconstitutional. I do not want to reach protected expression, but I want to make certain that the Senator, as a principal floor manager of this bill, shares my belief that the wording that is used here of "sexually explicit conduct" would cover the type of situation that I am referring to that is occurring up in Naked City at that nudist colony.

Is it the Senator's understanding that according to the court's interpretation "sexually explicit conduct" includes, by definition, the lewd display of genitals or the pubic area of a person under the age of 16?

Mr. CULVER. That is correct.

Mr. BAYH. Is it the Senator's understanding that if a hawker or promotor attempts to promote a live performance in interstate commerce in which boys and girls under the age of 16 are paraded and displayed nude, where adults are asked to come and take pictures, that would be a lewd display of the genital and pubic areas, and that thus it comes within the sexually explicit conduct definition under section 2251 of this bill?

Mr. CULVER. That is correct.

Mr. BAYH. Am I correct in my understanding that in the definition section of the bill, commercial gain is tied into the definition of "promoting" to include "advertising for pecuniary profit?"

Mr. CULVER. That is correct.

Mr. BAYH. Mr. President, extensive hearings have been conducted by the Senate Juvenile Delinquency Subcommittee on the problems of child pornography and I believe the act the President signed today is designed to deal with these problems.

Further, I wish to praise the House and Senate for reaching a suitable and effective compromise on this measure.

I think it is clear that we now have a law that will go a long way toward eliminating an abuse that no society—but least of all our society—should tolerate.

Mr. President, Federal, State, and local law enforcement efforts must maintain a delicate balance in order to curb child pornography. The measure I cosponsored, and which the President signed yesterday, will fill a void in Federal law and will attack the production of materials depicting children in sexually explicit conduct and further, my amendment as incorporated into the Mann Act, will curb the use of minors in live performances exhibiting sexually explicit conduct as a form of child abuse and exploitation. I believe this measure will help to arouse our collective conscience, which will in turn lead to policies and behavior more sensitive to our child victims. We must have a regard for the general tone of our society and be especially watchful and discourage events that tend to lower that tone.

A WINNING EFFORT AT THE VA: AN EXAMPLE OF GOVERNMENT SERVING PEOPLE

Mr. CRANSTON. Mr. President, I would like to take this opportunity to bring to the attention of my colleagues an encouraging story of success. Amid frequent stories of the hard-heartedness of the bureaucracy, the many tales of frustrations citizens encounter in attempting to cut through miles of redtape and Government regulations, and the numerous allegations of the failure of the Federal Government to be responsive to the needs of those it is constituted to serve, incidents such as I will describe are all too rare. I believe that when they occur, they are worthy of our attention and our praise.

As a brief background, Mr. President, members will recall that the Veterans' Education and Employment Assistance Act of 1976 became law on October 15, 1976. That legislation mandated certain revisions in the payment procedures used by the Veterans' Administration for GI bill educational assistance benefits. One such change, effective in June 1977, mandated the payment of GI bill benefits at the end of the month rather than at the beginning—from prepay to postpay. In addition, the VA changed—effective for the fall 1977 enrollment—its educational assistance allowance certification procedures—from annual to semester or quarterly certification.

As chairman of the Senate Veterans' Affairs Committee, I was very concerned about the effects the legislative revisions and the VA's change in certification procedures might have on the timely and accurate processing and delivery of monthly benefit checks for hundreds of thousands of veterans and others receiving assistance under the GI bill. One need only think back to several past long fall enrollment periods—the most notable of which was the fiasco of 1973—when many congressional offices were besieged with complaints about late checks, no checks, and wrong checks. Based on this past experience, there was reason to be apprehensive that the two fall 1977 changes could have combined to cause lengthy waiting periods between the time the veteran enrolled in school and the time he received his first check. And as my colleagues are aware, many educational costs occur at the beginning of the semester. Thus, in GI bill hearings held by the Subcommittee on Health and Readjustment in June 1977 and followup correspondence, I sought from the VA their commitment to undertake vigorous efforts to deliver benefit checks to eligible veterans as expeditiously as possible.

In this connection, on August 24, 1977, I wrote the Honorable Elmer B. Staats, Comptroller General of the United States, requesting that the General Accounting Office (GAO) review and monitor the VA's efforts to mitigate any deleterious effects upon veteran-students—such as increased confusion and delay in the timely processing and delivery of GI bill benefit checks.

On January 5, Mr. President, the Comptroller General advised me of the GAO's findings. This report is most encouraging. The GAO found that the VA had prepared extensively in advance for an allout effort to expedite delivery of services to veterans and to minimize misunderstandings and inconvenience through the process. As a result of these advance preparations, workload monitoring, and outreach efforts, fall enrollments were processed smoothly and in a timely manner. No significant increase in pay complaints or inordinate delays were experienced.

In addition, Mr. President, the GAO noted that the VA "benefited from the personal interest and participation of the Administrator in efforts to get correct checks to veteran students in a timely manner."

I believe, Mr. President, that in addition to the efforts of Max Cleland, the Administrator of Veterans' Affairs, the efforts of all other responsible officials and employees of the VA should be highlighted. These individuals, such as Deputy Administrator Rufus Wilson, Dorothy Starbuck, Chief Benefits Director, Andrew Thornton, Director of the Education Service, and the thousands of VA employees agencywide, are deserving of our gratitude and praise for a job well done and for their individual and collective efforts.

Mr. President, at this point, so that Members can review this success story in detail, I ask unanimous consent that there be printed in the RECORD a copy of August 24, 1977, letter to the Comptroller General of; a copy of his response, dated January 5, 1978; and a copy of a letter I sent Friday, to VA Administrator Cleland congratulating him on this outstanding accomplishment by the VA.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C.,
August 24, 1977.

Hon. ELMER B. STAATS,
Comptroller General of the United States, General Accounting Office, Washington, D.C.

DEAR MR. STAATS: Last year, Congress enacted the Veterans Education and Employment Assistance Act of 1976, now Public Law 94-502. This legislation, and the regulations developed by the VA pursuant to it, mandated certain revisions in the payment procedures of GI Bill educational assistance benefits. In addition, the Veterans' Administration has changed its educational assistance allowance certification procedures—effective this Fall—changing from annual certification of GI Bill recipients to semester or quarterly certification.

As has already been discussed in detail with your staff by the Committee staff, the Senate Veterans' Affairs Committee is concerned that the legislative revisions and the increased workload stemming from the VA's change in certification procedures may cause confusion and delay in the timely processing and delivery of GI Bill benefit checks to students attending school this Fall under the GI Bill. The Committee is particularly concerned with the following procedural changes:

Annual certification of student enrollment has been replaced with semester or quarterly certification.

GI Bill payments will no longer be made at the beginning of the month of entitlement (pre-payment), but rather at the end of the month for which the veteran or eligible person is entitled to receive benefits (post-payment).

Advance payment procedures have, in conjunction with the switch from pre- to post-payment, been modified.

The Committee requests that the General Accounting Office undertake a review of the Veterans' Administration's efforts in regard to mitigating any deleterious effects upon veterans as a result of these alterations. In this regard, the Committee has a special interest in the identification and evaluation of efforts which the VA central and regional offices have undertaken (1) to avoid—to the extent possible—delays in the processing and delivering of GI Bill benefit checks to eligible veteran-students; (2) to facilitate the application for payment of work-study advances (§ 1685) and educational loans (§ 1798); (3) to inform eligible veterans of the existence of the work-study and educational loan programs as a means to mitigate any financial hardship (particularly early in the year) which the veteran may incur as a result of these changes; and (4) to impress participating educational institutions with the need for them to submit to the VA, as quickly as possible, error-free reports on veteran-student status changes.

In conducting this study, the Committee would appreciate the examination of at least six of the larger VA regional offices (geographically dispersed) and the VA central office.

The Committee believes that it is important that prior to September 10, 1977, the Committee staff receive from GAO a preliminary briefing on the progress of the study and a preliminary evaluation of the VA's efforts described above. Thereafter, the Committee requests that GAO monitor the VA's continuing efforts in this regard during the 1977–78 school year to the extent GAO's findings require. The Committee would appreciate appropriate periodic briefings through the Fall on these matters. Finally, after the examination and evaluation of VA's efforts have been completed, the Committee would appreciate a written report summarizing GAO's findings.

Enclosed is a copy of a letter I have written today to the Administration of Veterans' Affairs expressing the Committee's concerns and requesting his full cooperation with your study.

As in the past, I am most appreciative of any assistance you and your staff can provide us. Many thanks for your prompt attention to this matter.

With best wishes,

Sincerely,

ALAN CRANSTON,
Chairman.

WASHINGTON, D.C., *January 5, 1978.*

Hon. ALAN CRANSTON,
Chairman, Committee on Veterans' Affairs, U.S. Senate.

DEAR MR. CHAIRMAN: Your letter of August 24, 1977, requested that we review and monitor efforts of the Veterans Administration (VA) during the fall of 1977 enrollment period to:

(1) avoid delays in processing and delivery of educational benefit checks to veteran students;

(2) promote and facilitate educational loan and work study programs to alleviate financial hardships of veteran students; and

(3) emphasize to schools the need to give VA quick, error-free student enrollment and status reports.

We briefed your office on September 8 and November 8 on our tentative findings. Prior to our final report to the Committee, your office requested an interim report.

We reviewed 1977 fall enrollment processing and educational assistance payment

inquiries (pay complaints) at VA's Washington, D.C., headquarters and regional offices at San Francisco, Seattle, Chicago, St. Paul, Atlanta, St. Petersburg, and Washington, D.C. We observed processing of enrollment documents, reviewed workload volume and timeliness, discussed with VA central office and regional office officials monitoring procedures and internal VA controls for prevention of backlogs, and analyzed the overall efficiency for delivering student benefit payments in a timely manner.

We also visited several schools and talked to a number of veterans at these schools.

SUMMARY OF FINDINGS

VA was aware of the potential processing difficulties and fall payment problems stemming from legislative revisions and called for an all out effort to expedite delivery of services to veterans and to minimize misunderstanding and inconvenience. VA officials said that due to their advance preparations, fall enrollments were processed smoothly and in a timely manner.

Based on our work to date we found that VA:

Prepared extensively for the implementation of legislative changes from a prepayment to a postpayment system through circulars, media publicity, letters to schools, personal contacts, and task force monitoring of enrollments;

Placed special emphasis on streamlining applications for loans and work-study agreements so veteran students could avoid "financial binds";

Established and maintained communications with school officials and did not realize appreciable delays due to erroneous data from schools;

Centrally monitored the regional enrollment processing volume and backlog against desired weekly output levels;

Experienced no inordinate delays with student fall enrollment workload;

Incurred no significant increase in pay complaints especially related to the postponement changes, advance pay changes or the 1977 fall enrollment in particular;

Benefited from the personal interest and participation of the Administrator in efforts to get correct checks to veteran students in a timely manner.

Based on our observations and conversations with VA officials, we believe that VA's advance preparations, workload monitoring, and outreach efforts avoided workload backlogs, inordinate delays, or inaccuracy of payment checks.

We trust that this report will be satisfactory to your needs.

Sincerely yours,

ELMER B. STAATS,
Comptroller General of the United States.

WASHINGTON, D.C.,
February 3, 1978.

Hon. MAX CLELAND,
Administrator of Veterans' Affairs, Washington, D.C.

DEAR MAX: In August, 1977, I wrote to the Comptroller General of the United States with respect to the implementation by the Veterans' Administration of certain aspects of the payment procedures for GI Bill educational assistance benefits that were scheduled to take place during the fall of 1977.

My letter requested the General Accounting Office to review the VA's efforts to mitigate any deleterious effects upon veterans resulting from the following revisions:

The change in certification of veteran-student enrollment from annual to semester or quarterly certification;

The change in GI Bill payments from the beginning of the month of entitlement (prepayment) to the end of the month for which the veteran or eligible person is entitled to receive benefits (post-payment);

The change in advance pay procedures.

Specifically, the Committee sought identification and evaluation of efforts which the VA Central and Regional Offices had undertaken with respect to: (1) avoiding—to the extent possible—delays in the processing and delivery of GI Bill benefit checks to eligible veteran-students; (2) facilitating the application for payment of work-study advances (section 1685) in educational loans (section 1798); (3) informing eligible veterans of the existence of the work-study and educational loan programs as a means of mitigating any financial hardship (particularly early in the year) which a veteran may incur as a result of these payment procedure changes; and (4) urging participating educational institutions to submit to the VA, as quickly as possible, error-free reports on veteran-student status changes.

Recently, in a letter dated January 5, 1978, I received an interim report from the Comptroller General. The GAO reported, "based on our work to date, we found that the VA:

"Prepared extensively for the implementation of legislative changes from a prepayment to a postpayment system through circulars, media publicity, letters to schools, personal contacts, and task force monitoring of enrollments;

"Placed special emphasis on streamlining applications for loans and work-study agreements so veteran students could avoid 'financial binds';

"Established and maintained communications with school officials and did not realize appreciable delays due to erroneous data from schools;

"Centrally monitored and regional enrollment processing volume and backlog against desired weekly output levels;

"Experienced no inordinate delays with student fall enrollment workload;

"Incurred no significant increase in pay complaints especially related to the postpayment changes, advance pay changes or the 1977 fall enrollment in particular;

"Benefited from the personal interest and participation of the Administrator in efforts to get correct checks to veteran students in a timely manner."

Max, I want to congratulate you and all other responsible officials and employees of the Veterans' Administration on this laudatory report. I'm sure that your personal efforts, those of Chief Benefits Director Dorothy Starbuck, and, most importantly, of thousands of dedicated VA employees in the field and at headquarters, saved many veteran-students from lengthy delays in receiving GI Bill checks which might otherwise have resulted from the payment procedure changes.

Please extend my gratitude and admiration to all those VA employees whose hard work, skill, and commitment produced these outstanding results.

Thank you for your great attention to this matter, Max. You should all be proud of the Veterans' Administration accomplishment here.

With warmest regards.

Cordially,

ALAN CRANSTON,
Chairman.

TUITION TAX RELIEF

Mr. MOYNIHAN. Mr. President, at recent hearings before the Finance Committee on proposed tuition tax credit legislation, Senator S. I. HAYAKAWA offered testimony that for eloquence, stylistic grace, insight, and wisdom about the educational process rates as one of the finest statements it has been my pleasure to encounter. Because all of our Senate colleagues deserve an opportunity to reflect on the words of the distinguished junior Senator from California, I ask unanimous consent that the full text of his remarks be printed in the RECORD.

I believe Members of the Senate may also be interested in a recent editorial on this subject published in the Washington Star, and I ask unanimous consent that this, too, be printed in full in the RECORD at the conclusion of Senator HAYAKAWA'S remarks.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR S. I. HAYAKAWA

Mr. Chairman: I am delighted to testify here today in favor of proposals to provide tuition tax relief. As a former educator, I am interested in this approach to restoring consumer control over education. I must admit that I am more interested in supplying a tax break at the elementary and secondary levels of education, but there are certain aspects of college tuition tax relief that appeal to me as well. I would like to address these areas first and then elaborate on the need for tuition tax relief for elementary and secondary education.

One of the major failings of our present system of financial assistance at the college level, as I see it, is its almost exclusive concentration on young, full-time students. The part-time student or the adult, evening student rarely receives any educational aid. But yet, as I look back over the best-remembered students in my years of teaching, those who remain most vivid in my mind are the adult, evening-class students at Illinois Institute of Technology, the University of Chicago, and San Francisco State. They were school teachers, firemen and policemen, business executives, nurses, at least two retired colonels, women starting a new life when their children were old enough to take care of themselves, men in their mid-thirties and forties contemplating a change of career. These mature adults have been my most exciting students. I've forgotten most of the kids. No doubt they have forgotten me.

Adult students are mature. They are, therefore, likely to be self-directing rather than dependent. They often have a reservoir of practical experience that is in itself a resource for further learning; and what they learn is not theory to be applied some day, but something to be used at once in their situations outside the classroom.

Today, there are in the United States more part-time college students than full-time students. This trend is likely to continue as more and more people discover that education is a life-long process. If we want to encourage this life-long learning, we should not provide assistance exclusively to young, full-time students, but to students in all stages of life. We can do this by providing tuition tax relief to all students, or, more precisely, to all who pay for their schooling. I therefore strongly recommend to this Committee that any tax relief provided for tuition payments be extended to part-time, as well as full-time students.

A second area of education which interests me is vocational education. Until recently, vocational education has received little public attention. This is probably a consequence of the contempt with which our educational system views some kinds of work. It tends to overvalue white-collar work at the expense of other labor. Students believed to be low in academic talent are steered into "vocational" programs, while gifted students are steered away from them, as if they were too good to work with their hands or with machinery.

Such a distinction is arbitrary and invidious, inflicting an injustice both on the academically slow and on the academically

gifted. Throughout all our high school and colleges there should be maintained an active relationship between the academic world and the world in which people labor for a living.

I believe that our system of financial assistance for higher education should be neutral, biased in favor of neither academic nor vocational pursuits. Why should we encourage someone to study Latin and Greek as opposed to auto mechanics, typing, or shorthand? We shouldn't! We should let the individual make the choice independently of the availability of government financial assistance. We can do this by providing tuition tax relief to both academically and vocationally oriented students. Therefore, I think it is important that any tuition tax relief proposal reported from this Committee apply equally to all types of education.

Finally, let me discuss what I believe to be the most important part of tuition tax relief—that provided for elementary and secondary education. I believe that public education at the elementary and secondary levels is approaching a crisis. Taxpayers have watched all levels of government quadruple the level of spending on education since 1960. At the same time, the quality of education has shown no corresponding improvement. There is much public concern today about the deterioration of public education at the primary and secondary levels.

Parents seem helpless to control their children's education. Teachers and administrators are often more interested in pleasing government bureaucrats who control the funds rather than parents who do not directly pay for their children's education. The structure of the system stands in the way of accountability to parents. There are instances where students receive their diplomas whether or not they can read or write, while their teachers and administrators receive their salaries and raises regardless of student performance.

I am particularly concerned about the quality of public education for the minorities and less fortunate in our country. It is widely recognized that the quality of public education available to blacks is inferior to that of the overall population. The typical bureaucratic reaction to this sad state of affairs is to recommend more school integration and busing, greater education budgets, and higher salaries for teachers. I do not think more money and more busing are the answer. There is a great body of evidence that indicates that: (1) black students do not have to sit beside white students to learn, although it might be to the advantage of white students to have that cultural exposure; and (2) high quality education is not necessarily dependent on large school budgets. There are better alternatives.

For instance, many black youths today have lower levels of academic skills than their parents who attended school when blacks were poorer and less free. It is also noteworthy that for years, many black parents have sent their children to Catholic and Black Muslin schools where per capita spending is much lower, but where the students achieve higher levels of academic skills than their counterparts in public schools. Numerous specific examples of this phenomenon are documented in an article entitled "Patterns of Black Excellence" which appeared in the spring 1976 issue of The Public Interest. This article was written by a good friend of mine. Dr. Thomas Sowell, an economist now at Amherst College in Massachusetts, who, if it makes any difference, happens to be black. I ask the Committee to include this article as part of my testimony.

Another enlightening article appeared recently in the Washington Post. This article focused on a Catholic school located in the Anacostia area of the District of Columbia. It is Our Lady of Perpetual Help Elementary School, which educates children from kindergarten through eighth grade. The school has 517 students, all of whom, except for 3, are black, and 42% of whom are Protestant. Annual tuition at the school is $330 for parish members, whose education is subsidized by other church income, and $505 for non-members, who pay full cost. By comparison, the annual per pupil cost in the D.C. public schools is $2,000.

But when you compare the levels of academic achievement of the students at Our Lady of Perpetual Help and the public school students, the results are astounding. Although Our Lady of Perpetual Help spends about one-fourth the amount per student as the public schools, its level of academic achievement is much higher. Its students score at almost the national average in reading according to standardized tests. For instance, eighth grade students at Our Lady of Perpetual Help read only seven months below the national average, whereas D.C. eighth grade public school students read 2½ years below the national norm. The level of achievement of public school students in Anacostia is even lower. Mr. Chairman, I ask that this article also be included in the transcript as part of my testimony.

Mr. Chairman, national data show that it costs less to educate a student at a private school than at public schools. In 1974, private elementary and secondary students were educated at a per student cost of $1,191 as opposed to $1,281 in the public schools. In parochial schools, the average per pupil cost was $310 for elementary and $700 for secondary.

How can schools with a lower per pupil expenditure provide a better education? I think the examples cited above give us the answer to that question. In all of the private and parochial schools where the students were performing better than their public school counterparts, there were several common characteristics in their approach to education—an emphasis on basic learning skills such as reading, spelling, and arithmetic; and insistence upon strict behavioral standards; and the consistent execution of disciplinary measures when necessary.

It is encouraging to me that so many parents have had the good sense to seek out a better education for their children. In Chicago, for instance, it has been estimated that 10 percent of all black children go to Catholic schools. I believe that to improve black education, as well as education in general, we need to restore parental control. As Dr. Walter Williams, a black economist at Temple University, writes:

"To understand how Blacks can be given more effective choice in education requires that we recognize that just because education is publicly financed does not require that it be publicly produced."

Mr. Chairman, today 5.3 million out of 49.5 million elementary and secondary school students attend private or parochial schools. Parents who send their children to these schools pay double for education, once through their taxes and once in the form of tuition payments. And as the cost of education increases, fewer parents have the financial flexibility to shop outside the public schools for an education for their children. Their plight is complicated as inflation has eaten away at real personal income by artificially pushing people into higher and higher tax brackets. Unless some sort of financial relief is provided to parents, essentially all children but those of the very rich will be forced to find their education in the public school system. As more and more private schools are forced to close their doors, there will be less and less competition for the public schools, and the quality of public education will deteriorate even further.

The future of our country depends on the quality of education we provide today. This in turn, in my opinion, depends upon the existence of independent schools competing with public schools, and upon our making it possible for parents to choose the kind of education they want for their children. There is no reason why only the wealthy should have this choice.

I think tuition tax relief is an excellent way to provide the financial flexibility for parents to have alternatives. I am encouraged at the interest that has developed in this concept in the past few years, and I hope, that the Committee reports some kind of tution tax relief bill, covering elementary through college education, to the Senate for its consideration. I thank the Committee for the opportunity to testify on these bills.

Tuition and Tax Credits

Sen. Daniel Patrick Moynihan believes that tuition tax credits are "an idea whose time has finally come," and so do his influential co-sponsors in the Senate.

If so—if, as the senator also submits, "the people of this nation want it"—the message isn't getting through to those who think they know what the people *need*.

There were hearings last week on the Moynihan-Packwood tuition credit bill in the Finance subcommittee on taxation. The hostile reactions to the bill reflect the same administration attitude that greeted Sen. William Roth's similar proposal of a few weeks ago. It seems to us a case of fatigued imagination.

The tax-credit offset of tuition, said several administration spokesmen, would wickedly benefit "the rich" (for which read, middle-income taxpayers). One Treasury offical also charged that the bill "would make it easier and cheaper for a student to attend a private school if his family wished to avoid an integrated public school."

These objections merit a passing glance. Indeed, tax credits would be available to all families, regardless of income, who send children (or a spouse) to a college or university (public or private), a vocational school, a secondary or elementary private school. The credit would equal half the tuition, up to a ceiling of $500 per student.

Yet it isn't a "rich man's bill"; it is a taxpayer's bill. "Most of the benefit," according to Senator Moynihan, "will go to families earning well under $20,000 a year, and by making the credit refundable the proposed legislation will also provide a real financial boost to low income families with limited tax liability."

This evidently false designation of a tax expenditure in aid of education as a bonanza for the wealthy is typical It is supposed to be an argument stopper, because it has somehow become official dogma in this administration that the only value worth seeking through tax policy is the redistribution of income from middle-class taxpayers to those designated "poor" under the escalating federal definition of that term. Redistribution is a proper concern of tax policy, but not the only one. Others worth consideration are (a) the preservation of a working system of private education, both as a check on the quality of public education and as a self-justifying value in a pluralistic society; and (b) a meaningful choice, for all parents, between public and private education.

The suggestion that parents might be "avoid an integrated public school" hardly rises to the dignity of argument. Most parents, if we are not mistaken, are looking for orderly, disciplined, effective education. To what degree it is integrated is a secondary concern—not, of course, a trivial concern. But the Supreme Court recently declared, in the Northern Virginia case of last term, that no tax benefits shall be available to racially segregated private education. That issue is closed.

The principal concern—at least where secondary and primary education are con-

cerned—is whether a tuition credit program of the sort Senators Moynihan and Packwood propose can meet the stern tests of religious pluralism now insisted upon by the Supreme Court. As matters stand, that is at least doubtful.

It is, however, Senator Moynihan's view—a view we share—that in the recent era the Court has imposed needlessly restrictive constitutional limits on state aid (and by implication, federal aid) to private "religious" education. In a commencement address last May at Lemoyne College, New York, the senator said of this line of jurisprudence that "the kindest thing to say is that (the decisions) are unpersuasive (and) the unkindest thing to say is that the Court has been given the thankless task of providing constitutional legitimacy for the religious bigotry of the 19th Century."

And what are the grounds for that suggestion? As recently as 1876, after more than half a century's experience with public support of private religious education in New York (and other states), its foes recommended a constitutional amendment to forbid it. The implication is that nothing in the establishment clause of the First Amendment renders such aid clearly unconstitutional.

As is well known, moreover, the Court's rigid line against "excessive government entanglement with religion" has been repeatedly strained, if not breached, by state programs of tuition assistance to private higher education, some of it to institutions far from secular in sponsorship and educational philosophy.

In any event, we share Senator Moynihan's basic feeling—that the "constitutional" case against tax benefits for parents of parochial school students is an unattractive vestige of archaic prejudice. Practically speaking, it is difficult to show that any federal aid "advances" religion per se; recent studies cited by the senator suggest that the "religious" effects of parochial education (measured by church communicants or candidates for the priesthood) are practically nil. But even if they were substantial, may we not distinguish between such desirable effects and "an establishment of religion"?

Putting aside the First Amendment problems, the main fact with which public policy must reckon today is this: A swollen system of public education threatens to swallow up the financially-starved private educational sector, to the eventual benefit of neither. For various reasons, private education is pricing itself out of middle-class reach. The Moynihan-Packwood plan would not necessarily work to the benefit of either sector, private or public; it would offer taxpayers an enhanced choice and would probably help restore a healthy balance.

THE INTERNATIONAL DEVELOPMENT COOPERATION ACT

Mr. CLARK. Mr. President, I am pleased at the great interest that is being expressed in Senator Humphrey's last major legislative initiative, the restructuring on U.S. foreign assistance efforts. I am excited by the prospect of finally dealing with the long catalog of complaints about U.S. foreign aid program by entirely rewriting the foreign assistance legislation. And I am quite encouraged by the positive response Senator Humphrey's initiative has received from the executive branch.

Many of us in Congress have recognized for a long time that present efforts in foreign assistance were inadequate to the task, that the fragmentation of programs among a number of different agencies limited the effectiveness of our efforts, and that development concerns were not adequately taken into account in international economic policymaking. Senator Humphrey gave us a fresh opportunity to deal with these concerns. We ought to seize this initiative to make needed changes.

A number of leading newspapers have recognized the importance of Senator Humphrey's legacy through this legislation. Both the Washington Post and the Christian Science Monitor wrote editorials on the bill last week. Both newspapers stressed the importance of the subject matter of this legislation, and saw it as far more than legislation dealing only with U.S. foreign assistance. Our entire set of economic and political relations with the developing countries is at stake. For it is from these countries that we can expect the most growth potential in our export markets, the greatest source of needed raw materials, and the most difficult issues in arms sales, regional conflicts, and the source of tensions between the great powers.

Just one very important example of our links with these countries: What they are able to achieve in food production in the next 25 years will have profound repercussions on food prices in American supermarkets. Great shortages in these countries could have a highly destabilizing impact on American agriculture, with disruption running all the way from farm to the checkout line. It is urgent that we make our aid more effective and more harmonious with other international economic policies. Senator Humphrey's bill, now supported by a significant number of Senators, gives us a chance to do that.

Mr. President, I ask unanimous consent that the articles from the Washington Post and the Christian Science Monitor be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 4, 1978]

HUBERT HUMPHREY'S AID FOR AID

Hubert Humphrey left behind a proposal, brought to public attention after his death, to collect the scattered and badly coordinated bits of American foreign aid into one organizational place, the better for the President to direct and the Congress to oversee. He figured this would permit a more efficient use of the resources the United States expends on "development" through its own programs and the international banks. He thought such a reorganization would help a now-muddled Congress to regain a vision of the responsibility of the United States in meeting the international obligations that cold self-interest compels it to acknowledge.

As usual on questions of aid, as on so much else, Sen. Humphrey was right on the money. Aid is in crisis. Americans have not made an adequate post-Vietnam transition to the concept that development assistance, far from being a cold-war tool or an expression of humanitarianism, is essential to the relations of the United States with a large number of nations increasingly important to it. Not only have the sums voted for development been niggardly; also, to the funds that are voted, Congress has gotten into the habit of attaching restrictive conditions—protectionists swooping in from the right, human rights activists from the left. The Humphrey approach, offering the possibility of a fresh start, could break that logjam.

Such is the respect—not merely sentiment—for Mr. Humphrey's political command of development issues that his bill has gained substantial early Hill support, even from some of the quarters whose committee jurisdiction the measure would reduce. Hearings will open in March. It remains unclear, however, to what extent the administration will wish to use the bill, and the political steam building up behind it, to advance its own still-tentative plans to reorganize foreign aid in Washington and to focus it abroad further on the poorest nations and the poorest people. Reorganization, requiring bruising battles over turf, promises more political infighting than this administration may want to take on.

The result of a successful effort, however, would be a foreign-aid instrument measurably better suited to serve the President's own high-minded development ideals. That in turn would ease aid's path in Congress and leave the United States better able to play its natural and, in recent years, poorly filled leadership role in mustering support for global development. The practical advantages are so apparent that it is not even necessary—though it certainly is nice—to portray the new aid legislation as a memorial to Hubert Humphrey.

[From the Christian Science Monitor, Feb. 2, 1978]

HUMPHREY WORLD AID PLAN

During his last few months Senator Hubert Humphrey devoted much of his time to a sweeping legislative proposal to reorganize the foreign aid program of the United States. It deserves thoughtful consideration.

For a man who fathered some ambitious government programs, the proposal might seem rather plebeian for a last legacy to the nation—even though James Grant of the Overseas Development Council believes such an overhaul could increase the efficiency of foreign aid by 50 percent.

But it wasn't plebeian. Humphrey wanted to prepare the United States for what he foresaw as a "gathering storm." The Churchillian phrase does not apply to the possibility of another world war, but of fundamental and radical change in the relations between the poor and rich countries of the world.

He wanted to provide the nation with a framework "to channel our creativity and inventiveness in meeting the challenge of abolishing the worst aspects of poverty from the face of the earth."

Reflecting a concern that extended beyond the borders of his own nation to the majority of mankind in the developing world, he said in a statement finished just two days before his passing: "We live in an era in which man's scientific, political and sociological advancement should make poverty an anachronism."

However, as he noted, it has not so far. Today 700 million adults in the world are unable to read or write. More than 500 million are suffering from severe hunger and malnutrition. It has been estimated that 10 to 15 million people die each year unnecessarily from economic and social deprivation.

Through his bill, Mr. Humphrey hoped to give U.S. development assistance policy more focus. Right now various development activities are scattered among the Agency for International Development, the State Department, the Treasury, the Department of Agriculture, and ACTION (the Peace Corps). The result in the present and past administrations has been some policy chaos and an inability to grasp the "big picture" in dealing with development problems. Moreover, the basic Foreign Assistance Act of 1961 has been encrusted with some 28 amendments over the years, some contradictory in nature.

The Humphrey bill would combine the various aid activities into a separate agency, the International Development Cooperation Administration. Its administrator would report directly to the President. The legislation would also spell out more clearly the goals of U.S. foreign aid—such as alleviation of "the worst physical manifestations of poverty among the world's poor majority" and promotion of conditions to enable developing countries to achieve "self-sustaining economic growth with equitable distribution of benefits."

Unfortunately, passage of the legislation, which now has Democratic and Republican sponsors, will not be easy. It may face the opposition of some bureaucrats, for instance, in the Treasury, whose kingdoms will be reorganized or dissolved. Nor is foreign aid a vote-getting measure in an election year. Success will probably require the White House to announce its approval of at least the basic concepts of the bill.

If passed, however, the legislation could give the nation the basic tools for dealing more effectively with the North-South issue, the split between the rich and poor nations that will undoubtedly trouble the world for decades.

Says Mr. Grant: "Humphrey left us with a vehicle of hope, a challenge. Have we the capacity to pick up this charge?"

It is important the United States do so.

THE LABOR LAW REFORM BILL

Mr. MOYNIHAN. Mr. President, on November 21, 1977, the Committee on Human Resources heard testimony on S. 1883, the labor law reform bill. Among the witnesses was Ben J. Wattenberg, who testified on behalf of the Coalition for a Democratic Majority, of which he is chairman. Senator JACKSON and I have the honor to serve as honorary cochairmen of Coalition for a Democratic Majority.

I ask unanimous consent that Mr. Wattenberg's statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TESTIMONY BY BEN J. WATTENBERG

Some 42 years ago congress adopted the National Labor Relations Act which declared it "the policy of the United States . . . to encourage the practice and procedure of collective bargaining." That Law brought order to American industrial relations, codifying and carefully balancing the rights of management and labor. It was a remarkable legislative achievement. The system of collective bargaining and the unique American labor movement it fostered are today among the great strengths of our social fabric.

The basic wisdom of the NLRA has been proven beyond serious challenge. But, naturally enough, certain of the law's administration and enforcement provisions have grown outdated. It is this which the Labor Law Reform Bill seeks to correct. *Nothing in the Bill would alter the basic balance of rights between labor and management envisioned in the original Labor Relations Act.* Rather these amendments are designed only to assure that rights guaranteed in principle are enjoyed in practice. It does so by modernizing and streamlining the functioning of the National Labor Relations Board and by stiffening penalties for certain violations of the Act. The case for such reform seems to us to be compelling.

Basically, two issues are at stake in the consideration of the Labor Law Reform Bill.

The first concerns the value of unions as an institution in our society. Although the Bill will give unions no new rights, it will, no doubt, facilitate union organizing in areas where it has been held back by illegal employer actions or merely by the sluggishness of current NLRB procedures. We believe this is all to the good.

One need not approve of every action taken by every union nor need one side with the unions in every dispute, to understand that unionism, per se, is an essential ingredient of the American way of life.

Unions have benefitted America economically by generating the purchasing power which has undergirded our prosperity. They have brought stability and rationality to American industrial relations. They have helped in shaping the world's most productive workforce without which the great creative achievements of American business would not be possible.

Unions have contributed to making our society a just one by providing millions of workers protection against arbitrary treatment and a vehicle for seeking fair compensation for their labor.

Unions have benefitted America socially by providing dignity at the work place. They have served as a vehicle for the integration of scores of millions of poor and immigrants into society's mainstream. They have lent substance to the principle of civic equality by giving a measure of power to those otherwise of little wealth or station.

Unions have benefitted America politically by serving as a force both for progress and for stability. They have provided the impetus for the passage of much of our enduring social legislation, legislation which, although often controversial at the time of passage, came to be almost universally supported. In times of war, of polarization or other crises the consistent, steady policies of labor have been a source of strength and stability in our national life.

In sum, unionism is a very positive force in American life. While we would not compel every worker to join a union, we believe that every worker who desires to join a union should have the opportunity to do so. Today, some workers find that the opportunity is limited by the administrative weaknesses in the NLRA. The adoption of S1883 would constitute an important step toward remedying that.

The second basic issue raised by the Bill is not a matter of labor relations, but one of preserving the integrity of our system of law. It is widely understood that it is bad public policy to adopt laws which are not enforceable. To do so is only to invite capricious administration, discrimination, corruption and diminished public respect for law. Precisely the same deleterious effects may be expected from laws whose penalties are so mild that a violator may expect to gain more from violating the law than it will cost him even if he is caught at it.

This seems to be the situation we have reached with respect to certain categories of violations of labor law. Apparently some employers, mindful of the principle of "cost effectiveness" have concluded that it will cost less to willfully violate the law and pay legal fees, fines, and back-pay awards than it would cost to allow their employees to become unionized. Thus, we have the now celebrated case of the J. P. Stevens Company which has been cited for scores of violations of the NLRA, a record which has led a Federal Court to describe that firm as a "notorious recidivist." Thus, a leading management consultant on labor relations is quoted in the press (Washington Star, June 8, 1977) as openly advising his clients to violate the Act "if you are doing it for the right reasons." Thus, we have witnessed an enormous upsurge in the number of NLRA violation cases taken to the National Labor Relations Board in recent years. All who believe in the rule of law, even those least sympathetic to the cause of unionization, must agree that this situation is undesirable. The Labor Reform Bill would remedy this by providing a measured increase in the law's penalties, an increase which should make them sufficiently severe to deter willful violations.

For all of these reasons we strongly urge adoption of the major provisions of S1883, the Labor Law Reform Bill.

AMERICA'S NEED FOR FARSIGHTED AND OPTIMISTIC LEADERSHIP

Mr. GOLDWATER. Mr. President, on January 24, Mr. W. M. Agee, who is chairman, president, and chief executive officer of the Bendix Corp., spoke before the Kiwanis Club in San Francisco. This is a very interesting speech because it comes from a businessman and recognizes the relationship of the businessman and business to the Government but, more than that I would say in the reverse order. I ask unanimous consent that Mr. Agee's speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE AGENDA FOR 1978

Thank you for asking me to be here today. Its a special pleasure to be one of your first speakers of the New Year.

The beginning of a new year is a traditional time for taking stock, for reviewing what has come before and what is likely to be ahead. It's also a good time to try to sort out the trivial from the important, to put our daily concerns in better perspective.

As we taken inventory, we find that we have our share of problems with unemployment, energy policy, race relations, pension funding, pollution, taxes, crime, housing, and education.

For Americans, this list has become a familiar litany. A couple of the items on it—pension funding and energy—are relatively new. The others have been with us a long while, and are likely to be included in our inventory for some years to come.

But it was only recently that we were forced to realize the importance of the energy question. Our thinking and our actions have been transformed dramatically since the events of 1973 underscored our society's dependence on adequate supplies of energy. As we meet today, the likelihood is for still more changes in this area.

Similarly, it is only in the very recent past that we have begun to come to grips with the problem of pension funding in this country. It was only at the end of last year that Congress passed the largest tax increase bill in our peacetime history, in order to begin to address the gap between the promises that have been made to those eligible for Social Security and the resources necessary to meet those promises. We could talk about this issue all day, because it is one which is still not receiving the attention it deserves.

Perhaps the problem is that our political system has an inherent inability to deal with long range problems of enormous magnitude in advance of some crisis that focuses public attention on the subject. That certainly seems to have been the case with energy, and the pattern was repeated in the Social Security debate. The demographic factors underlying the increasing insolvency of the Social Security system have been plain for all to see for years, but it was only as outright bankruptcy began to approach the government was able to act.

Perhaps that is one of the prices that we pay for democracy, an excessive preoccupation with the immediate problems of the day by our highest officials. But it need not always be so.

There have been occasions when vision and

leadership have combined to create a national effort out of proportion to the general public perception of the immediate need. These have generally been occasions of great achievement, and the most recent grand example was the effort to put a man on the moon.

President John F. Kennedy saw the exploration of space as more than a response to Russian technological advances and more than a prudent expenditure in the name of national security. Those factors were extremely important to him, but he also saw space as a challenge to American leadership and ingenuity. As he said at the time, "This is the new ocean and we must sail upon it." And so, after one of the most dramatic mobilizations of talent and technology, an American set foot on the moon.

I want to recall the later history of space exploration as a public policy question and to speculate a bit about the current state of public opinion on the subject.

I've always thought that the space program had a paradoxical fate. There we were on July 20, 1969, watching an American walk on the moon, a feat which no one from any other country has to this day repeated. There was a tremendous feeling of pride and accomplishment.

But the funds that made that moonwalk and later ones possible had been voted in earlier years. And by the time the actual landings on the moon were taking place, NASA was already facing its now familiar difficulties with a parsimonious Congress.

Fiscal year 1965 was the peak year for funding of NASA, when Congress appropriated $5.3 billion for the agency's activities. The fiscal year 1978 budget is only $4 billion, in dollars whose purchasing power is much less than the 1965 funds.

On this reduced scale, the space agency has done some important and useful things. Orbiting observatories and space telescopes to increase our astronomical observation capacity are underway, and beginning to produce data that may yet settle the dispute over the origins of the universe. Development of reusable or permanent hardware such as the space shuttle orbiter will make possible scientific and manufacturing undertakings that cannot be accomplished on earth. The satellites Pioneer 10 and Pioneer 11 will explore Jupiter and Saturn, and, if sufficient funds are available, will go on beyond the solar system.

"If sufficient funds are available," has, of course, become the catch. Funds are now available—grudgingly—for the most arguably practical missions that NASA proposes.

If we look for the historical cause of this tight-fisted attitude in Congress, I think we run squarely into the two major events that dominated American political life in the last years of the 1960's and on into the early 1970's. First of these was the war in Vietnam; second was the end of the seemingly effortless economic expansion of the American economy that had begun with the Kennedy tax cut.

As early as 1966, and increasingly thereafter, the war in Vietnam came to dominate our political life. I don't need to recount for anyone here the bitterness and division of those times. As a country, our heritage from Vietnam has been a deep generational conflict, expressed in an anti-idealism and a cynicism which evidences itself pervasively in American life.

The growth of permissive lifestyles was hardly created by the Vietnam war. But the deep suspicion of presidential motives and the pronounced desire to reduce America's role as a world power that accompanied opposition to the war made it fashionable to question *all* accepted values. Increasingly, adoption of the symbols of the "counter-culture" was necessary in order to be an acceptable member of certain intellectual and social circles.

Official obtuseness, which appeared to many as duplicity, combined with excessive rhetoric in defense of our actions in Vietnam to create a deep and abiding cynicism about the honesty and motives of American political leadership, a distrust which was catastrophically magnified by the later events of Watergate. Increased disinterest in political participation, as shown by the declining numbers of people voting in Presidential elections, now seems a deeply ingrained feature of our political life.

At the same time, and to some extent for the same reason, the era of inflation-free prosperity came to an end. The enthusiasm with which new Federal programs had been enacted in the mid-1960's can only be partly attributed to President Johnson's political skills with Congress and the temporary sense of national unity inspired by President Kennedy's assassination.

It was also a period of prosperity in which revenues rose quickly enough for the Federal government to finance these programs without tax increases. Only when the burden of the Vietnam war was added to the federal budget did we begin to spend beyond our means, and the inflation was set loose that eventually spelled recession.

As a result, the debate over domestic politics in the late 1960's and early 1970's became more acrimonious. Without an ever-expanding pie out of which to pay for new initiatives, battles between special interests over who would get how much of the existing pie became much sharper.

The net result of the conjunction of all of these events was disastrous for space exploration. By its very nature, space exploration is an optimistic enterprise, an undertaking for a self-confident people seeking to expand their horizons. In an atmosphere of pessimism, cynicism, and occasional revolutionary mutterings, it's a program certain at least to have a difficult time justifying itself. If one adds to this stew a disagreeable dose of economic trouble, it is easy to see that the prospects are not good.

So it became unfashionable to be for the space program. Advocates of new space initiatives were met with emotional, and therefore politically powerful, arguments that the country's resources were needed on earth, to fight poverty, ill health and hunger. Public opinion polls that ask the American people to list the programs on which they would like the government to spend more money generally show space exploration at or near the bottom of the list these days. Our political system is responsive—that attitude is recognized and embodied in lean appropriations for space every year.

And yet, the popularity of the movie "Star Wars" and "Close Encounters of the Third Kind" cannot be an accident. "Star Wars" recently eclipsed "Jaws" as the all time box office leader. Projections are that it will gross well over $200 million. "Close Encounters" seems destined for the same level of success, and I don't think that the fanaticism of fans of the former television science fiction series "Star Trek" is an unimportant phenomenon or an aberration.

The continued interest in science fiction as a form of expression is a most important feature of our mass culture. Science fiction now represents 13–14 percent of the total book market, and the field is growing. Such facts often go unacknowledged, because there are other trends that seem to contradict this interest in science.

The counter-culture inspired by opposition to the war in Vietnam was determinedly anti-materialist and anti-technology. Its influence is still evident, in the popularity of back-to-nature products such as organic foods, cosmetics, and handbooks on how to live in the woods.

But the older American love of novelty, of scientific spectaculars, of technological innovation is still vibrant. It is as much a part of the American scene as steamboats once were, or the telegraph.

Yankee ingenuity, American know-how—these are cliches that we have used to describe this strain in our lives, and it is alive and well in American popular taste, however unfashionable it may be in the more sophisticated circles that have adopted the countercultural view for their own.

So I would like to make a prediction at this point. I believe this interest in technology will in time again assert itself and we will once again be involved in space exploration and development on a grand scale.

Now that's a pretty bold prediction, and, as I warned earlier, trying to discern trends while they're actually happening is a riskier and a more controversial business than explaining away the past. So give me a chance and let me explain why I think my prediction will come to pass.

Space exploration, as I've said, is an essentially optimistic undertaking. But it is more than that. It also represents other things that historically have been very important to this country: it is a frontier; it is a challenge to the American talent for ingenious solution; and it is an enterprise of sufficient histrionic proportions that it excites the imagination.

All of these attributes are important and powerful parts of the American experience. Some historians have even suggested that it was the very fact of being a frontier country that defined our national character. Like most such historical generalizations, there is enough to this thought to make it meaningful.

Having a frontier always meant that those in this country who could not make a go of it in the established centers had an escape route, a place to which they could go and start over. There, people were judged by their ability to master a totally different environment, and a premium was placed on innovation and adaptability. We cannot realize the pervasive effects of this kind of influence on our culture until we stop and think about some of the things that are our heritage as a result.

The challenges of frontier life have always been a great spur to our creative minds. While many people may not realize it, the kind of wooden frame housing in which virtually all of us now live was first invented as a means of economizing on the amount of wood needed to build a house on the Great Plains, where no trees grew. More recently, the exploration of space has yielded us whole new digital and miniaturization technologies. Things as diverse as pocket calculators and Teflon pans are just part of our harvest from the exploration of this newest frontier. But the specific benefits are less important than the general stimulus to intellectual accomplishment that is necessarily involved in the effort to overcome the obstacles to exploration. In short, we can rarely predict what technological benefits there are to be gained in advance of the effort—but we can be sure that they will be there.

One of this country's great strengths, its diversity, was fostered by the availability of open space in which different life styles could be pursued without disruption to the society. Religiously fervent groups such as the Mormons, and various Utopian thinkers, including many socialists, were all free to move out West and flourish in a peace that they would never have been able to enjoy back East.

Dynamism, creativity, diversity—all are important national traits, and all were fostered by the availability of a place where they were valued and protected. Manifest Destiny was the slogan under which Americans proclaimed their right to territory from one seaboard to the other. "Go West, young man," is in this country a phrase that evokes adventure and opportunity.

We have not had a frontier for some time now within our own country, but the world as a whole has only recently been in the same situation. The increasing sophistication of global communications and transportation networks means that there are fewer and fewer unexplored and primitive areas. Vast tracts of land remain unexploited—that is one thing. But land marked "unknown" on a map is quite a different matter, and it is a tantalizing prospect lost to the adventurous among us only recently. As many have pointed out, outer space is the last such frontier.

Challenges to American know-how, and self-confident pleasure in meeting them, have been another casualty of the experience in Vietnam. The advantage of sophisticated weaponry, logistics, and techniques proved no match for a determined group of jungle guerillas. A little doubt—or perhaps maturity—tempers the optimism with which we now consider technological solutions to our problems.

The pursuit of historic missions is also an activity which lost much of its luster in the last battles in Southeast Asia. We are more likely now to carefully question the stirring appeal to patriotism, or blind enthusiasm for adventure. President Kennedy's speech proposing to go to the moon would sound tinny today, not stirring.

All of this is in reaction to a traumatic string of national experiences. But it cannot be a permanent state of mind. It is impossible to believe that the United States will never again enthusiastically embrace a challenge, and bring its best resources to bear in an effort to meet it. I suspect it will be done with a shade more sobriety, critical examination, and doubt than before. But that it will happen again in time is a virtual certainty.

I think that is precisely what is already beginning to happen in the case of space exploration. The popularity of science fiction is just one straw in the wind. The rise to celebrity status of a scientist whose interest is extraterrestrial biology, Carl Sagan, is another. The political clairvoyant, Governor Brown of California, recently involved himself in a Space Day celebration here on the West Coast. I don't think any of these things are accidents. I think they are the first indications that the pendulum has begun to swing back.

I don't want to sound giddy about the prospects. As a nation, we have learned a lot about our limitations from the events of the recent past. I'm sure that the new ventures that will come out of an increased attention to space will all have important practical applications.

Scientists have promised us, for example, that the use of an endless, weightless vacuum as an environment will allow us to manufacture exotic materials that cannot be easily made here on earth, to cast perfect ball bearings, and to produce new medicine with great potential. Eventually, we may find that space holds the key to our energy problem, allowing us to build orbiting power stations to generate electricity from solar energy.

Now is the time for leadership in this field. The country's mood is ripe, I believe, for an appeal to the traditional values of American exuberance. At junctures such as these, it is the role of our political and other leadership to try to sense and articulate this sort of mood.

It may be that this role is what we have in mind when we speak of leadership that has vision. Our form of government, for a variety of reasons, often suffers from a myopic preoccupation with the problems of the moment.

If there is one thing that can be said with certainty about the problems of today, it is that they will not be the problems of tomorrow. Certainly, great difficulties brought on by the historical conjunction of events are not going to go away overnight. The durability of the list of our nation's political agenda with which we began illustrates that point.

But most of the time and energy of our political leadership is too often spent on the trivia of the day. There is too little attention paid to the need to define tomorrow's agenda, to shape the direction as well as the content of our public discourse.

Perhaps I am more sensitive to this shortsighted aspect of our government because I try to insure that my own company does not fall victim to this kind of mindset. It's also possible that I sense the increased interest in space exploration sooner than most in government because I spend my time in a sector of American life, the business community, that is inherently more optimistic than others.

In any event, I look forward to recognition by our political leadership that the American appetite for optimistic leadership, instead of cynical or shortsighted management, has revived.

I think it would be a pleasure to live once again in a land where optimism and an enthusiastic struggle with difficult problems—though tempered by sad and sobbering experiences—would no longer be out of fashion. I hope you agree.

RURAL HEALTH NEEDS PLANNING ACT OF 1978

Mr. CLARK. Mr. President, yesterday I introduced, along with Senators LEAHY and ANDERSON, the Rural Health Needs Planning Act of 1978, S. 2487. We inadvertently failed to ask that the text of the bill be printed in the RECORD. Therefore, I ask unanimous consent that the text of S. 2487 be printed in the RECORD today, and to appear in the permanent RECORD following our statements of introduction that appeared on pages S1191 and 1192.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2487

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Rural Health Needs Planning Act of 1978".

NATIONAL GUIDELINES

SEC. 2. (a) Section 1501 of the Public Health Service Act (42 U.S.C. 300k–1) is amended by redesignating subsection (c) and all references thereto as subsection (d) and inserting after subsection (b) the following:

"(c) In issuing guidelines under subsection (a) when (as determined by the Secretary) the needs of isolated rural communities and other non-urbanized areas within areas served by health systems agencies cannot be adequately met by the national guidelines the Secretary shall include separate guidelines and regulations for such nonurbanized areas.".

(b) Section 1501(d) (as so redesignated by subsection (a)) is amended by striking "subsection (a)" and substituting "subsections (a) and (c)".

NATIONAL COUNCIL ON HEALTH PLANNING AND DEVELOPMENT

SEC. 3. Section 1503 (b) (1) of the Public Health Service Act (42 U.S.C. 300k–3) is amended by—

(1) inserting "the Assistant Secretary for Rural Development of the Department of Agriculture," after "Defense,"; and

(2) striking the second sentence thereof and substituting: "The remaining members shall be appointed by the Secretary and shall be persons who as a result of their training, experience, or attainments are exceptionally well qualified to assist in carrying out the functions of the Council. A majority of whom shall be consumers of health care and who are not also providers of health care and broadly representative of the population groups and subgroups including residents of non-metropolitan areas."

HEALTH SYSTEMS AGENCIES

SEC. 4. Section 1512 (c) of the Public Health Service Act (42 U.S.C. 300–1) is amended by—

(1) inserting "(1)" after "(c)";

(2) adding at the end thereof the following new paragraph:

"(2) The Secretary is authorized to make grants to health systems agencies, on the basis of the square mileage area served by such agency, for the development and operation of subarea councils. The Secretary shall adjust the amount of a grant for a health systems agency that contains a geographic barrier not reflected in the square mileage of the health service area served."; and

(3) inserting at the end of the first sentence of paragraph (1) (as so redesignated) the following new sentence: "The health systems agency shall demonstrate consideration of the views of the subarea councils.".

PLANNING GRANTS

SEC. 5. Section 1516 (b) (1) of the Public Health Service Act (42 U.S.C. 3001–5) is amended by inserting "the product of $0.10 and the medically underserved population of the health service area for which the health systems agency is designated, and" after "1515 (c) shall be".

STATEWIDE HEALTH COORDINATING COUNCIL

SEC. 6. Section 1524 (b) (1) (A) of the Public Health Service Act (42 U.S.C. 300m–3) is amended by adding at the end thereof the following:

"(iv) A majority of the members of the Statewide Health Coordinating Council shall be residents of the State and who are broadly representative of the population groups and subgroups including residents of nonmetropolitan areas.".

CENTERS FOR HEALTH PLANNING

SEC. 7. Section 1534 (c) (2) of the Public Health Service Act is amended to read as follows:

"(2) shall develop and use methods (satisfactory to the Secretary) to disseminate to such agencies and State agencies planning approaches, methodologies (including methodologies to provide for education of new board members and new staff and continuing education of board members and staff such agencies and State agencies, with special emphasis on the needs of medically underserved populations), policies, and standards.".

THE U.N.: SCRAPPING INDIVIDUAL RIGHTS FOR COLLECTIVE RIGHTS

Mr. MOYNIHAN. Mr. President, President Carter has once again stressed the importance of human rights in the foreign policy of the United States. That the President's concern is not misplaced is borne out in an especially illuminating commentary by William Korey, recently printed in the Washington Post. Mr. Korey reminds us that the vocabulary of human rights must itself be protected from those who wish to take it over for their own political purposes. I know from my own experience as Permanent Representative of the United States at the United Nations that we must remain

alert to all such endeavors. I ask unanimous consent that the text of Mr. Korey's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Washington Post, Jan. 11, 1978]

(By William Korey)

THE U.N.: SCRAPPING INDIVIDUAL RIGHTS FOR COLLECTIVE RIGHTS

A remarkable inversion of the traditional language of human rights took place, virtually unnoticed, at the past session of the U.N. General Assembly. What had been the isolated Soviet position in 1948 on the Universal Declaration of Human Rights emerged triumphant in 1977.

In 1948 Andrei Vishinsky had provided the General Assembly with a classic exposition of the Kremlin view. Human rights, said the prosecutor of the Great Purge epoch, is "a governmental concept" and "cannot be considered outside the prerogatives of governments." He called for either a year-long delay in the U.N. vote or the adoption of amendments that would have restricted individual freedoms in the interest of the state.

With the West then dominant in the General Assembly, Vishinsky's proposals were defeated. Eleanor Roosevelt, the principal architect of the Universal Declaration, predicted that the document, with its stress upon the rights of the individual, would become "the international Magna Carta of all men everywhere." And, indeed, it has.

Last month, however, the General Assembly decided that individual rights were no longer a principal concern. Two new "priorities" stressing collective and national rights were adopted. An exultant Soviet delegate welcomed the "significant" development as laying down a "new United Nations approach to human rights."

The new first priority of the world body is to combat violations of the "human rights of peoples." Apartheid, racial discrimination and colonialism headed the list of violations. But the subsequent categories were far more striking: "aggression and threats against national sovereignty, national unity and territorial integrity, as well as the refusal to recognize the fundamental rights of people to self-determination, and of every nation to exercise full sovereignty over its wealth and national resources."

The Irish delegate strongly objected to a U.N. resolution in which "collective rights must indispensably take priority over the rights of the human person." Ambassador Andrew Young, despite his sympathy for Third World aspirations, complained that "the promotion of vital rights of the individual" had been subordinated to this new "higher priority."

Western efforts to redress the imbalance went down to defeat. When an amendment was proposed that would have added the words "of individuals" to the phrase "human rights and fundamental freedoms," it was voted down 54 to 63, with 20 abstentions. Also rejected was an amendment that would have appended the words "for all, without distinction as to race, sex, color, language or religion" after reference to the "protection of rights." Nothing was said in the resolution about such gross and widespread human-rights violations as torture, killings, arbitrary arrest and detentions, and deprivations of speech, press and assembly.

The second new priority decided upon by the Assembly is "the realization of the New International Economic Order," which was held to be "an essential element for the effective promotion of human rights and fundamental freedoms." The key phrase is "an essential element." When an amendment was advanced to substitute for this phrase the words "likely to facilitate," it was rejected by a vote of 44 to 65, with 25 abstentions.

But there is an abundance of evidence drawn from the experience of numerous developing as well as developed countries that would demonstrate that higher economic standards have no necessary connection with improved human-rights conditions. Indeed, not infrequently the correlation is an inverse one. A leading specialist, Harold R. Isaacs, reecntly wrote: "Never have more 'liberated' people become more subject to more tyrannies in the name of achieving more freedom. . . ."

Besides, the New International Economic Order, however useful its purpose, has little, if anything, to do with human rights. It represents the aspiration of developing countries to restructure the world economy for their own benefit. The focus is upon benefits to be derived by Third World states, not necessarily their populations. Given the structures of most Third World countries, it is an open question whether economic benefits have raised the standard of living of more than their elites.

The new priorities reflect the interests of most Third World governments supported by the Communist bloc. Of the 33 sponsors, only three or four belong to the developed Western world. Almost three-quarters of the sponsors were authoritarian regimes of the right or left. Few sought to challenge the overwhelming majorities that could be mobilized by the geographical blocs. On the roll-call vote in the Third Committee, only 11 Western countries, including the United States, abstained. Some 126 governments were recorded as being in favor, with none opposed.

The task of fleshing out the new priorities was assigned to the next session of the U.N. Commission on Human Rights, beginning in February. Its "conclusions and recommendations" are to become the basis for programming by the General Assembly. Since the composition of the 32-member commission reflects a U.N. structure in which the Western democracies constitute an isolated minority, the possibility of modifying, let alone reversing, the current trend is severely limited. Yet the effort must be made, if only to preserve at least the essentials of Eleanor Roosevelt's handiwork.

AMBASSADOR YOUNG'S REPORT

Mr. MATHIAS. Mr. President. Representative CHARLES WHALEN of Ohio, who has served as a member of the U.S. delegation to the United Nations in the last session of the General Assembly, has called my attention to the statement delivered by U.S. Representative to the United Nations, Andrew Young, on December 21, 1977. Ambassador Young has been a lively and provocative spokesman at Turtle Bay. Whether his words evoke agreement or controversy, they carry the weight of the administration and so they are important and should be read carefully. The statement reports the Ambassador's views on the 32d session of the General Assembly. Mr. President, I ask unanimous consent to have the report printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

STATEMENT BY AMBASSADOR ANDREW YOUNG

I am pleased to say that I believe we have achieved an important and hopeful shift in the development of the General Assembly. We are drawing to a close what has been in many ways the most constructive session in many years. In this General Assembly we have seen a clearer consensus of the concerned emerge to replace some of the politics of frustration which seemed often to drive the work of the Assembly in the past.

This year we all saw an obvious change of mood, a sign that all of our governments and delegates are beginning to question the value of the slogans and cliches which have governed their activities so often during the past several years. I sense an increasing agreement that slogans lead nowhere, that purely political and tactical maneuvers in isolation from the substance not only are wasteful and damaging to this institution, but they engender unproductive confrontation which inhibits progress toward solution of the crucial problems of mankind.

In short, this has been a good Assembly. It may even have been historically important, because of progress on several fronts, but mainly because of this new will to talk together about resolving our common problems. This is a solid record that my Government values highly and a record that I intend to convey to the American people in the months ahead.

What has this Assembly accomplished, and why did this occur?

First, let us turn to the area where the UN has for 30 years borne special responsibilities for maintaining peace and security—the Middle East. This fall we saw in President Sadat's visit to Jerusalem one of the most courageous moves in the history of modern diplomacy. His action, and the response of Prime Minister Begin, have created an unprecedented opportunity. Their visit demonstrated the profound desire for peace by peoples who have undergone the devastation of four tragic wars.

On most other issues this fall, this Assembly gave the impression of being closely conscious of, and relevant to real events. But resolutions which were adopted in the Middle East tended to reflect the unhelpful rhetoric of the past rather than the refreshing and hopeful developments of the present. There seemed a very real possibility that the world was passing the United Nations by.

In all fairness, I think that the delegates and their governments may have sometimes found it difficult, because of the swift pace of developments, to reflect in New York the dynamic new possibilities for progress in the Middle East.

Despite the unreality of some of these debates, the role of the United Nations as an institution in Middle East affairs remained important and constructive. We must all keep this in mind, as the Secretary General did when he called on Prime Minister Begin to discuss the contribution the UN can make to the peace process. UN peacekeeping efforts for many years now have helped provide the breathing space which is necessary to permit the parties concerned to hammer out the terribly difficult but essential decisions which must be taken if we are to have an enduring peace—at long last—in the Middle East.

Amidst the headlines this fall, a fact overlooked was that the Security Council renewed without controversy the mandate of the Disengagement Observer Force in the Middle East, a process that in the past has been drawn-out and painful. Nor did the world or the media focus on the fact that General Assembly approval of funding for the Middle East was routine and non-controversial.

Nor did the public place sufficient importance on the UN role this fall in enabling intensive consultations to take place among the leaders of the governments principally concerned with a Middle East settlement. This included the opportunity for US and Soviet foreign ministers to further their talks on this subject. All of these developments helped prepare the way for the kind of agreements on meaningful measures which are

required for the ultimate settlement we all desire in the Middle East.

An important part of the new atmosphere in this General Assembly was engendered by what my Government considers to be significant movement of the UN community toward a new degree of consensus on the common goals in the southern African issues. I am proud that my Government and the people of the United States have drawn closer in association and cooperation with our African friends. The world community is virtually unanimous in its support for the goals of liberation of the people in southern Africa. There are few who would reject the work that has been launched to guarantee freedom, independence and self-rule for all of the people of this region. My Government is committed to this monumental task.

In Rhodesia, we have been sharply aware of the breathing room granted the UK-US effort by the way the General Assembly treated this problem in all its debates, in Committee as well as Plenary. We also understand and accept the significance of the postponement of further debate in the Security Council.

The tragic actions of the Government of South Africa this fall sparked a justifiable explosion of protest from around the world that found its expression in this Organization through the unanimous decision of the Security Council to impose mandatory sanctions on South Africa—the first time sanctions under Chapter VII of the Charter have been imposed on a member state of the UN. This was a true consensus. It was an historic step forward by the UN in its long effort to achieve freedom and human dignity in Africa.

On economic and social issues, we have reached two important milestones rooted in consensus. We have achieved agreement on a mechanism to oversee the continuing dialogue between the industrialized and the developing nations. Many thought we would not be able to come to terms on even the procedure for carrying on this dialogue—for we had failed numerous times in the past—but we were able to carry it off. In addition, after a two-year study on restructuring of the economic and social functions of the United Nations, we reached agreement on some highly significant changes that should clearly improve the efficiency and effectiveness of these operations and ensure that the delivery of services of the UN agencies to the world's poor is greatly enhanced.

We have also made some progress on human rights. This was the Assembly at which the President of the United States signed the Covenant on Economic and Social Rights and the Covenant on Civil and Political Rights. It was the Assembly at which broad co-sponsorship of the proposal to create the position of High Commissioner for Human Rights reflected support in most geographic regions, even though ultimate passage was not possible this year. This was also the Assembly at which delegations from a number of regions made significant human rights proposals. I think we have taken important steps toward achievement of more awareness and agreement on action in this sensitive but critical field than we have ever had. At the same time, we have much work to do.

One of the most encouraging things about this fall's General Assembly was the extent of agreement we reached on arms control issues. On a comprehensive test ban, for example. the key resolution commanded very broad support—not only from the Soviet Union and the United States, but also from almost all of the nonnuclear nations. On non-proliferation, there was a genuine readiness to exchange views seriously and to develop an acceptable resolution that recognizes the broad responsibility of all nations not to contribute to proliferation. Resolutions calling for nuclear free zones in Africa, the Middle East and South Asia commanded strong acceptance, and my Government was pleased to be able to support them. And both the U.S. and the Soviets were to vote for a resolution endorsing goals in the Strategic Arms Limitation Talks.

The action of this Assembly in adopting by consensus—I emphasize by consensus—a resolution on aircraft hijacking was a particularly significant achievement of this session, making the world's airways safer for peoples of all nations.

In addition, this fall negotiations in the UN have made substantial progress toward establishing a joint committee on missing persons in Cyprus, a positive indication that there is willingness on both sides to resolve differences through negotiation. We have taken steps to support the important recommendations of the International Civil Service Commission for improvements in the staffing of the United Nations. We have expanded the UN membership as we work toward the ultimate goal of universality. We reached a consensus resolution on Guam and avoided the confrontational resolutions of the past.

The reasons for this quite positive record are many. I do not need to recite them to delegates here, but I believe it is particularly important for people outside this body to focus on them.

First, I think, is the emerging agreement that the time for opportunism on many issues before the UN is passing. The issues are too pressing, the dangers too great. This year's Assembly gives us more hope that this body has taken a new and positive course. While we clearly cannot agree on all precise policy prescriptions, there is growing agreement that it is incumbent on all of us to advance serious proposals for dealing with critical issues.

Second, there is, I believe growing agreement among members that the developed and the developing countries have fundamental, long-term interests that converge more often than they diverge. In my own country, for example, changes of policy have resulted in deeper interest in the problems of southern Africa, progress on a Panama Canal treaty, renewed concern about human rights, and closer relations with many countries in the developing world. There are differences, to be sure, and some are hard to bridge. But for all nations—large and small—it is increasingly absurd to refuse to recognize the impact we all have on one another.

On economic issues, for example, my country, which has historically been oriented toward our industrialized trading partners, now finds that the developing nations constitute its fastest growing markets and continue to be a prime source of many of its raw materials. So we find that all regions are of growing importance to America's welfare and interests. In turn, the developing countries are finding that the industrialized societies offer indispensable markets, needed capital and vital technical assistance. Increasingly, we have to understand jointly that our task is not to pressure one another—both sides, after all, are quite capable of resisting pressure—but to find a much better process to help both sides to discern and develop their common interests in cooperation. This is why the agreement of this Assembly to an overview mechanism for the North-South dialogue is so critical.

Third, and this will be disputed by some, although I strongly believe it is true—we are moving toward a more widely shared set of common values and interests. Thirty years ago, few in the developed world cared one way or the other about economic or social conditions in the developing nations. In that period, few in the developing countries realized that internal domestic policies of the industrialized countries could have such significant impact on economic conditions in their own far away lands. Today there is an intense international debate about the best means for achieving a new international economic order which will be more just and healthy. The question is not whether we should do this, but how.

Fourth, and the world largely ignores this—effective new forms of decision-making have been employed in compiling our records at this General Assembly. One is the important development of small-group techniques of reaching agreement on potentially divisive issues. So-called "contract groups" consisting of representatives of the various interest groups, or "friends of the chairmen" of larger committees, have been able to make important progress in informal sessions.

The other major procedural technique that deserves mention is that of consensus decision-making. The public tends to focus on disagreements among us, but over the past two years about 63 percent of the decisions in the General Assembly have been taken by consensus. Although important differences are sometimes inappropriately covered over by consensus decisions, in most cases the differences have been so narrowed by intensive negotiation and debates that it is not even necessary to take a vote on these issues. Consensus decisions during the current Assembly have, I believe, been even more frequent than last year.

If we are striking a more constructive and cooperative tone in the conduct of our deliberations here, I do not mean to suggest that we be complacent. We have a difficult agenda facing us in the 12 months ahead.

On the vital issues of maintaining the peace, first of all, we must keep the momentum going. Almost all of us agree that the time is right for movement. We must maintain that consensus, and this is only possible by continuing our efforts to clarify the issues and achieve agreements on the problems that threaten us all.

In the Middle East, let us build on the historic steps already taken, abandon destructive positions, and seize an unprecedented opportunity for peace. Let us set our minds, in the intersessional months ahead, to contribute our ideas, our information, and our wisdom in conducting the affairs of the UN to support the moves toward peace.

In Cyprus, now that the parties have moved close to agreement on one important issue, the committee on missing persons, let us in the United Nations maintain the momentum to broaden the areas of agreement and reach a lasting settlement.

In Rhodesia, the supportive consensus created here by this body has undoubtedly played a major role in bringing Ian Smith to understand that he must step down in favor of a legitimate majority government elected by the people of Zimbabwe. We continue to believe that the initiative which the United States has been pursuing in support of the United Kingdom remains the best framework for an internationally acceptable transition to majority rule. Let us continue to work together to bring about the necessary peaceful conclusion to this effort.

In Namibia, the five Western ambassadors have just completed another round of talks with the Front Line states, SWAPO, Nigeria and South Africa. The differences between the parties have been narrowed considerably over the last several months since our contact group began functioning. But the remaining issues stubbornly resist final agreement between the parties. Let us continue to work together in pursuance of an internationally acceptable settlement which will lead to true self-determination and independence for the people of Namibia.

In South Africa itself, let us build on the new consensus—not merely on the utter unacceptability of apartheid, but also on the need to convince South Africa to move in a

progressive direction. The consensus of the world community is more solid and sweeping than ever before. Let us make clear that our goal is not to isolate South Africa but to encourage the kind of meaningful social change that can bring full participation by all South African citizens in their own governance and national life.

Next year we will mark the 30th anniversary of the signing of the Universal Declaration of Human Rights. Its adoption was accomplished at a very early stage of the life of this Organization. It was virtually our first priority in those days. While there has been some progress in human rights since then, we still have a long way to go. There are still far too many abuses. As we mark this significant anniversary, let us restore to high priority this Organization's concern for human rights and let us resolve that next year's General Assembly will be a high point for constructive collective action to advance this vital cause.

Next year will also provide us with a significant opportunity for progress on arms control issues. Our Special Session on Disarmament next May and June is unprecedented. Never before has the UN sponsored a gathering of this magnitude on this subject. Never before have we had a chance to concentrate the attention of all nations on these life-and-death questions in this way. This is no longer a concern of only the nations of the East and West. The developing countries, the non-nuclear countries—indeed all countries—have an important stake in these discussions. Let us all pledge to work within our governments to make a major effort to bring this Special Session successfully to meaningful understandings and practical ways to enhance our disarmament goals.

This session of the Assembly was another major step in the improved economic dialogue between the developing countries and the industrialized countries. As the resumed 31st session of this Assembly ended, just prior to the opening of this one, it was clear to all that a major task would be to find a mutually acceptable framework for the continuation of high-level overview of economic cooperation within the United Nations system. The 32nd General Assembly has met this challenge; let us all work for constructive discussions in the Committee of the Whole we have agreed upon.

For the US, expectations will be high. If the construction of a new international economic order is to be a growing consensus and not a verbal contest, each group of countries—East and West, oil producers and consumers, industrialized, industrializing and agricultural—must explore ways in which change can be achieved consistent with economic security for all. We know each others' needs and concerns. We have learned even more about them during this Assembly. Let us get on with the work that remains to be done.

In many areas once characterized by disagreement, we have achieved consensus. In others, we have thus far failed. One area in which more work remains to be done relates to the negotiations for a common fund under the auspices of UNCTAD. The suspension of the negotiations in Geneva took place rather late in our session; with so much else under way, it was certainly a difficult task for all of us here in New York to provide a real impetus for their constructive resumption.

Unfortunately, we were not able to reach agreement on a resolution which would have facilitated resumption of the negotiations. As you know, Mr. President, we worked towards a resolution in the Second Committee last week that would have permitted the negotiations to be resumed on a constructive basis. Regrettably, it was not possible to achieve a positive non-prejudicial statement. Let us therefore work together to find a way to minimize polemics and to conduct a balanced and dispassionate assessment of the important issues involved. We believe that such an assessment is necessary before any further progress can be made

Let me mention one final area that merits urgent attention next year. The budget we have just approved is nearly a 30 percent increase over that of the last biennium. We have approved many good programs and projects. Indeed, nearly all of them are good. But the UN's resources are not unlimited. I think it is fair to say we are sponsoring too many conferences, too many special interest programs, too many "private bills" of assistance in individual countries when such steps should be reserved for only the most critical cases. I will be the first to admit that my Government has not always followed a policy of fiscal restraint itself. But the need for fiscal stringency is paramount. It applies to all of us. We need to get priorities, carefully analyze all proposals, clarify our objectives, and restrain ourselves on expenditures until we have sorted out for ourselves exactly which actions are the most pressing. A consensus resolution of this Assembly last year expressed concern about this problem and requested the assistance of the Secretary General in identifying expenditure priorities. The UN system budget was $124 million in 1947. It was nearly $2.5 billion in 1976. These are significant sums which we all know can—with proper programming and management—be better used. Let us commit ourselves to this task in the coming year.

In short, we have a difficult agenda before us. The problems do not vanish with the sound of the last gavel. But with the consensus of the concerned that has clearly emerged at this year's General Assembly, we have begun to search for the common elements of our own interests, to stop shouting and to do more listening.

A senior official of another government told me early in this Assembly that the United Nations seemed to be catching its "second wind." I think that is clearly true. This emerging consensus on how to work together on world issues provides us all with a source of new hope and optimism. That is good for the United Nations. It is good for the world. It is good for the people we represent.

In closing, Mr. President, I would be remiss and would not reflect the strong view of my Government if I did not speak directly about the superlative manner in which you have managed the difficult business of this Assembly over the past three months. You have been a superb President in a line of outstanding statesmen and your Assembly has one of the most constructive and positive records of any Assembly in many years.

My delegation also wishes to express appreciation to the Secretary General, who once again this year has provided the United Nations with devoted and energetic leadership. We have missed Mrs. Waldheim's presence this fall and offer to you, Mr. Secretary General, and all the members of your family, our sincere hope that you can be united with your family as soon as possible. Finally, Mr. President, through you I would like to thank Under-Secretary Buffum and all the devoted members of the Secretariat Staff for their warm support and hard work, which obviously have played an essential part in the achievements of this Assembly.

PAY MORE, GET LESS

Mr. EAGLETON. Mr. President, I recently introduced a bill (S. 2459) to allow individual taxpayers a 15-percent tax credit against their social security taxes. I intend to offer the measure as an amendment to the President's tax reduction and reform package when it gets to the Senate.

The purpose of the amendment is to channel that part of the tax cut which is designed to lessen the impact of higher social security taxes to those who actually pay the payroll taxes. Last week, the Chairman of the President's Council of Economic Advisers testified that social security taxes will increase from $7 to $7.5 billion in both 1978 and 1979. There is no justification for giving the compensating portion of the tax reduction to the roughly 20 million taxpayers who do not contribute to social security. My bill would prevent that.

Mr. President, there is one school of thought asserting that those who are paying the higher social security taxes will be getting higher benefits in return, and therefore do not merit any special tax consideration. That is simply not the case. Last year's social security legislation not only increased the payroll taxes but also made other changes which will result in a significantly lower level of benefits. According to a Wall Street Journal article of February 6, 1978, a 25-year-old earning $10,000 this year formerly could plan on a social security retirement equal to 83 percent of his preretirement income. Under the new legislation his benefits will equal only 46.7 percent of his final pay. So, he pays more and gets less. Mr. President, I ask unanimous consent that the tax table of the Wall Street Journal article written by Donald Moffitt be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

[As a percentage of final pay]

Year[1] of retirement	1978 earnings					
	$10,000		$20,000		$30,000	
	Old law	New law	Old law	New law	Old law	New law
1978	52.4	52.4	31.9	31.9	21.2	21.2
1983	58.1	48.4	35.4	30.3	23.6	20.6
1988	61.1	48.0	37.2	30.9	24.8	21.4
1998	66.1	47.7	41.6	32.1	27.7	22.0
2008	74.8	47.6	47.0	33.6	31.4	24.7
2018	38.0	46.7	51.2	34.0	34.1	25.5

[1] Year of retirement.

Note: Retirement is at age 65. "Final pay" is the average yearly pay for the 5 yrs. before retirement. Assumed inflation: 4 percent a year in cost of living and 5 percent a year in pay.

TRIBUTE TO JOHN McCLELLAN

Mr. MOYNIHAN. Mr. President, I join my colleagues in honoring the memory of John McClellan, so long a force in the U.S. Senate. Indeed, it is remarkable to note that he served in this body for some 35 years, a span of time once reckoned to be a full generation, but, in our day, a period which must be seen as encompassing several generations. If we think of our Nation's political history since 1943, if we consider the transformation of international politics in the same period, can we recall an era more challenging, more taxing, more demanding of the resources of our legislators?

Senator McClellan was a man of remarkable stamina and acuity, a Senator who could grasp the importance and the complexities of the rapid changes in our national life. He was, as we know, a man

who knew great tragedy in his personal life; his ability to persevere strikes me as all the more impressive on that account.

Everyone, of course, has his own remembrance of the important political figures of his time. I recall especially the role of Senator McClellan some 25 years ago, when the country was in the midst of an important crisis of political confidence. It was a time when some people sought to appropriate legitimate patriotic concerns for political purposes of their own, a time of reckless political accusation. It fell to Senator McClellan to set a standard of political decency and courage and his role at that juncture will not soon be forgotten. I do not think that I could have imagined that I would, someday, come to the Senate myself and serve alongside him. I was privileged to do so for 1 year, and greatly regret that I had not the opportunity to serve with him, and learn from him, longer. Through his prodigious efforts, Senator McClellan has made an indelible impression on the history of the United States in our time and, through his embodiment of the elemental virtues, he made an indelible impression on one much younger than he, who now has the privilege of continuing to work in this body. We are diminished by his death, but we are inspired by his memory.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. KENNEDY, I ask unanimous consent that the Senate proceed into executive session for 1 minute.

There being no objection, the Senate proceeded to the consideration of executive business.

Mr. KENNEDY. Mr President, I call up the nomination of David Mazzone for the Federal district bench, reported earlier today.

The PRESIDING OFFICER. The nomination will be stated.

THE JUDICIARY

The assistant legislative clerk read the nomination of A. David Mazzone, of Massachusetts, to be U.S. district judge for the District of Massachusetts.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the President be notified of the confirmation of the nomination.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was considered and confirmed.

Mr. KENNEDY. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to the consideration of legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS UNTIL 9:30 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 9:30 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR EAGLETON AND SENATOR LEAHY TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, after the prayer and the disposition of the approval of the Journal tomorrow, Mr. EAGLETON be recognized for not to exceed 15 minutes and that Mr. LEAHY be recognized for not to exceed 15 minutes prior to the orders for the recognition of eight other Senators, such orders having already been entered.

The PRESIDING OFFICER. Without objection, it is so ordered.

PANAMA CANAL TREATIES

AMENDMENTS NOS. 20 AND 21

Mr. ROBERT C. BYRD. Mr. President, today I am submitting on behalf of the distinguished minority leader, Mr. BAKER, the distinguished chairman of the Foreign Relations Committee, Mr. SPARKMAN, the distinguished ranking minority member of the Foreign Relations Committee, Mr. CASE, the distinguished minority whip, Mr. STEVENS, the distinguished majority whip, Mr. CRANSTON, and 72 other Senators, making a total of 78 Senators, two amendments to the Panama Canal treaties which we feel represent a fundamental and essential improvement in strengthening the documents.

Since I first had the opportunity to review the treaties in September, it has been apparent to me that it would be necessary to clarify and guarantee two very important points:

First. The right of the United States to take action to defend the canal and to assure that it will remain open after the year 2000 for neutral use; and

Second. Expeditious, or "head-of-the-line," passage through the canal for U.S. military vessels in time of need or emergency.

The critical importance of these two issues clearly emerged in the hearings on the treaties before the Foreign Relations Committee.

A detailed study of the treaties, the public debate across the Nation, and a careful analysis of the hearings, have led us to conclude that articles IV and VI of the Neutrality Treaty should be amended accordingly.

We feel article IV should be amended to insure that the United States shall have the unchallenged right to take action on its own, if necessary, to defend the canal against any aggression directed against the canal or the peaceful transit of vessels.

Furthermore, article VI should be amended to provide that U.S. war and auxiliary vessels shall have the unquestionable right in the case of emergency or need to go to the head of the line in order to transit the canal rapidly.

These two amendments will formalize into the test of the treaties, if these amendments are adopted, the statement of understanding agreed to by President Carter and by Gen. Omar Torrijos, the Panamanian leader, October 14, 1977.

It is important that this statement of understanding was agreed to and publicized in General Torrijos' televised address to his people prior to the October 23, 1977, Panamanian plebiscite on the treaties.

Mr. President, these amendments have the bipartisan endorsement of the Senate leadership, together with Senator SPARKMAN, chairman of the Foreign Relations Committee, and Senator CASE, ranking member of the committee, as well as the cosponsorship of 74 others of our colleagues, as I say, making a total of 78 Senators who are sponsoring these amendments.

It is our belief that these two amendments will clear up any uncertainty surrounding the critical issues of the United States' right to defend the canal, as well as priority passage through the canal in time of emergency or need.

Mr. President, in addition to these 78 sponsors of this amendment, there are Senators who have indicated that they will support the amendment but for various reasons of their own they preferred not to join at this time as cosponsors of the amendments.

Mr. President, I send the amendments to the desk and I ask unanimous consent that they be printed in the RECORD as in executive session and that the list of cosponsors also be shown.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD (for himself, Mr. Allen, Mr. Anderson, Mr. Baker, Mr. Bartlett, Mr. Bayh, Mr. Bentsen, Mr. Biden, Mr. Brooke, Mr. Bumpers, Mr. Burdick, Mr. Case, Mr. Chafee, Mr. Chiles, Mr. Church, Mr. Clark, Mr. Cranston, Mr. Danforth, Mr. DeConcini, Mr. Domenici, Mr. Durkin, Mr. Eagleton, Mr. Ford, Mr. Garn, Mr. Glenn, Mr. Goldwater, Mr. Gravel, Mr. Hansen, Mr. Hart, Mr. Haskell, Mr. Hatch, Mr. Paul G. Hatfield, Mr. Hathaway, Mr. Heinz, Mr. Hollings, Mr. Huddleston, Mrs. Humphrey, Mr. Inouye, Mr. Jackson, Mr. Javits, Mr. Kennedy, Mr. Laxalt, Mr. Leahy, Mr. Lugar, Mr. Mathias, Mr. Matsunaga, Mr. McClure, Mr. McGovern, Mr. Metzenbaum, Mr. Morgan, Mr. Moynihan, Mr. Muskie, Mr. Nelson, Mr. Nunn, Mr. Packwood, Mr. Pearson, Mr. Pell, Mr. Percy, Mr. Randolph, Mr. Ribicoff, Mr. Riegle, Mr. Roth, Mr. Sarbanes, Mr. Sasser, Mr. Schmitt, Mr. Schweiker, Mr. Sparkman, Mr. Stafford, Mr. Stevens, Mr. Stevenson, Mr. Stone, Mr. Talmadge, Mr. Thurmond, Mr. Tower, Mr. Wallop, Mr. Weicker, Mr. Williams, and Mr. Young) submitted two amendments intended to be proposed by them, jointly, to Executive N, 95–1, the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal.

AMENDMENT No. 20

At the end of Article IV, insert the following:

"A correct and authoritative statement of certain rights and duties of the Parties under the foregoing is contained in the Statement of Understanding issued by the Government of the United States of America on October 14, 1977, and by the Government of the Republic of Panama on October 18, 1977, which is hereby incorporated as an integral part of this Treaty, as follows:

" 'Under the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal (the Neutrality Treaty), Panama and the United States have the responsibility to assure that the Panama Canal will remain open and secure to ships of all nations. The correct interpretation of this principle is that each of the two countries shall, in accordance with their respective constitutional processes, defend the Canal against any threat to the regime of neutrality, and consequently shall have the right to act against any aggression or threat directed against the Canal or against the peaceful transit of vessels through the Canal.

" 'This does not mean, nor shall it be interpreted as, a right of intervention of the United States in the internal affairs of Panama. Any United States action will be directed at insuring that the Canal will remain open, secure, and accessible, and it shall never be directed against the territorial integrity or political independence of Panama.' "

AMENDMENT No. 21

At the end of the first paragraph of Article VI, insert the following:

"In accordance with the Statement of Understanding mentioned in Article IV above: The Neutrality Treaty provides that the vessels of war and auxiliary vessels of the United States and Panama will be entitled to transit the Canal expeditiously. This is intended, and it shall so be interpreted, to assure the transit of such vessels through the Canal as quickly as possible, without any impediment, with expedited treatment, and in case of need or emergency, to go to the head of the line of vessels in order to transit the Canal rapidly."

Mr. ROBERT C. BYRD. And Mr. President, the amendments will be printed overnight, will they not?

The PRESIDING OFFICER. The Chair advises that it will be.

Mr. ROBERT C. BYRD. I thank the Chair.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, I should think that the program tomorrow would be about as follows:

The Senate will convene at 9:30 a.m. and after the prayer and the disposition of the approval of the Journal, a total of 10 Senators will be recognized under the orders previously entered, each for not to exceed 15 minutes, and this should run until about 12 o'clock noon.

At the hour of 12 o'clock noon, or upon the conclusion of the orders for recognition of the 10 Senators, whichever is later, the Senate will vote by rollcall on the adoption of the conference report on the Endangered American Wilderness Act of 1978, H.R. 3454, without prior debate thereon or motions, and upon the disposition of that vote the Senate will go into executive session, under the order previously entered, and will proceed immediately to the consideration of Executive N, 95th Congress, first session, the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal.

I anticipate that following that point on tomorrow most of the day will be taken up by speeches made by proponents and opponents of the treaty, and I also anticipate that on Thursday and Friday most of both days will be consumed in debating the treaty with those in opposition and those in support of the treaties speaking throughout Thursday and Friday, and I anticipate that the length of those debates during those sessions should be perhaps 6 hours tomorrow, give or take a little, as to Thursday probably 7 or 8 hours, and as to Friday 6 or 7 hours should be sufficient. Of course, motions will be in order and amendments to the treaty will be in order as the Senate proceeds article by article to debate the treaty.

So rollcall votes could occur, as I say, in connection with the treaties, amendments, and/or motions in relation to the same, but I imagine that most if not all of the 3 days will be given to debate of the treaty.

Mr. President, it may very well be that other matters can be taken care of as we go along but only in the event that they are matters of an emergent nature or of an uncontroversial nature or in the event very brief time agreements can be worked out in relation to such matters so as not to consume much of the time of the Senate, it being desired that most of the time of the Senate be given to the action on the treaties.

Now, that is about all I will say at this point. As to the determination of what constitutes an emergent matter, this will depend upon the matter itself and can await such time as we are confronted with those situations.

RECESS UNTIL 9:30 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order previously entered, that the Senate stand in recess until the hour of 9:30 a.m. tomorrow.

The motion was agreed to; and at 7:12 p.m. the Senate recessed until tomorrow, Wednesday, February 8, 1978, at 9:30 a.m.

NOMINATIONS

Executive nominations received by the Senate February 7, 1978:

DEPARTMENT OF STATE

John P. Condon, of Oklahoma, a Foreign Service officer of class 1 to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Dominion of Fiji.

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

James Patrick Walsh, of the District of Columbia, to be Deputy Administrator of the National Oceanic and Atmospheric Administration, vice Howard W. Pollock, resigned.

CONFIRMATION

Executive nomination confirmed by the Senate February 7, 1978:

THE JUDICIARY

A. David Mazzone, of Massachusetts, to be U.S. district judge for the district of Massachusetts.

EXTENSIONS OF REMARKS

PANAMA CANAL

HON. JOHN KREBS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. KREBS. Mr. Speaker, regardless of where my colleagues stand on the Panama Canal ratification issue, I felt they would be interested in the following ariticle, which appeared in the February 2 edition of the Los Angeles Times, by William F. Buckley, Jr., whose impeccable conservative credentials cannot even be questioned by Ronald Reagan:

PANAMA: FOR THE RECORD

(By William F. Buckley, Jr.)

In Ronald Reagan's remarks opposing the passage of the Panama Canal treaties, he gave voice to a number of specific criticisms that turn up in much of the antitreaties literature. They are of general interest, to the extent that the 51% of the people opposed to the treaties rely on these criticisms in passing judgment.

Said Reagan: "We're asked to turn over a $10 billion investment" to the Panamians.

Really, there is no reason to exaggerate our generosity, though it is legendary. The original cost of all nonmilitary property, equipment, facilities, and other improvements contemplated to be turned over to Panama by the year 2000 is $1.6 billion; by the year 2000, the estimated book value will be down to approximately $0.62 billion. The estimated cost of the military installations in Panama (including improvements) scheduled to be turned over by the year 2000 is $398.4 million. The total, in other words, is about $1.02 billion, or a modest one-tenth of the cited figure.

Said Reagan: "(We would place) the U.S. military under the jurisdiction of a government, not elected by the Panamanian people."

In fact, the American military will remain under the command of the U.S. President and, under his direction, can act unilaterally.

Said Reagan: "We will pay the Panamanian government about a billion and a half dollars to take the canal off our hands."

Not exactly: The payments to Panama will be paid by canal users out of operating revenues. That is different from tax dollars.

Said Reagan: "We're dealing with a Panamanian government that has accumulated the highest per-capita debt in nine years of any nation in the world."

Would that it were so. The total Panamanian government debt is about $1.2 billion (the IMF figure for June, 1976). With a population in Panama of 1.6 million, Panama has then a per-capita debt of about $720. Ours, per capita, is $3,300. Gen. Omar Torrijos may be a spendthrift, but he can't match our Congress.

Said Reagan: "We bought in fee simple all the privately owned land in the Canal Zone, and I've seen the figure of those purchases set at $163 million."

In fact, the total payment to private persons for interest in real property was less than that. Namely, about $4 million.

Said Reagan: "Panama derives one-fourth of its gross national product from the canal."

The correct figure is about 12%.

Said Reagan: "In the neutrality treaty, in the event of war, our enemies have the same right of access to the canal that we have."

Technically, that's right. But the treaty's neutrality extends to an area three or four miles out from the actual opening of the canal. If our enemies are so dumb as to head for the canal, our Navy or our Air Force will sink them—just like that! Our only commitment is not to sink them while they are *inside* the canal. This presumably we would not want to do in any case, as it would make it extremely messy for our ships to move past theirs. A historical note: during the past two world wars, no enemy ship used the Panama Canal. No feature of the proposed treaties impinges on U.S. rights outside the mile or two that lead into the canal.

On the whole, Reagan used perfectly defensible arguments and figures, and the above corrections may not weigh decisively in the mind of anybody, but it's a crazy world. There are people going around—I mean grown people—saying that the whole Panama Canal treaty revision is a plot involving Presidents Eisenhower, Kennedy, Johnson, Nixon, Ford and Carter, the State Department, the Joint Chiefs of Staff and the majority of the Senate to bail out of couple of U.S. banks that lent too much money to Panama. That's the right wing's Grassy Knoll.

PRESIDENT CARTER DEAD WRONG ON HIS "FIRESIDE FACTS" ON PANAMA CANAL ZONE

HON. GENE SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. SNYDER. Mr. Speaker, in his fireside chat on February 1, the President said:

We do not own the Panama Canal Zone—we have never had sovereignty over it. We have only had the right to use it * * * From the beginning we have made an annual payment to Panama to use their land. You do not pay rent on your own land. The Canal Zone has always been Panamanian territory. The U.S. Supreme Court and previous American Presidents have repeatedly acknowledged the sovereignty of Panama over the Canal Zone.

The Supreme Court has never ruled that Panama was or is sovereign over the Canal Zone. In fact, the Court has stated the precise opposite:

In the 1907 decision, *Wilson* v. *Shaw* 204 U.S. 24, the Supreme Court cited the plaintiff's contentions. Among them:

He contends that whatever title the Government has was not acquired as provided in the act of June 28, 1902, by treaty with the Republic of Colombia * * * Further, it is said that the boundaries of the zone are not described in the treaty * * *.

The Court declared:

A short but sufficient answer is that subsequent ratification is equivalent to original authority. The title to what may be called the Isthmian or Canal Zone, which at the date of the act was in the Republic of Colombia, passed by an act of secession to the newly formed Republic of Panama * * * A treaty with it, ceding the Canal Zone, was duly ratified. 33 Stat. 2234. Congress has passed several acts based upon the title of the United States * * *.

It is hypercritical to contend that the title of the United States is imperfect, and that the territory described does not belong to this Nation, because of the omission of some of the technical terms used in ordinary conveyances of real estate * * *.

Alaska was ceded to us 40 years ago, but the boundary between it and the English possessions east was not settled until within the last two or three years. Yet no one ever doubted the title of this republic to Alaska.

I call to your attention that the Court used the words "cede" and "title" in reference to both Alaska and the Canal Zone—and used the same words in the same decision.

In the 1916 case, *Gideon Dixon et al.* v. *George W. Goethals et al.* 242 U.S. 616 the Court affirmed the judgment of the District Court, Canal Zone, 1915. That opinion, in part, reads as follows:

The plaintiffs in the above-entitled cause seek an injunction restraining defendants from the forcible seizure and destruction of their properties pending proceedings before the Joint Commission to determine the value thereof, and the payment of the amounts therefor.

The theory advanced by the plaintiffs in support of their application is that in cases of expropriation of private property for public use upon the Canal Zone, injunction should issue to prevent the dispossession of the owner until he receives compensation for his property as required by the Constitution and laws. In support thereof they relay upon the provisions of the Constitution of the Republic of Panama which were in force and effect at the time of the ratification of the treaty between the United States and the Republic of Panama which were in force and effect at the time of the ratification of the treaty between the United States and the Republic of Panama. The provisions of the Panama Constitution in question are as follows:

"For serious reasons of public utility, defined by the legislator, forcible alienation may take place by means of a judicial order, and indemnity shall be paid for the value of the property before the expropriation takes place."

Also:

"The private interest will give way to the public interest. But the expropriation which it is necessary to make, requires previous and full indeminization".

And also:

"For important reasons of public utility, defined by the legislator, there can take place the forced alienation of property or rights under judicial writ, but the payment of the declared value will be made before the dispossessing the owner of same."

And the conclusion which the plaintiffs' counsel reaches is that the inhabitants of the Canal Zone have not lost any of the guaranties of the Constitution of Panama and that in so far as these constitutional guaranties are abrogated or infringed by the treaty, that such provision of the treaty are unconstitutional and void.

It is their contention that a treaty can not grant, convey, or barter rights of the citizens which are protected by constitution and that treaty provisions in contraventions of preexisting constitutional guaranties have no binding force or effect. Generally speaking, this proposition may be conceded, but it must be equally conceded that where a government by treaty, parts with the sovereignty of a part of its possessions, that the new sovereignty is equally empowered to legislate therefor without regard to preexisting laws or constitutions.

The district judge then backstopped this statement by quoting in full article III of the 1903 treaty.

In *United States* v. *Husband R. (Roach)*, 453 F. 2d 1054 (5 Cir. 1971); cert. den. 406 U.S. 935 (1971) the circuit court declared: "The Canal Zone is an unincorporated territory of the United States."

Ownership is something totally different from sovereignty. There is no question but that even under Panamanian law the United States owns the canal as an installation built on the real estate at a cost of hundreds of millions of dollars. Even if Panama had not ceded the zone to the United States, as the Court has ruled it did, the United States has clear title to hundreds of square miles of real estate in the zone acquired by purchase at a cost of millions from the old French canal company, the Panama Railroad Co. and individual owners of private tracts of land.

The President was dead wrong on the matter of the annuity. The facts are these:

The Hay-Herman Treaty of 1903 between the United States and the Republic of Colombia, never ratified by the latter, states in article XXV:

"As the price or compensation for the right to use the zone granted in this convention by Colombia to the United States for the construction of a canal, together with the proprietary right over the Panama Railroad, and for the annuity of two hundred and fifty thousand dollars gold, which Colombia ceases to receive from the said railroad, as well as in compensation for other rights, privileges and exemptions granted to the United States, and in consideration of the increase in the administrative expenses of the Department of Panama consequent upon the construction of the said canal, the Government of the United States binds itself to pay Colombia the sum of ten million dollars in gold coin of the United States on the exchange of the ratification of this convention after its approval according to the laws of the respective countries, and also an annual payment during the life of this convention of two hundred and fifty thousand dollars in like gold coin, beginning nine years after the date aforesaid * * *.

The identical financial features of this article were incorporated in article XIV of the Hay-Bunau Varilla Treaty with Panama. Clearly, we could not offer less to Panama than already offered to Colombia.

The annuity therefore was to indemnify for loss of income from the Panama Railroad, and never was a lease payment.

Subsequent increases in the annuity were made in the 1936 and 1955 treaties. Both treaties spell out that the increases were not required by any treaty provision.

The annuity was increased in the 1936 treaty to $430,000. Senate Report No. 2375, dated June 27, 1956, from the Committee on Interstate and Foreign Commerce explained this:

". . . the monetary agreement with the Republic of Panama of June 20, 1904, provided for payment of the annuity in gold balboas. Hence, when the American gold dollar, and later the Panamanian balboa, were devaluated as the result of abandonment of the gold standard by the United

States in 1934, the annuity payment in gold balboas was increased to $430,000 solely to compensate for the decrease in gold content of the balboas."

The 1955 treaty increased the annuity to $1,930,000 purely as an act of generosity on our part.

Subsequent devaluation of the dollar has raised the figure to $2,328,200 at the present time.

Ambassador John M. Cabot, Chief U.S. negotiator of the 1955 Treaty with Panama, wrote the Washington Post May 15, 1976, and on the matter of the annuity stated:

Historically these payments were to be made in return for our taking over the formerly Colombian interest in the Panama Railroad.

President William Howard Taft, in a memorandum issued together with his signing of the Panama Canal Act of August 24, 1912, stated:

The Panama Canal is being constructed by the United States wholly at its own cost, upon territory ceded to it by the Republic of Panama for that purpose, and unless it has restricted itself, the United States enjoys absolute rights of ownership and control * * *.

President Carter also declared:

In the peaceful struggle against alien ideologies like communism, these treaties are a step in the right direction. Nothing could strengthen our competitors and adversaries in this hemisphere more than for us to reject this agreement.

I find this to border on the deceitful, indeed, for it is a matter of public record that the Communist Party of Panama—Partido del Pueblo—on October 14, 1977, announced its support of the new treaties.

What it did do was to state that it does not like continued U.S. military presence until 1999, so we can expect continued hostility and threats despite these treaties that Mr. Carter tries to sell as a hemispheric cure-all.

I shall refrain from commenting on other parts of the President's fireside chat. As I have stated over and over again, I wish the President would demand the truth from his State Department so that he could give the American people only facts on the Panama Canal and Canal Zone.

PRESENTATION OF A PETITION

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. QUILLEN. Mr. speaker, I have received a petition from my constituent, Mr. Oscar Riddle of Erwin, Tenn., who requests that the Congress repeal the withholding tax law. Mr. Riddle has asked that I present his petition to the House of Representatives, and I now submit it for appropriate referral:

PETITION OR MEMORIAL

Under clause 1 or 4 of rule XXII, the following petition and papers were laid on the Clerk's desk and referred as follows:

By Mr. QUILLEN, petition of Mr. Oscar Riddle of Erwin, Tenn.:

PETITION TO: REPEAL THE WITHHOLDING TAX LAW

Under the provisions of the First Amendment to the Constitution of the United States I hereby petition Congress to repeal the Withholding Tax Law so I can personally discharge the responsibility imposed on me when Congress taxes my income. Please include the following reasons in my petition.

(1) As a free people we have given Congress the authority to tax our income. We should all have the freedom to pay that tax directly so we will know exactly how much it is costing each of us to help support our government. This law tends to hide that fact.

(2) Most of us have never known the satisfaction of collecting all of the money we have earned. It is time that we experienced that feeling. We also need the experience of counting out a large portion of what we have earned for IRS so those of you in Washington will have that share of our income that you want to spend. This should make us a more responsible electorate and make our government a bit more responsive to us as well.

Please notify me at the address below when this petition has been presented to Congress, and send me a copy of the CONGRESSIONAL RECORD of that date so I will know it has been done: Oscar Riddle, 1304 Ash Highway, Erwin, Tenn. 37650.

OSCAR RIDDLE.

FRIEDMANNS ARE SCIENTIFIC PIONEERS

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. FUQUA. Mr. Speaker, after 15 years of research in the harsh, desolate environment of the world's deserts, the persistence, fortitude, and skill of two Florida State University biologists finally paid off in the form of what could be one of the most significant discoveries of this quarter century. Dr. E. Imre Friedmann and his wife, Roseli Ocampo-Friedmann, recently found and identified microbes living inside of certain porous rocks in the freezing, dry valleys of the Antarctic, an area that was believed to support no life forms whatsoever.

My heartfelt congratulations go out to these two pioneers. Their studies should have a great impact on future searches for life forms—not only on this planet, but on others as well. Mars for instance, has environmental conditions similar to those in which the Friedmanns discovered forms of fungi, bacteria, and algae by meticulously breaking open certain types of sandstone rocks. Undoubtedly, this team's work will influence the design and capabilities of future planetary probes. The Viking lander may not have yielded the greatest discovery in the history of mankind—that of extraterrestrial life—simply because it could not break open a stone.

In fact, Dr. Richard S. Young, Chief of Planetary Biology for the National Aeronautics and Space Administration, has said.

This interesting, if speculative, analogy—between Mars and Antarcitica—is of considerable interest to NASA in designing future attempts to study planetary surfaces for evidence of life.

The world owes a great debt to the Friedmanns, whose devotion to working in a difficult area of biology has already led us down corridors never before considered. Their find has brought us closer to understanding the ecology of our world and has garnered them well-deserved praise. This fascinating discovery is just another example of the fine scientific contributions being made by Florida State University. I sincerely hope that the National Science Foundation and NASA, both of which financed the study, will continue to aid this prestigious institution of scientific endeavor so that man may some day fully understand the universe.

ANOTHER LOOSE CANNON ON THE DECK?

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. HYDE. Mr. Speaker, the confusion and lack of direction in our foreign policy was further demonstrated last Wednesday when Leonard Woodcock, U.S. envoy to the People's Republic of China, declared that the United States will seek full diplomatic recognition of the Peking government.

Ambassador Woodcock further stated that our relations with Taiwan are founded on "an obvious absurdity."

Thursday, the State Department "disavowed all knowledge" of Ambassador Woodcock's statement, sounding something like the old television show, "Mission Impossbile."

Who is determining our foreign policy? Who is making the decisions on whether or not this country will fully recognize the Government of Communist China?

Is it President Carter, who said in March 1976 while campaigning "I believe that the foreign policy spokesman for our country should be the President"?

Or is it Leonard Woodcock, who because of his vast experience in foreign affairs as head of the United Auto Workers, was appointed by the President to be the U.S. Ambassador to Communist China?

Who speaks for whom and for what? Is this the President's way of telling Taiwan that we are preparing to abandon our traditional friendship with them in exchange for speculative benefits to be gained from normalizing relations with Red China?

It seems that President Carter was thinking ahead when, in May 1976 during his campaign, he said:

For many nations we have two policies: One announced in public, another pursued in secret. In the case of China, we even seem to have two Presidents.

It is no wonder that small countries, friendly to the United States, are jittery. Any tampering with the Taiwan Treaty

will further erode the trust these countries may still have in our consistency and credibility.

Is Ambassador Woodcock really playing Secretary of State, or is he floating a trial balloon as instructed by the President?

Taiwan and its 18 million people have, with the help and friendship of the United States, built their country into a prosperous, industrialized island state. It has, in turn, reciprocated with military support of our efforts in Korea and Vietnam. A break in diplomatic relations with Taiwan would have a ripple effect throughout the world. We would prove it does not pay to be successfully anti-Communist and expect to retain our friendship.

Our friends in Taiwan have a right to know what our policy is; the American people have a right to know; the Congress should demand to know.

NATIONAL HEALTH PROTECTION ACT OF 1978

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. SIMON. Mr. Speaker, today I am introducing the National Health Protection Act of 1978. This legislation attacks three of the critical problems in our existing health care system. First, is the lack of an effective mechanism for financing comprehensive maternal and child health services for all Americans. Second, is the fear shared by all families that the costs of catastrophic illness might obliterate their financial security. Third, and finally, is the need for an upgraded medicare system that more adequately meets the medical demands of the elderly.

The National Health Protection Act deals directly with each of these shortcomings. Title I would establish a system of Federal payments—through capitation grants—for comprehensive medical care services provided to children age 0 to 6 and pregnant women. Title II would establish a system of refundable tax credits to cover the costs of catastrophic medical expenses. Title III would extend medicare part B to include coverage of hearing aids, eyeglasses, dentures, and out-of-hospital prescription drugs. It would also reduce the inpatient hospital deduction under medicare part A from the present $144 to $50.

Mr. Speaker, as a member of the Budget Committee, I have become increasingly sensitive to the fiscal constraints on Federal programs. Many national health insurance schemes have been proposed, some representing an increased Federal cost of up to $130 billion. It is fiscally, politically, and administratively unfeasible for the Federal Government to adopt such a massive program in a single measure.

Despite these constraints, health care is clearly an area where we need to commit the political will and Federal funds necessary for meaningful change. Based on Social Security Administration calculations, the legislation I am proposing would cost the Federal Government approximately $29.9 billion. While this is no paltry sum, I believe it is a moderate figure for the goals that would be accomplished.

The three separate sections of the proposal could be inaugurated at different times. This would ease the financial burden on the Federal Government. For example, if the program for the aged began in the next fiscal year, one of the other two programs could be launched 6 or 9 months later. The increase in costs would then more nearly approximate anticipated increases in Federal revenues.

Passage of legislation such as this would provide us with an opportunity to implement improvements in our national health system, examine their effects, and then phase in other changes as necessary.

The justification for such an incremental approach to national health insurance has been effectively stated by former HEW Secretary Wilbur J. Cohen, in testimony to the House Health and Environment Subcommittee:

> * * * when one considers that there are before the Congress efforts for a comprehensive national health insurance, which I endorse, I still believe that it is necessary for the Congress, considering both fiscal aspects . . . and the managerial efficiency and effectiveness of programs, to proceed on what I call an incremental basis or what some people perhaps in a more critical view call a categorical, fragmented, or piecemeal basis, with the development of legislature * * *.
>
> I think it accepts an attitude that it is important to provide public support for whatever we do and that sometimes what I would refer to as millenial objectives are best put in place by a piecemeal, categorical, even fragmented approach as long as you are aware of what you are doing and you can see over the course of time the direction that you are proceeding and are willing to make continuous efforts in that direction.

Mr. Speaker, I would now like to move to closer examination of the needs my legislation addresses, and the manner in which it does so.

COMPREHENSIVE MATERNAL AND CHILD HEALTH PROTECTION FINANCING

This Nation ranks 15th in the world in infant mortality. There is no justification for this. About one-fourth of the children in this country never see a doctor before they reach the age of 18. Almost one-half of our children have not seen a dentist. Nearly 40 percent of children age, 0–5 have not received polio immunization shots.

Ten to twenty percent of all children in the United States suffer from chronic, handicapping conditions. It is estimated that at least one-third of these conditions could be prevented by appropriate care during preschool years. We ought to be encouraging this needed care.

The health of children—and concomitantly pregnant women—should be among the highest of our priorities in the health field. There is no greater investment in our future than to insure the healthy development of our children. With relatively small expenditures, we can provide comprehensive health care to children and pregnant women. Coverage of pregnant women is important, because so much of a child's mental and physical development depends on the prenatal environment.

Children have not been adequately served by current Federal health programs. In 1960, one of every 2 Federal dollars spent for health care reached children while in 1975, only 1 of every 10 Federal health dollars reached children. In the last 15 years, we have had a Seventeenfold increase in overall health expenditures. Yet for children, there has been only a fourfold increase.

The National Health Protection Act of 1978 would provide reimbursement by the Federal Government to providers of comprehensive health care services for all children age 0 to 6 and pregnant women. Payment would be made on a capitation basis. This means that fixed payments would be made to health care providers on the basis of the number of people they agree to serve.

There are several advantages of this system. It would encourage providers to keep children healthy. Preventative care—which is critical for child health—would be encouraged. Children would grow up healthy and learn the ingredients of preventive care that would keep them healthy. The use of unnecessary expensive equipment and unnecessary procedures would be discouraged. Per capita grants would encourage the formation of group health practices such as Health Maintenance Organizations, which further contribute to cost savings and preventive care.

A system of capitation payments would work especially well in the maternal and child health field. Care is predictable for these sectors of the population. Most care for children relates to prevention checkups, immunizations, and routine procedures for common illness. Illnesses and care related to pregnancy are also fairly uniform and predictable. In the few instances of unexpectly high costs of care, providers would be protected by reinsurance mechanisms that are encouraged in the bill.

Federal financing of maternal and child health care would not be expensive, when compared with the benefits. My bill would provide coverage for all pregnant women and children age 0 to 6. Based on Social Security Administraiton figures, the cost of such coverage is estimated at $9 billion. Children are much less expensive to serve than other sectors of the population. While per capita expenditures in 1976 for people over 65 was $1,521 and for people 19 to 64 was $547, it was only $249 for children under 19.

CATASTROPHIC PROTECTION TAX CREDITS

One of the greatest fears facing a significant portion of American families is the fear of catastrophic health costs that could be financially debilitating.

Many Americans are already covered by major medical insurance so that they have good protection. Others are covered under medicaid and have adequate protection against catastrophic medical costs. According to the Congressional Budget Office, this still leaves millions of people in this country who are inade-

quately protected against catastrophic costs.

Eighteen million Americans have no medical insurance and do not qualify for any public programs. They are unprotected against catastrophic costs. Another 24 million people who are covered by medicare have inadequate protection against catastrophic costs. Finally, according to CBO, at least another 40 million people have inadequate private insurance.

Something must be done to assist these unprotected and poorly protected people. The key is to insure that people's out-of-pocket costs are not excessive. There is no reason to reimburse people for what their insurance already covers.

While 21.4 million families will incur medical expenses exceeding 15 percent of their income in 1978, 90 percent of these costs will be met by private insurance or existing public programs. But nearly 7 million families will have out-of-pocket expenses exceeding 15 percent of their income. Over 4 million of these families will be low-income families. The large number of poor families in this category points to the need for coverage based on percentage of income, rather than on amount of the expenditure. As the Congressional Budget Office has noted: "A substantial number of low-income families have expenses that might be considered average or normal by absolute standards but are catastrophic in relation to low income."

The inadequacy of proposals to cover annual expenditures of over $2,000 or so can be viewed in this light. While an out-of-pocket expenditure of $1,500 may be easily absorbed by a family with an income of $20,000, it would clearly be catastrophic for a family with an income of $8,000.

The catastrophic tax credit system established in the National Health Protection Act of 1978 is based on percentage-of-income calculations. Once a family spent 10 percent of its income on medical expenses, it would qualify for refundable tax credits for one-half of its additional health expenditures up to 20 percent of income. At that point, any additional health expenditures would be reimbursed in full through the tax system.

Based on Social Security Administration estimates, such a catastrophic tax credit system would result in a net increased Federal cost of $16.9 billion. While this is expensive, it is worth the price to remove the hanging fear of catastrophic medical expenses from millions of American families.

While providing extensive coverage, this system has built-in cost controls. Few families are going to excessively pursue medical care or medical insurance when they must bear the burden of a significant deductible—all of the first 10 percent of their income spent on medical care—and a significant coinsurance payment—one-half of additional expenses up to 20 percent of their income. As CBO has commented in relation to a similar plan:

> Such a plan would respond to the most pressing problems of low-income families not covered by private insurance or medicaid. However, these families would still be required to commit a substantial share of their resources to purchasing medical care.

A catastrophic insurance administered through the tax system has the great advantage of simplicity. It uses established forms and procedures. The possibility of fraud is reduced. The system also assists providers of services in that it assures them of eventual payments for services rendered.

The refundable tax credit will replace the current tax deduction for medical expenses. This provides a partial source of funds for the new program and also increases the equity of the health portions of the tax system. The present tax deduction is extremely regressive. It only benefits higher income people who itemize deductions and is of no use to lower income taxpayers who use the standard deduction. Senator EDWARD KENNEDY has referred to this deduction as "The national health insurance plan for upper income homeowners." While the type of expenses covered would remain the same, the effect will be much more equitable.

EXPANSION OF MEDICARE

When we think of national health insurance proposals, we often neglect the elderly. We tend to assume that their expenses are covered sufficiently by medicare and medicaid. This is not the case, however. Despite the fact that 95 percent of the elderly are covered by medicare, the aged pay 29 percent of their personal health expenditures. Medicare actually covers only 42 percent of elderly health care costs, while medicaid covers an additional 16 percent. The elderly pay an average of $390 per year in out-of-pocket expenses for health care. For many, this is a large bite into their extremely limited income and savings. The catastrophic tax credit established in title II would handle some of these problems. There are, however, several shortcomings in the types of care covered under medicare. These shortcomings discourage people from utilizing needed services.

MEDICAL APPLIANCES

The well-being of millions of older Americans is dependent on medical appliances—eyeglasses, hearing aids, and dentures. These appliances are not covered under medicare. This results in millions of elderly Americans unnecessarily losing visual and audio contact with the world around them as well as being unable to chew the types of food that will keep them healthy and alive.

The problem is simple. According to the House Aging Committee's Subcommittee on Health and Long-Term Care: "In short, for millions of elderly Americans, medical appliances are essential to life itself * * * Presently, these needs for medical appliances are not being met."

Many elderly people simply cannot afford the price of eyeglasses, hearing aids, and dentures. So they do without them. The results are tragic, as pointed out by Nelson H. Cruikshank, formerly president of the National Council of Senior Citizens and now a member of the Carter administration:

> They pay but not in dollars. They pay in the quality of life. Some cut down on food requirements. Some go without the proper type of shelter. Some cut off their social life. Many just do without and fall back into more and more seclusion and live a restricted life because these appliances are not available to them as they should be.

The statistics are staggering. Over 5 million elderly Americans need new corrective lenses because the ones they have either do not help their sight or actually harm it. Countless additional elderly American need eyeglasses, but do not have them because they cannot afford them. Many elderly people cannot see well, and their life is severely restricted. Some are actually judged senile because they cannot see well enough to respond to normal stimuli.

There are 11.4 million elderly Americans without natural teeth. Of these, 600,000 have no teeth whatsoever. Of those who have dentures, 350,000 people over 65 have incomplete dentures. An additional 3.4 million people have dentures which need to be replaced or refitted. While some States provide certain dental services under medicaid, coverage is far from adequate.

Over one-half of all persons 65 years of age and over suffer from impaired hearing. Nearly 8 percent—1.5 million elderly Americans—are unable to hear words spoken in a normal voice. In many cases, a hearing aid can solve the problem. But there is virtually no coverage of hearing aids under medicaid, medicare, and other health benefit programs.

The National Health Protection Act of 1977 would alleviate these problems by including under medicare, part B, coverage of eyeglasses, hearing aids, and dentures, as well as related examinations. The cost, according to the Social Security Administration, would be $1.9 billion. This is not too great a price to pay to allow our senior citizens to be able to hear, see, and eat properly.

DRUGS

My bill would also cover under medicare, part B, the costs of out-of-hospital prescription drugs. In 1975, each senior citizen had average out-of-pocket expenditures for drugs of $102.30. This represented 87 percent of their overall drug expenses.

It is senseless for medicare to cover expensive hospital treatment, but not the followup drugs that are often needed to keep a person healthy and out of the hospital.

My bill would include coverage of out-of hospital drugs under medicare, with the regular 20 percent cost-sharing. The additional cost to the Federal Government would be $1.8 billion.

HOSPITAL DEDUCTIBLE

One additional problem with medicare is the inpatient hospital deductible under part A. It now costs an elderly person $144 to enter a hospital. This is often prohibitive. While it is important to discourage elderly people from unnecessarily entering the hospital, we should not, at the same time, discourage them from getting needed care.

The National Health Protection Act would set a better balance by lowering the inpatient hospital deductible to $50. The increased cost to the Government—

according to Social Security Administration estimates—would be $336 million.

Mr. Speaker, I believe the legislation I am introducing today is a reasonable and effective approach to some of our most serious health care problems. The principles I am advocating in this bill are supported in the Senate by GARY HART, who has introduced similar legislation.

I urge my colleagues to examine the National Health Protection Act. An outline of the bill follows:

OUTLINE OF NATIONAL HEALTH PROTECTION ACT OF 1978

(Introduced by Mr. Simon)

A bill to establish a national system of financing child and maternal health care and a system of protection against catastrophic health care costs, and to improve and expand health care for the elderly.

TITLE I—COMPREHENSIVE MATERNAL AND CHILD HEALTH PROTECTION

Sec. 101.—Definitions.

Sec. 102.—Establishes eligibility requirements for children 0 to 6 and pregnant women.

Sec. 111.—Establishes a system of Federal reimbursement through capitation payments to participating providers for coverage of children 0 to 6 for all health care services related to the diagnosis and treatment of any disease, injury or disability, as well as any other health care services necessary for the adequate protection, maintenance, or restoration of his or her mental and physical health, and coverage of pregnant women for all health care services related to the diagnosis and treatment of pregnancy, diseases or injuries that could threaten the healthy development of the child, and diseases or injuries caused by pregnancy which occur in the 12 weeks following termination of pregnancy.

Sec. 121.—Defines a participating provider as any provider of health care services that enters into an agreement with the Secretary of HEW to provide—at the established capitation rates—covered health care services.

Sec. 122.—Authorizes the Secretary of HEW to make prospective capitation payments to participating providers. These capitation payments may vary by geographic region or age of the child as needed to reduce shortages of providers in particular areas or among certain age groups. The Secretary of HEW is also given authority to assist in the formation of re-insurance mechanism to protect participating providers against unexpected costs.

Sec. 123.—Insures that there are no payments under other Federal programs for benefits provided under this Act.

Sec. 131.—Authorizes $9 billion a year for fiscal year 1980 and such sums as necessary for fiscal years 1981, 1982, 1983, and 1884.

Sec. 141.—Gives the Secretary of HEW the authority to establish capitation rates, establish standards and qualifications for participating providers, establish basic agreements between the Secretary and the participating providers, monitor and study operation of the program, prescribe needed rules and regulations, and report annually to Congress on the administration of the program.

Sec. 142.—Establishes a National Maternal and Child Health Protection Advisory Council to advise the Secretary on policy issues involved in the administration of the program and to study its operation.

Sec. 143.—Provides for coordination between the Secretary of HEW and State health planning and development agencies and health systems agencies.

Sec. 144—Gives the Secretary of HEW authority to make or contract out studies concerning the operation of the Act and how it fulfills its goals.

Sec. 145.—Establishes procedures for the Secretary of HEW, in cooperation with professional organizations, to suspend or terminate contracts with participating providers who are not meeting the terms of the agreement.

TITLE II—CATASTROPHIC PROTECTION TAX CREDIT

Sec. 201.—(A) Establishes a new medical expenses tax credit equal to half of a family's medical expenses that are between 10% and 20% of its modified adjusted gross income, and equal to all of its medical expenses above 20% of modified adjusted gross income.

Defines medical expenses as expenses incurred for the diagnosis, cure, mitigation, treatment or prevention of disease, or for the purpose of affecting any structure or function of the body. Also covered are transportation primarily for and essential to medical care, and insurance premiums covering medical care.

Defines modified adjusted gross income as adjusted gross income reduced by the amount of personal exemptions, and increased by the amount of income from capital gains, interest on government bonds, and government transfer payments.

Makes the tax credit refundable if it exceeds a family's tax liability.

Eliminates the current medical care deduction.

Makes a variety of technical and conforming amendments to the Internal Revenue Code.

Sets an effective date of January 1, 1980, and a "sunset" date of January 1, 1983.

(B) Gives the Secretary of the Treasury the authority, after consultation with the Secretary of Health, Education and Welfare, to prescribe regulations necessary to provide payments and prevent fraud.

TITLE III—EXPANSION OF MEDICARE

Sec. 301.—Provides coverage under Medicare Part B of hearing aids, dentures and eyeglasses (and related examinations), and prescription drugs.

Sec. 302.—Lowers the in-patient hospital deductible under Medicare Part A to $50.

Sec. 303.—Technical and conforming amendments.

Sec. 304.—Sets an effective date of October 1, 1979 for dentures, hearing aids, eyeglasses and prescription drugs. Sets an effective date of the first day of the first month following the enactment of the bill for lowering the hospital deductible.

THE 1978 PRESIDENTIAL CLASSROOM FOR YOUNG AMERICANS

HON. TRENT LOTT

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. LOTT. Mr. Speaker, I would like to take this opportunity to recognize three outstanding young people from the Fifth Congressional District of Mississippi, Robin Lee and Sarah Beth Stein of Biloxi, and William E. Kergosien, of Bay St. Louis, who are here in Washington this week to participate in the 1978 Presidential Classroom for Young Americans.

I always enjoy discussing the operations of our Federal Government with the presidential classroom students and commend these young Americans for their interest and attitude toward our Nation's destiny.

THE HIGH PRICE OF REGULATION

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. ASHBROOK. Mr. Speaker, one of the most disturbing trends in our Nation is the growing number of Federal rules and regulations. The Government is expanding its involvement into all aspects of our economy and our lives.

So great is the paperwork flow that the American economy is in danger of being buried under. The Commission on Federal Paperwork estimates that the Government produces enough documents in a single year to fill 51 major league baseball stadiums or 11 new Washington Monuments. A former Commission member is quoted in the January 2 Time magazine as saying:

> Washington is the source of so much red tape that you'd think it was working on a landfill somewhere. Like the Grand Canyon.

And, as Time magazine goes on to say,

> The paper is backed up by the stern might of the law; it can be followed by fines, loss of federal aid, harassment and obloquy.

Not all regulation, of course, is bad. Reasonable regulation can produce positive benefits such as less pollution and safer working conditions. The overzealous regulation we are now experiencing, however, carries a very high price. The cost can be measured in terms of individual freedom, diminished competition and dollars and cents.

The Dow Chemical Co. recently completed an in-depth study of the cost of complying with Government regulations. The study showed Dow spent approximately $186 million to satisfy these requirements in 1976.

The dollar amount is staggering. Almost as disturbing, however, is the fact that this figure is 27 percent higher than the amount needed to comply with Government regulations only 1 year ago. These costs are passed on to the consumer in the form of higher product prices.

The price of Government regulation also must be viewed in terms of what the consumer did not get. Innovative products and scientific research can be blocked because of unreasonable regulation.

This fact has been stressed by Murray Weidenbaum, director of the Center for the Study of American Business at Washington University. He points out that spending on research and development has slowed to a crawl. Over the last decade, private spending on research has risen only 2 percent a year. And more scientists were employed in industry in 1968 then were employed in 1975.

This is exacting a heavy toll. While the number of patents issued to foreign nations more than doubled between 1963

and 1973, the number of patents to U.S. nationals declined.

As nationally syndicated columnist James J. Kilpatrick has written:

In the stifling atmosphere of excessive regulation, everything slows down.

Kilpatrick then quotes Murray Weidenbaum on how that is reflected in the Food and Drug Administration:

As a result in large part of the stringent drug approval regulations, the United States was the 30th country to approve the anti-asthma drug metaproterenol, the 32nd country to approve the anti-cancer drug adriamycin, the 51st country to approve the anti-tuberculosis drug rifampin, the 64th to approve the antiallergenic drug cromolyn, and the 106th to approve the anti-bacterial drug cotrimaxazone.

These regulatory delays result in heavy social costs. People who could find relief from their illness are deprived of the drugs they need.

Regulatory delays also lead to diminished competition. As Weidenbaum stresses,

Government regulations tend to hit the smaller companies disproportionately hard, in record-keeping, job safety, labor relations, environmental controls, and so on.

Large companies are better able to adjust to the regulatory burden while smaller companies tend to go out of business.

The price of governmental regulation is intolerably high. It is time to cut through much of this redtape. It is time to put an end to overregulation.

THE 26TH ANNUAL CONGRESSIONAL PRAYER BREAKFAST

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. MAZZOLI. Mr. Speaker, I was honored to take part in the 26th Annual National Congressional Prayer Breakfast held last week here in Washington.

Since the second session of the 95th Congress has just begun, it is fitting and proper that we call upon the good Lord for guidance and counsel to see us through our rigorous and demanding labors.

The United States was founded by men and women who recognized that a reliance upon the Almighty and the freedom to practice one's religion freely are essential to a nation which seeks to remain strong in the face of challenge from within and without.

Our Nation's Government has grown and flourished precisely because its foundation of prayer and love of God has remained strong and secure.

Prayer has always been an important part of my life and it has shaped my private as well as public life.

This annual prayer breakfast—which attracts people from all over the world—is a testimonial to the fact that increasing numbers of powerful governmental leaders are publicly declaring their dependency on prayer and on God.

This is positive proof that the spirit of our Founding Fathers remains strong today, and that this spirit keeps our Nation great and good.

WORTH REVIEWING

HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. VANDER JAGT. Mr. Speaker, in recent weeks we have read and seen a great deal of publicity surrounding a report of the Civil Service Commission on its investigation concerning the Consumer Product Safety Commission (CPSC). This investigation apparently has focused on some 30 employees at the CPSC, as well as its Chairman, S. John Byington.

In recent days I have had the opportunity to review Mr. Byington's response to Hon. Alan K. Campbell, Chairman of the Civil Service Commission, dated February 2, particularly on those issues reflecting on Mr. Byington. Chairman Byington indicates that the CPSC will direct a response dealing with the 30 individual cases to the Civil Service Commission no later than February 13.

Most Michigan Republican Members of Congress have joined with me in urging Mr. Campbell's personal review and reevaluation of this entire matter. We do so only with the deep concern and interest that the matter be conducted solely on merit and facts.

In placing with this statement Mr. Byington's detailed response of February 2 to Mr. Campbell, I believe of particular consideration and interest would be Mr. Byington's listing of the major accomplishments of the CPSC in the past 18 months. His letter follows:

U.S. CONSUMER PRODUCT SAFETY COMMISSION,
Washington, D.C., February 2, 1978.

Hon. ALAN K. CAMPBELL,
Chairman, Civil Service Commission, Washington, D.C.

DEAR SCOTTY: The Commission's management and staff are in the process of preparing a detailed response regarding each of the 30 individual cases cited in Section V of the Civil Service Commission's January 12, 1978 report on its investigation of the merit system in the Consumer Product Safety Commission (January report). I believe that a precise analysis of these 30 individual cases, prepared independently from my own response, will serve to expose numerous deficiencies and errors in the report. It will also separate my personal response from the Agency's,—in hopes that the individual cases will be reviewed in the most objective and fair manner possible. The agency's response will be forwarded to you no later than February 13, 1978.

I would like to express our appreciation to you and your staff for your continuing assistance in dealing with these individual cases, in order to minimize any adverse impact on the careers of the individual employees whose cases are cited. I think that it is essential for the CSC to carefully consider the impact of this report on the rights of these dedicated public servants, and to take the necessary steps to correct any factual deficiencies and legal inaccuracies of the January report.

As to the findings in Sections I through IV, particularly those which relate to me personally and which have already been the subject of considerable publicity and public comment, I feel that any delay on my part in responding to such allegations might only serve to lend credibility to their content.

Let me begin by quoting from a letter to me dated March 9, 1977 from Mr. John D. R. Cole, Director of your Bureau of Personnel Management Evaluation:

"Enclosed is the report of the Civil Service Commission evaluation of personnel management at the Consumer Product Safety Commission. The report is based on findings from an onsite review by a CSC team from November 8 through November 22, 1976.

"The report covers in detail those findings presented to you, and other top management officials, on December 10, 1976. Generally, we found that the personnel management program of the agency is effectively contributing to CPSC mission accomplishment. The staffing program is generally producing quality candidates and promotion actions are being processed correctly."

The March report enclosed with Mr. Cole's letter generally gave the Commission management high marks for the handling of its personnel practices. It made specific recommendations for actions required by CPSC, all of which have been acted upon—including the 13 specific classification cases. It pointed out that, "The most important problem facing the agency is that a significant number of its positions are overgraded." Secondarily, "Timeliness in processing personnel actions was perceived to be the major staffing problem by both supervisors and employees." Thirdly, "The lack of published career ladders also slows down promotions in some cases." But the March report acknowledged that CPSC is revising its Merit Promotion Plan and made recommendations for conclusions in this revision. The record clearly indicates that these matters have continued to be given top priority. The March report stated:

"Agency compliance with CSC and internal regulations in processing personnel actions was satisfactory.

"The agency has already made significant progress in correcting this (use of temporary appointments) situation * * * from 277 in 1975 to 69 in 1976.

"The agency classification program has improved during the past year in several respects * * * the recently established controls on average grade have proven beneficial.

"The quality of candidates referred for vacancies at CPSC is usually good."

I find it difficult to understand why the Civil Service Commission would issue such an evaluation in March and shortly thereafter proceed with another evaluation covering some of the same positions and personnel procedures. Disturbingly, the investigation closely followed my refusal, based on our statute and our lack of transition authority to hire political campaign workers as requested by personnel from the White House.

In the January report, CSC departed from its normal professionalism. It amassed a document filled with innuendo, insinuations, and admittedly unsubstantiated allegations. The obsolescence and nature of many of the alleged violations are deliberate attempts to inflate the magnitude of the alleged improprieties and their inclusion is designed to sustain preconceived allegations of abuses. I believe that the instigation for this evaluation came from sources other than CSC particularly because this document was released to Congressional offices and the press simultaneously to being given to CPSC.

I can only conclude that the motivation for singling out CPSC and applying a special standard which is not broadly, much less universally applied to other agencies during a transition and reorganization period

is for political purposes. I am convinced that this report is directed solely at harassing me, one of the two remaining Republican Chairmen of a regulatory agency. It is particularly regrettable that 30 individuals have also become victims of this political harassment, and have had their privacy rights impaired.

I cannot understand the motivation for including so many cases in the report (approximately one-third) which the investigator knew were obsolete and required no action. Most of the remaining two-thirds of the cases relate to alleged procedural or classification errors that are primarily within the province of technical personnel specialists on whom management must rely in the day-to-day operation of a personnel system. At all times I have relied on the advice of our personnel specialists in personnel actions and in no case disregarded that advice. Although the report attributes blame to the management of the agency, management culpability is never substantiated. Documentation for management's culpability in the report comes from the personnel specialists whose own culpability is summarily dismissed by the CSC. The credibility of such information is suspect, lessening further the report's objectivity. This is especially troubling because in sworn statements I have indicated that no employee with personnel responsibilities ever brought the purported improprieties to my attention. Had he or she done so, I would have immediately investigated and taken the necessary corrective action.

Section IV on "Responsibility" is illustrative of the many unsubstantiated allegations found throughout the January report. It starts off with the allegation that "Most of the violations . . . occurred as a direct result of actions taken or sanctioned by either Mr. Byington or Mr. Dimcoff." It then specifically alleges that I "was principally responsible for the improper appointment of the 12 consultants." However, later in the same section, the narrative states: "The extent to which Chairman Byington knew that actions he took or were taken in his name were contrary to law or regulation is also unclear. It is doubtful he knew on a case-by-case basis the degree of impropriety; . . ."

In one instance—the discussion on consultants—I believe that the CSC oversteps its legal authority. The CPSC has the direct authority to hire and fire and to evaluate qualifications under 5 U.S.C. 3109. CSC's statutory authority is only to ensure that consultants do not perform work within the competitive service. However, in the report the CSC attempts to substitute its judgment on the qualifications of the individuals involved without ever fully and factually documenting the experience of those individuals. For example, the report contains sweeping, unsubstantiated statements like "Most of the consultants . . . were not qualified. . . ." To make such an allegation is clearly outside the province of CSC, and it is specifically refuted by a review of each consultant's record of performance—a matter that was available to and discussed with the investigators. Because CSC's authority is so limited in this area, it would be appropriate and fair for these improper suggestions and comments to be deleted from the final report.

I am also troubled by the allegations relating to the hiring of attorneys with veterans' preference, because a substantial effort has been made by the Office of General Counsel and the Directorate for Compliance and Enforcement over the last year to recruit and employ minority attorneys. Nowhere in the report is this effort ever recognized. With respect to the hiring of veterans, the attorneys discussed in the report were all hired according to the procedures in effect at the time, and to retrospectively criticize the agency for failing to follow new procedures is particularly unjust.

In addition to the specific allegations made in the report, I was very disappointed with other aspects of it. It is ironic that much of the report is directed at women and blacks. It concerns me greatly that 5 of the 30 people are black and 15 are women, two of whom are black. Thus 18 of the 30 cases relate to minorities. I am under the impression that it is Federal policy to make every reasonable effort to recruit qualified female and minority candidates.

The finding that preferential treatment and personal favoritism was extended to certain individuals is also without merit. Of the 30 cases, 15 were either employees of CPSC prior to my arrival as Chairman or confidential staff to other Commissioners. The other 15 were selected because in my judgment they had the knowledge, expertise or experience to perform important tasks in our difficult transition period. Eleven of these 15 were minorities or women. Six of the 15 have already completed their work and left the agency. Two are consultants who will complete their work within a couple of weeks. Three are presently holding consultancy positions that will be evaluated as CSC requested. One is a Schedule C on my immediate staff. Three are now career employees, within the agency, two of whom are long standing Federal civil servants. Therefore, only one individual has attained career status for the first time.

Nowhere in the January report is there any recognition of the fact that during the period covered, the Commission was undergoing a transition from one Chairman to another and was working closely with CSC to complete a major reorganization (its first since its creation) to revise its merit promotion procedures and to establish staffing patterns and career ladders. The actual progress made in these efforts during FY 1977 is completely disregarded and not mentioned despite the CSC commendation in the March report.

No mention is made of the fact that agency management was deliberately and responsibly not filling certain vacancies in January 1977—in the midst of its reorganization, which was later officially approved by CSC—because we were operating on a "no unnecessary adverse action" principle. It is clearly easier to move vacancies than it is people. Yet it is also clearly management's responsibility to anticipate and plan for potential events—such as a government-wide "hiring freeze".

Little or no consideration seems to have been given to the accepted use of, need for, or role played by experts and consultants in every agency reorganization. To even suggest otherwise would be to completely disregard the facts and events of past and present administrations.

Although we may not agree regarding the authority of the CSC to require certain of the actions or agree with the CSC regarding culpability on the part of management, we do agree that it is essential that this agency maintain a personnel program acceptable within the system and that good relations with the Civil Service Commission be established. Although there had been tension between CSC and CPSC since CPSC's inception, and prior to my assuming the Chairmanship, I thought the March report, and my efforts this summer to provide you with constructive comments on the CSC personnel reorganization project, showed real progress in developing better coordination and cooperation between our agencies. I believe it is critical to the long-range future of CPSC that our problems be resolved and, therefore, we intend to proceed with all necessary corrective measures.

Basically CPSC needs to have the political harassment aimed at me separated from any constructive criticism of the agency aimed at helping CPSC achieve its mission. Such is not the case with the January report. It appears to be a mechanism by which some people are still trying to reverse the results of my confirmation process, with little or no regard for the adverse consequences of such action on the agency and the public as a whole.

We have been operating under the worst possible political circumstances and we have been burdened with longstanding Commission vacancies and with lengthy and cumbersome procedural requirements under the laws we administer. Yet, I believe that CPSC has truly "come of age" as an independent regulatory commission.

Major accomplishments during the past 18 months include:

CPSC has established Commission-wide priorities as well as a system and criteria for reviewing and revising them periodically.

CPSC has finalized mandatory standards for matchbooks, architectural glazing materials and pacifiers and is proceeding with the development of mandatory standards for cellulose insulation, miniature Christmas tree lights and power lawn mowers.

CPSC has for the first time taken significant banning actions under Section 8 of the CPSA for unstable refuse bins, unvented gas space heaters (proposed), certain asbestos containing products, extremely flammable contact adhesives and lead-in-paint.

CPSC has completed the agency's first timeliness cases under Section 15 of the CPSA (Corning Glass Works, Inc.—defective coffee pot; Wham-o Manufacturing Co.—defective cross-bow; North American Systems—Mr. Coffee).

CPSC is moving aggressively against imminent hazards under Section 12 of the CPSA (aluminum wire, pitching machines and amusement rides).

CPSC has reduced its backlog of petitions from more than 60 to only 4 that are past the 120-day time limit.

CPSC is making real progress in the systematic regulation of chronic hazards through our draft cancer policy and the Interagency Regulatory Liaison Group (CPSC, EPA, FDA and OSHA), including regulatory action against chlorofluorocarbons and benzene (staff drafting proposal). I believe this is currently the most viable regulatory reform effort in the Federal government.

CPSC has issued the first labeling and data submission regulation for products containing chlorofluorocarbons under Section 27 of the CPSA. In addition, CPSC has proposed a regulation under Section 27 for CB antennae and is preparing to propose labeling regulations for sleepwear chemically treated for flame retardant purposes.

CPSC has proposed and/or finalized numerous procedural regulations (Section 15, 16 and 6(b) of the CPSA), in addition to rules of practice for adjudicatory and nonadjudicatory procedures under the CPSA and FFA.

CPSC has approved the creation of an Office of Public Participation, and has issued proposed procedures for financial compensation for participants in informal rulemaking proceedings.

CPSC has aggressively addressed the use of TRIS in children's wearing apparel.

CPSC has adopted two amendments to the Children's Sleepwear Standard.

CPSC has finalized technical requirements for sharp points for toys and children's articles and has proposed technical requirements for sharp edges on these products.

CPSC has established procedures for petitioning for exemptions under the PPPA.

CPSC has issued interim rules and procedures and has solicited comments for its responsibility under the National Environmental Policy Act (NEPA).

CPSC has in effect an aggressive voluntary standards program under which it is handling such products as: ladders, chain saws, extension cords, ranges and ovens, etc.

CPSC has developed partnerships with state and local governments and has commissioned state officials in Puerto Rico, Washington, Texas, North Dakota, Montana, Wyoming, Nebraska and Colorado, with others to be activated shortly.

CPSC has developed a draft long-range plan. It puts the agency's efforts into perspective, allowing us to plan our future and evaluate our accomplishments. This is a concept I have long espoused and sought to execute.

CPSC has a management structure and system that is operating efficiently and on schedule (via published schedule of anticipated regulatory development actions).

And most importantly, CPSC has institutionalized operating procedures that allow for direct involvement of the Commissioners in the setting of agendas, the establishment of annual operating plans with quarterly reviews and adjustments, and the development and submission of budgetary and legislative requests.

Emphasis must be given to furthering these major achievements rather than have them take a back seat to political attacks on me.

In June of 1976, I inherited an understaffed agency, with minimal resources, with a backlog of 180 projects, and with an inadequate organizational structure. Within the past 18 months, I believe this agency has turned around to the point where its actions and present activities are well on the way to deserved credibility as an effective regulatory agency.

Although I have long been extremely critical of the Federal personnel system, at no time during my tenure as Chairman has it ever been the policy or practice at CPSC to operate intentionally outside the scope of existing personnel laws. On the contrary, it has been our policy and practice to attempt our reorganization and revitalization of CPSC within the spirit and requirements of CSC rules and regulations. Although I always encourage creativity in problem solving, I am unaware of any improprieties in the utilization of the merit promotion system at any level within our organization or within any specific personnel transaction.

You have my assurance of my unqualified support of merit principles and my commitment to the continued exercise of strong leadership for their effective implementation. At the same time, I intend to continue to speak out strongly for extensive and dramatic modifications in the civil service system, which will allow managers to more effectively manage.

Sincerely,

S. JOHN BYINGTON,
Chairman.

ISAAC ZLOTVER APPLIES AGAIN FOR EMIGRATION FROM U.S.S.R.

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. STEERS. Mr. Speaker, I have been working for some time to secure emigration permission from the Soviet Union for Isaac Zlotver, a dying man who wishes to be reunited with his family living outside the U.S.S.R. I have just learned that he has reapplied for permission to emigrate, and I urge my colleagues to write Soviet officials to urge the approval of this dying man's request that he see once again his children.

I would like to present for my colleagues' benefit, the following appeal that came out of the Soviet Union in behalf of Isaac Zlotver. This week, I will circulate for signatures, a letter to the Minister of the Interior of the Soviet Union urging permission for Mr. Zlotver to emigrate:

APPEAL TO LEONID BREZHNEV ON BEHALF OF ISAAC ZLOTVER BY 30 SOVIET JEWS

We appeal to you with a special request that you intervene personally and prevent the continued suffering of a very ill and lonely man, who has been trying to immigrate to Israel for the past 6 years. Isaac Zlotver of Sverdlovsk. Issac Zlotver was a former deputy colonel who was decorated for his heroism during World War II by medals and awards after completing his military service during the war in Berlin. During the last 14 years, Isaac Zlotver was not employed in his military specialty. Until 1971, Isaac Zlotver was employed in the Sverdlovsk office of the Heat and Electricity Department which is an absolutely open office.

After his daughter emigrated to Israel, Isaac Zlotver was fired from his job, and excluded from the Communist Party. In 1975, Isaac Zlotver was operated on for cancer. Following the operation he needed especially good conditions because of his illness but, in fact, he was deprived of them. He received a refusal to his application for a visa and was thus deprived of being reunited with his children. In 1975, after all of his suffering, his wife also fell ill, and not being able to withstand this tragic life, died in July 1977.

Isaac Zlotver remains absolutely alone, an old man, suffering from the pains of his illness and loneliness, deprived not only of his wife, but also of his family in Israel. He has appealed to all possible Soviet officials who are connected with problems of emigration, but to no avail. He is still firmly denied a visa.

We appeal to you personally and we hope that you will give an order to reconsider Isaac Zlotver's appeals; that you will provide the possibility of an old and sick man who gave so much of himself for the Soviet Union, the right to be reunited with his children in Israel.

Vladimir Slepak, Chana Yellinson, Yakov Cretchenik, Yakov Rakhlenko, Alexander Lerner, Larissa Vilenskaya, Lev Godlin, Victor Yelistratov, Victor Eskin, Dina and Yosef Beilin, Natalya and Grigory Rosenshtein, Inna and Yuli Kosharovsky, Ida Nudel, Igor Rovolfov Vladimir Prestin, Zachar Tesker, Venyamin Bogomolny, Boris Chernobilsky, Yakov Schameyevich, Aaron Gurevich, Raphael Roshansky, Emanuel Richterov, Pavel Abramovich Anatoly Schvartsman, Victor Onaximenko, Gennady Chassin, Vladimir Schiffrin.

HUMAN RIGHTS IN CHINA

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. CRANE. Mr. Speaker, I am pleased to see that at last some attention is being given in this country to the question of human rights in the People's Republic of China. For too many years the scholars, journalists, and politicians of this country have painted an idealized picture of modern life in mainland China. American visitors to the PRC, impressed by the novelty of the experience, and shown only a limited and carefully selected cross-section of conditions on the mainland, have all too frequently returned home to write just those glowing descriptions of the PRC that the Communist leaders in Peking had hoped for. The press, which should have known better, exercised an effective self-censorship out of fear of Chinese Government retaliation.

Now it appears the ice has been broken, and a more realistic picture is emerging. In recent months, a number of articles have appeared in national newspapers depicting the sorry state of human rights inside the PRC. Whatever may be said for or against the Government of that country, it has now become a matter of public record that human rights, in the terms in which they are discussed today, are all but nonexistent in the PRC. Across the board, the state has preempted and suppressed the rights of the individual—political, economic, and social. In the People's Republic of China, totalitarianism has reached its extreme form.

In order to help establish the record on this point, I am inserting into the CONGRESSIONAL RECORD today the most recent of these articles on human rights in China. Written by Mr. Jay Matthews of the Washington Post, this article describes the forced separation of families which results from current Chinese policies. While some scholars might seek to excuse those policies by the observation that "The Chinese have a different set of cultural values to which our notions of human rights do not apply", the solidarity of the family and of the bond between husband and wife is a primary value which cuts across all cultural differences. This is particulary so in China, where the family has extraordinarily deep social and historical roots. The unity of the family is among the most fundamental of human rights. yet it, like other human rights, is granted no recognition in the PRC today. For an understanding of this problem. I highly recommend Mr Matthews' article to the Members.

MARRIAGE CHINESE STYLE: MANY COUPLES FORCED INTO LONG SEPARATIONS

(By Jay Mathews)

HONG KONG.—Chang Tu-li and Liu Mei-hua met and fell in love while attending Shanghai's Futan University. They looked forward to a long and happy married life pursuing their careers as engineers.

Then Chang was transferred in 1969 to a commune in Kwangtung Province 600 miles to the south. He managed to win a short vacation to return to Shanghai and marry Liu, assigned to a factory in that city, but for the next seven years before he finally fled to Hong Kong, Chang never saw his wife for more than a month each year. They only got that much time by exaggerating the seriousness of an old case of hepatitis. Even when the couple produced a son, Chang's appeals to be reassigned to Shanghai fell on deaf ears.

It is an old story in China, illustrating one of the most deep-seated grievances of the family-centered Chinese. Their government has decided to put the interest of the national economy before those of untold thousands of separated married couples. As the Chinese rebel against and adjust to this policy, they reveal interesting things about that one facet of life in China about which foreigners probably want to know the most and yet learn the least—sex.

The forced separations have brought heartbreak, corruption and even some cases of adultery. They have made life nervewracking and sometimes politically dangerous for government personnel officers. Interviews with young officials in China and refugees and sociologists here, along with a close reading of the Chinese press, indicate that the policy has been particularly hard on better-educated young, urban Chinese whose support for the government Peking now says is crucial in turning the country into a modern industrial state.

If there are any signs that the 28-year-old policy on separations, part of a general official callousness toward anything touching on sex, has softened in the post-Mao era, they are not readily apparent.

The system has even affected foreigners. Andrew and Lyn Kirkpatrick, a married student couple from Britain, were forbidden to live together when they arrived in Shanghai late last year for study. They slept in separate crowded dormitories. When a European businessman allowed them to spend the night together a few times at his Shanghai home, he was reprimanded by the local public security office.

Having lived with the policy for so long, most Chinese try to cope with it as best they can—and many have accepted the separations willingly as a necessary sacrifice for the revolution. A group of American birth control experts who recently toured China reported that pharmacies were distributing a popular "visiting pill," a powerful contraceptive that women could take during the occasional visits of husbands assigned far away.

Strolling through public squares in Chinese cities, visitors will sometimes see small posters marked with horizontal arrows pointed in opposite directions. They have been put up by men assigned to a distant city who seek to rejoin their wives by swapping jobs with someone.

Many separations go back to the 1950s. The newly victorious Communist Party, to disperse crucial industries that might be targets of nuclear attack and to develop the countryside, moved whole factories to remote parts of the country. Husbands or wives assigned to those factories had to go along. Rarely could their spouses arrange a job assignment to the same area. Many of them, preferring city life, would not have wanted to move to the remote places if they could.

The most severely affected marriages are those between college students, who are often given assignments far from their university towns after graduation. Also, in recent years, many men with city jobs, unable to find a wife in town, have married rural women, but have been unable to bring them to the city because of severe restrictions on urban growth.

William L. Parish, Jr., a University of Chicago sociologist who interviewed Chan Tu-Li (not his real name) and other refugees here, says Chinese couples do not take such separations as hard as Americans might. "But they're not very happy about them."

"The sexual aspect is not so important," he said, for even young Chinese couples permitted to live together find few moments of privacy.

One couple in Canton "lived in a place that had been partitioned off into bedrooms," he said. "But a guy sleeping in the top of a triple bunkbed in the next room could look down into their bed. They put up a sheet to block the view, but the sheet was full of holes."

In China, what you eat, what you wear and what work you do all depend on where you are registered to live. It is a system that leads some spouses to tolerate separation for fear of something worse.

The relatively few million people who are registered in large cities, like Peking, Shanghai or Canton, are guaranteed a steady supply of grain even during bad times when peasants in some drought-stricken communes must dine on roots. Children who grow up in cities are far more likely to get factory jobs, the pinnacle of prestige and job security for most Chinese. The cities provide schools that will better prepare children for the all-important college entrance examination.

Registration passes through the maternal line and families will suffer dislocations to win the advantages of urban life for their children. One refugee here told of an educated Canton woman who was assigned to rural Hainan Island, married there and had a child. She sent her small daughter back to be raised by the child's maternal grandmother in Canton, to avoid the peasant life that she herself could not escape.

Often, rural wives married to urban husbands will leave their communes for two or three days a week to live in the city, but cannot get permission to move their children into town. They take advantage of the liberal leave time given peasant women in China, whose menstrual cycles involve a good deal of inconvenience because of the shortage of disposal sanitary napkins. But they must work some time in the rural commune, or risk losing the grain rations and income they and their children need.

Such situations create all kinds of opportunities for corruption, as a recent article from the Manchurian city of Harbin revealed. A policeman there, raised by his elder sister, came under great family pressure when the younger brother of his sister's husband "fell in love with a girl from the countryside and wanted to bring her to the city."

Although "his sister kept pressuring him to settle the matter," the policeman said, "this was not in keeping with policy and so set it aside. His sister became angry and his mother said he had no feeling for a relative."

Eventually, the broadcast said, the policeman persuaded his relatives they were wrong.

The prominence given the story suggests that other officials have been more compliant.

At times when criticism of officials is encouraged, such as during the Cultural Revolution of the late 1960s, these tensions come to the surface. "One refugee who had been a personnel officer during the Cultural Revolution said the people who attacked him the most vehemently were married couples he had had to assign to separate work posts," Parish said.

Some separated couples insist it is all for the best. A women's association leader in Shanghai told visiting American psychologist Carol Tavris that although she only saw her husband two weeks each year, "we do not regard separation too seriously, as a bad thing. We accept it as necessary for the good of the country. We must think about our whole family, the motherland, rather than our own small interests."

Despite the Communist marriage law reforms of the early 1950s that ended the several forms of sexual bondage then existing in China, the centuries-old puritanism of the Chinese peasantry and the lack of time or privacy in the workday Chinese world appear to keep sexual activity at a low ebb. Tavris said it was her impression that "Chinese women have moved sexually from ninth-century feudalism to 19th century Victorianism."

The forced separations and the unwillingness of party officials to license marriages for people who have not reached their mid-20s does bring some extramarital sex, however. One refugee told of a Canton woman "who got pregnant by a next-door neighbor. Her husband was older and away a lot because he was a fisherman."

The woman's mother became enraged when she heard what had happened and threw her daughter out of her home, where she was living. The local party committee found her new quarters.

Parish said officials did not appear to punish extramarital affairs too harshly, "unless it was the wife of a party cadre working in another place. Then you could be accused of something called breaking up the family."

If the illicit relationship caused a pregnancy when it was not the woman's turn to have a child under the neighborhood birth control plan, the other women in the neighborhood could be very rough, he added.

"I've heard of some very nasty cases," said Parish, when they would bring the woman up before a meeting of everyone in her work unit "and ask her all the intimate details of her relationship."

Such stories have persuaded many young people to suppress all thought of love or marriage until they have been assigned to their permanent work post and reached the age when marriage is allowed—about 27 for men and 24 for women. In turn, this may be cutting down on the number of couples who suffer separations.

But the absolute numbers remain very large in this very large country.

Tian Li, a 28-year-old railway worker, recently was reunited with and allowed to marry his fiancee, a French woman, after intervention by the highest officials in the country, including Vice Premier Teng Hsiao-ping. A French journalist asked Tian why Teng was so popular in China. First he mentioned Teng's support for an increase in living standards, but then added: "Teng strongly supports the coming together of couples who are separated by their work throughout the country. The people are especially sensitive about this."

INDIVIDUAL TAX RELIEF ACT OF 1978

HON. RICHARD T. SCHULZE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. SCHULZE. Mr. Speaker, last week Secretary of the Treasury Blumenthal appeared before the Ways and Means Committee to present the administration's tax proposals. The Secretary's statement and his responses to questions posed by myself and other member of the committee brought to light the need for certain additional modifications to the tax code. In addition, the hearings highlighted the need for certain long overdue administrative changes. In response to one of my questions, I was shocked to learn that the Internal Revenue Service overwithholds more than $30 billion from American taxpayers each year. This amounts to an involuntary interest-free loan from American workers to the Treasury. In 1973, the average amount overwithheld was $380. Clearly, these are funds which lower and middle-income taxpayers could be using for basic necessities.

In addition, the hearings underscored the impact of inflation on the American taxpayer. Each year, in order to compensate for inflation, most workers receive a cost of living or similar increase in pay. This is done in order to keep the employee purchasing power in line with prices. However, because of the graduated tax rate structure the employee actually loses ground. The income tax

takes a bigger bite each year because the taxpayer is pushed up into a higher bracket and pays a higher precentage in tax. As a result, the taxpayer actually has a reduction in purchasing power.

The need for some form of relief for the elderly, the lower- and middle-income taxpayer and the tuition-paying household is also apparent. In an effort to correct some of these abuses and to partially alleviate the overwhelming tax burden endured by the average American taxpayer, I am today introducing (H.R. 10755), the Individual Tax Relief Act of 1978.

The Individual Tax Relief Act of 1978 contains five sections.

Section I provides for the annual adjustment of the income tax tables and exemption amounts to compensate for the effect on inflation, as I described earlier. This measure will make certain that a taxpayer is not paying a greater percentage of his income merely because of inflation. It is well known that inflation harms our economy in many ways. The annual indexing of individual income tax rates and exemptions will do a great deal to reverse one of the more insidious forms of economic harm. The periodic increase in the standard deduction has been used in the past to attempt to correct the impact of inflation on the tax rates. However, this is a simplistic approach to a complex problem which creates more problems than it solves. For example, charitable giving decreases each time the standard deduction is increased.

Section II provides for the payment of interest at 6 percent on the amount by which a taxpayer's withholding exceeds his actual tax liability. When the graduated withholding schedules were introduced in 1966, a congressional report indicated that it would approximate withholding to within $10 of final liability for 21 million of the estimated 63 million taxpayers subject to withholding. In 1973 only 3.8 million, a little over 5 percent of the 71 million taxpayers reporting withholding, were within $25 of final liability. Almost 88 percent of all taxpayers subject to withholding were overwithheld; the average overpayment was $380. A similar pattern has prevailed since 1966. Current law also provides for a substantial penalty if a taxpayer is underwithheld. For purposes of computation, interest on overwithholding would start to accrue on behalf of the taxpayer on September 1 of the tax year.

Section III provides for a $100 tuition tax credit per household for attendance at elementary, secondary, or vocational schools or at an institution of higher learning. This is an element of tax law which the American people are demanding and which will help to alleviate the burdens placed on those seeking the benefits inherent in education.

Section IV provides for the forgiveness of the long-term capital gain on the sale of a principle residence for taxpayers who have reached age 65. Inflation has had a profound effect on the cost of housing. This fact and the inadequacy of present laws have done little to assist the average retired person who wishes to sell his residence. When faced with the prospect of sale and the resulting capital gains tax many elderly persons choose not to sell. This phenomenon has a chilling effect on the housing market and often leaves the elderly with homes which they can no longer afford or maintain. This proposal would reduce the negative impact of such a sale and increase the availability of housing. The amount of sale proceeds would not totally escape taxation since presumably they would be included in the individual's estate. Moreover, this provision would help to insure that retired persons are less economically vulnerable and dependent.

Section V provides for the exclusion from income of the first $100 of interest income from a savings account or bond. Currently the first $100 of dividend income is exempt from taxation. This provision merely seeks to extend the same benefit to taxpayers who place their funds in savings accounts or buy bonds. In so doing, the provision furthers the concept of tax neutrality.

A Roper poll commissioned by the H&R Block Co. and published in July of last year indicated that approximately 64 percent of the American public believe the tax system is unfair. This is an alarming statistic but one which represents a point of view which is easily justified. Our system of taxation relies on voluntary compliance for its success. If continued compliance by U.S. taxpayers is to be expected, we, in the Congress, must take steps to bolster the tax laws and their administration. I therefore ask my colleagues to support the Individual Tax Relief Act of 1978.

THE PANAMA CANAL TREATIES: "AN ACT OF GRACE"

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. WHALEN. Mr. Speaker, rarely in our long consideration of the issues involved in the ratification of the Panama Canal treaties has an individual come forth with so clear and persuasive a case as does Pulitzer Prize winning columnist George F. Will in the current issue of Newsweek magazine. Mr. Will is known as a thoughtful spokesman for the conservative point of view.

"The treaties can be supported," Mr. Will argues, "as an act of grace by a great nation that, having attended to its interests, does not press its advantages."

Mr. Will expresses refreshing confidence in the international authority of the United States and in our inherent power to do what is right and necessary. Yet he warns:

If in an emergency the United States lacks the will to do what is necessary rather than what a treaty explicitly says the United States can do, then the United States lacks the will to do the unpleasant things it would have to do to protect the canal after rejecting the treaties.

Of particular interest is Mr. Will's contention that the treaties should be ratified even without the amendments which are being proposed in the other body. I commend this article to my colleagues and request permission that it be reprinted in the RECORD:

[From Newsweek Magazine, Feb. 6, 1978]

A VOTE FOR THE CANAL TREATIES

(By George F. Will)

In the fight for the Panama Canal treaties, the Administration's battle flag is gray flannel. Diplomats armed with technical arguments are marching into the teeth of conservatives' cannon. But there is a conservative case for the treaties and it begins by noting that Democratic debate must often be decoded.

When Congress considered subsidizing an SST, the air was thick with arguments about aerodynamics and airline economics. But the argument was not about an airplane; it was about what kind of country this should be. When should government decisions supplement market decisions? More crudely, should government build an expensive plane for "jet-setters"? Today's debate about the canal treaties is only partly about a canal. Beneath arguments about geopolitics and the effect of higher tolls on trade, there is resentment about vanished mastery. In 1954, in Guatemala, the U.S. brushed aside an unsatisfactory government as easily as a waiter brushes away crumbs. But in 1961, across the Caribbean at the Bay of Pigs, an era of shambles began. And now Americans are supposed to feel vaguely ashamed of having constructed the canal that their high-school textbooks celebrated.

A MAN OF THE LEFT

The way to restore Panama to the status quo ante (ante Theodore Roosevelt) is not to cede control of the canal to Panama but to cede Panama to Colombia, from which Panama seceded, with TR's connivance. But Gen. Omar Torrijos' passion for restoration does not extend to dissolving the state where he is supreme. Something like de Tocqueville's compliment to Napoleon (that Napoleon was as great as a man without morality can be) can be paid to Torrijos: he is about as nice as Latin dictators can be. He may be innocent of systematic thought, but he has had the good sense to get perceived as a man of the left. This has intensified the antipathy American conservatives would feel for him anyway, but it has insulated him against the scalding but selective indignation that liberals allocate for some dictators.

Conservatives know that some supporters of the treaties enjoy finding occasions for the U.S. to retreat, preferably apologetically. But it is a bit late for conservatives to become fastidious about liberty in nations with which the U.S. makes treaties. The canal treaties almost certainly will be approved, but after cosmetic improvements. For example, the Senate may insert language that stipulates that "expeditious" treatment of U.S. warships in emergencies means "preferential" treatment in the sense of head-of-the-line passage. Whether a second Panamanian plebiscite will be "necessary" to ratify revised treaties will depend largely on Torrijos' interpretation of Panamanian due process, which is unclear. Dictators usually do not think due process requires inconvenient or unpredictable plebiscites.

Some conservatives want the treaties to affirm the explicit right of the U.S. to intervene to protect the canal. Such a provision would be inconsistent with the purpose of the treaties and unnecessary, given the real rules of the game of nations. It would be inconsistent because the essential purpose of the treaties is to assure Panamanian sovereignty and sovereignty means that no power outside a nation has a right to decide what shall be done within that nation's ju-

risdiction. It is unnecessary for the treaties formally to concede a U.S. right to intervene, because the first law of nations is that "necessity knows no law." Americans must assume that in an emergency their government will do what is necessary to protect what is necessary.

Under the treaties, the U.S. shall have "primary" responsibility for defense of the canal until Dec. 31, 1999. After that, the two nations "agree to maintain" the canals neutrality. A State Department explanation says this does not give the U.S. "the right to intervene in the internal affairs of Panama," but it does give "each nation the discretion to take whatever action it deems necessary." (Emphasis added.) That may seem like a distinction without a difference, but this is a matter requiring reticence.

PARCHMENT BARRIER

Some conservatives believe that unless something like the State Department interpretation is incorporated into the treaties, the treaties will not "settle" the problem of possible conflict with Panama in extraordinary situations. But it is unconservative rationalism to think that all future contingencies can be frozen in ink, like flies in amber. Like most international agreements, the 1903 canal treaty ratified an act of force, and no laws are controlling when force is involved. A Gettysburg ordinance forbade discharge of firearms on part of what became the battlefield. Bismarck said that every treaty contains the unwritten clause *rebus sic stantibus* (so long as things remain the same). A treaty is only a parchment barrier, which means no barrier, to a nation's protection of its vital interests against weaker nations. If in an emergency the U.S. lacks the will to do what is necessary rather than what a treaty explicitly says the U.S. can do, then the U.S. lacks the will to do the unpleasant things it would have to do to protect the canal after rejecting the treaties.

Given the vulnerability of the canal's locks, and today's technology (and ideology) of free-lance violence, it is harder for the U.S. to protect the canal than to protect Europe. The treaties will not limit the U.S. right to guard air and seat approaches to the canal. And by increasing Panama's revenues, the treaties will give Panama an enlarged stake in helping with defense. Panama's only substantial "natural resource" is its narrowness. After the treaties are ratified, the tolls, which have been unreasonably low, will rise to a level that will mean much to Panama but will not be burdensome to the U.S.

AN ACT OF GRACE

The conservative intuition is correct: liberals exaggerate the importance and plasticity of foreign opinion. Latin America will still dislike the U.S. after the treaties are ratified. But the best situation for the U.S. in Latin America is one in which the U.S. is thought of as little as possible and rejection of the treaties would make the U.S. an obsession there.

Some conservatives would have the U.S. assuage its sense of impotence, and frighten its enemies, by frustrating Panama's nationalism. Not since the Mayaguez affair, the U.S. victory over the Cambodian Navy, has so much pride been invested in so small a challenge. The treaties are less instruments of strict equity than instruments in which considerations of prudence and magnanimity converge. Unquestionably, the U.S. has a formal, legal right to remain the cause of Panama's physical division and psychic distress. But proper conservatives insist upon higher standards of behavior than mere legality. Manners are a species of morals and it is ungentlemanly to insist too punctiliously upon formal "rights." The treaties can be supported as an act of grace by a great nation that, having attended to its interests, does not press its advantages.

PANAMA CANAL

HON. ARLAN STANGELAND

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. STANGELAND. Mr. Speaker, I would like to share with my colleagues a letter I received from two Peace Corps workers stationed in the Dominican Republic concerning the Panama Canal Treaties. Their firsthand observations on Latin American and the impact of Senate ratification of the treaties are thought-provoking and certainly worth consideration. Although they presented several reasons why the United States should not ratify the treaties one thought was especially worth noting. Contrary to popular belief, they observed that many Latin Americans feel approval of the treaties will weaken rather than strengthen the position of the United States:

To: Arlan Stangeland, U.S. Representative, of Minnesota, House of Representatives, Congress of the United States, Washington, D.C. 20515, U.S.A.

From: Mr. and Mrs. Daniel Rugroden, Cuerpo de Paz, Apartado 1412, Santo Domingo, Republica Dominicana.

DEAR MR. STANGELAND: Just a short introduction is in order. We joined the Peace Corps about fourteen months ago and are stationed in the Dominican Republic. I have been trying to teach better agriculture practices to farmers in and around a town called Bonao. I have a degree in Agriculture Education from the University of Minnesota, St. Paul campus. I am from Hoffman, where my dad manages the only creamery in Grant County. My wife is a Certified Medical Laboratory Assistant and she has been trying to teach santitation and nutrition to rural housewives. We have gotten to know these people rather well because we have lived with them for over a year now. We also have had the opportunity to travel to Puerto Rico and South America.

Having been in direct contact with the people of Latin American Countries for over a year now we are beginning to understand them a little better. Because we know Spanish, we have been able to find out what the people in these countries think of the United States. And generally, most of these people have a very favorable attitude towards the United States. We fully realize that this favorable attitude is very important for our trade and safety. Therefore, it is the duty of our government to enhance and enrich our relationship with foreign countries. This applies to everything from trade argeements to treaties. However, it would be a great mistake for the United States government to make up a new treaty to give away the Panama Canal Zone. We feel there are several very good reasons for keeping the Canal Zone in the U.S. control.

We feel it may be a different story if the Panama Canal Zone was given to the U.S. due to the spoils of war. Like if it fell into the same classification as the Mexican cession after the Mexican-American War or our possession of Puerto Rico after the Spanish-American War. But it can not be labeled as the spoils of war. True, there was the bloodless war between Colombia and the new Panamanian Government in 1903, but that did not involve the U.S. directly. No, the Panama Canal Zone was bought and paid for according to the Hay-Bunau-Varilla Treaty of 1903. We paid ten million dollars for it. That is more than we paid for Florida, 5 million, or Alaska, 7.2 million. Plus, we are still paying about 2 million to Panama each year. The U.S. has lived up to its side of the treaty, we have paid for it. There is no need for another treaty which gives the canal to Panama. If we apply our Panama Canal Zone Policy to the rest of our treaties, we'd give up a lot of land. For example, should we give back the Louisiana Purchase to France, the Florida Purchase to Spain, the Gadsen Purchase to Mexico, the Alaskan Purchase to Russia, or the Virgin Islands to Denmark because they want it? No, we should keep what we paid for. If we give back just one of these purchases back, it would justify giving them all back. We must keep what we have paid for.

Needless to say, you probably know more about the terms of the original treaty than I do. However, I understand the Hay-Bunau-Varilla Treaty states that the United States Government leases the Panama Canal Zone in perpetuity. The word perpetuity is kind of an ambiguous word. But it has about the same meaning as infinitely or as long as we are around in this life. Based on this terminology the canal is ours now and for as long as we are a country. Let's honor this treaty. We have broken or laid aside enough treaties in the past.

The Panama Canal is one of the greatest achivements of modern mankind. The United States built it from 1904 to 1914 in spite of what skeptics said. We succeeded where the French failed. True, it cost us a fair amount of money to complete it, about $380,000,000. But it was built. It is a symbol of American ingenuity just as much as our present day space flights. We feel there is a certain amount of national pride in the construction of the canal. This national pride would be seriously hurt if we gave the canal away. Our pride as a nation is part of what holds us together as a nation. To know that as United States we can achieve fantastic feats is part of our heritage. It would be unfair to give away part of our national heritage. Not only unfair to us, but perhaps morally damaging to our country.

You are probably more aware of the political situation in Panama right now than we are. It is generally well known the General Omar Torrijos Herrera is a small time dictator. And because he is a dictator, his whole country is subject to his whims. It was the same way in this country for 31 years when General Rafael Trujillo was dictator. If Trujillo decided to kill some Haitians one afternoon—it was done. What Haiti or any other country thought did not matter. General Torrijos of Panama is no different. Once control over the canal is handed over to his government, what is to stop him from raising the canal toll atrociously high or even worse, preventing ships of certain countries from entering the canal zone. In addition, please consider the human injustices that are going on in Panama. Why should we not pursue our human rights theme in Panama? Dealing with the Panamanian Government without mentioning the people's freedom and rights is completely contradictory to our principles. General Torrijos can go around saying that he made the United States bow to him.

Like I, stated in the previous paragraph, Panama is ruled by General Omar Torrijos Herrara, a small time dictator. History has proven that dictators are very unstable. They usually are overthrown rather rapidly. What would happen if General Torrijos fell from power? Who would rule Panama? A government friendly to the west or friendly to the communist countries? Granted, the new treaty does allow us to maintain some control over the canal and preserve our interests. But I point out that according to the new treaty, whoever rules Panama rules the Panama Canal Zone by the year 2000. Because of the strategic importance of the canal, these are very important questions. I now ask; Can we take the chance of its falling under com-

munist influence? No! The free world needs that canal for trade as well as defense purposes. The canal has to remain open to all countries. And the only way to guarantee it being open to all countries is by keeping it that way under our control. We can not afford to take the chance of losing such an important piece of U.S. land.

Many people believe that our Latin American relations will hurt if we do not make a new treaty over the Panama Canal. Our experiences in Latin America have taught us just the opposite. Many of the people in these countries feel that a new treaty over the canal shows that the United States is weak. As I have said before, we have had the opportunity to travel to South America while we have lived in the Dominican Republic. I have gotten the impression from the people of these countries that they find it very difficult to understand the United States' policy. Generally, these people are pro-American. But it is our belief that they are laughing inwardly at us for signing away the canal. A show of power and force influences these people greatly here. If the U.S. seems to be weak by signing away the canal, they may be swayed under the influence of a stronger power, such as Russia. Giving the Panama Canal Zone to Panama will hurt our Latin American relationship in the long run.

Perhaps the best way to sum up the points for not giving the Panama Canal Zone away is by quoting a saying used during the last presidential race. It goes something like this; "We bought it, we paid for it, we built it, and we are going to keep it." I admit that Mr. Ronald Reagan may have oversimplified the issue in this one sentence. But it does bring up several important issues connected with the canal zone. We have paid a lot of money for it. The original treaty does state it is ours for perpetuity. Another point is the national pride that goes along with the construction of such a fantastic engineering accomplishment. There is also the problem of giving into a small time dictator. Not to mention, the possibility of that unstable government falling under the influence of unfriendly countries. The free world trade and security is too valuable to chance it. Our last reason to keep the canal, is to maintain the respect of the Latin-American people.

Realizing that you are a very busy man, we thank you for your time in going over the letter. Thank you very much.

In God We Trust,

DANIEL RUGRODEN.

GEORGE F. WILL BRINGS REASON TO SKOKIE DEBATE

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. EILBERG. Mr. Speaker, one of the most thoughtful pieces of writing on the current debate as to whether the Nazi Party has the right to march in Skokie, Ill., is the February 2, 1978, column in the Washington Post by George F. Will.

As Mr. Will points out, the Nazis make it very clear that they hope to incite violence and racial hatred against Jews and other minorities.

The issue, then, is not the right to free speech. Rather, the issue is the right of the community of Skokie to use every constitutional means at its disposal to prevent the Nazis from abusing the freedom of our Constitution to carry out their violent program of bigotry and genocide.

Very plainly, the motives of the Nazis are totally contrary to the U.S. Constitution. Therefore, it is reasonable for the people of Skokie to take legal efforts to protect themselves against the violence which the Nazis promise to carry out as soon as they have the opportunity to do so.

I offer Mr. Will's commentary for the RECORD because I share his belief that those who defend the constitutional "right" of the Nazis to incite hatred and genocide ignore the fact that these same Nazis would, as Mr. Will states, "destroy the Constitution" if given the opportunity:

NAZIS: OUTSIDE THE CONSTITUTION

(By George F. Will)

During World War II, Sol Goldstein lived in Lithuania, where Nazis threw his mother down a well with 50 other women and buried them alive in gravel. Today he lives in Skokie, Ill., where on April 20 Nazis wearing brown shirts and swastikas may demonstrate to celebrate Hitler's birthday.

Sixty percent of Skokie residents are Jewish, including thousands of survivors of the Holocaust. Aided by the American Civil Liberties Union, the Nazis have successfully challenged an injunction against demonstrations with swastikas, and almost certainly will succeed in challenging ordinances banning demonstrations involving military-style uniforms and incitements of hatred. After 60 years of liberal construction of the First Amendment, almost anything counts as "speech"; almost nothing justifies restriction.

The Nazis say they want to demonstrate in Skokie because "where one finds the most Jews, one finds the most Jew-haters." Beyond inciting hatred, the Nazis' aim is to lacerate the feelings of Jews. Liberals say the Skokie ordinances place unconstitutional restrictions on the Nazis' "speech." But Skokie's ordinances do not prohibit "persuasion," in any meaningful sense. The ordinances prohibit defamatory verbal and symbolic assault. What constitutional values do such ordinances violate?

The Washington Post says the rationale for striking down restrictions on advocacy of genocide is that "public policy will develop best through the open clash of ideas, evil ideas as well as benign ones." A typical Nazi idea is expressed on the poster depicting three rabbis—the Nazi call them "loose-lipped Hebes"—conducting the ritual sacrifice of a child. The Post does not suggest exactly how it expects the development of policy to be improved by "clashes" over ideas like that, or the like idea that Jews favor the "nigger-ization" of America.

Liberals quote Oliver Wendell Holme's maxim that "the best test of truth is the power of the thought to get itself accepted in the competition of the market." Liberalism is a philosophy that yields the essential task of philosophy—distinguishing truth from error—to the "market," which measures preferences (popularity), not truth. Liberals say all ideas have an equal "right" to compete in the market. But the right to compete implies the right to win. So the logic of liberalism is that it is better to be ruled by Nazis than to restrict them.

Liberals seem to believe that all speech—any clash between any ideas—necessarily contributes to the political ends the First Amendment is supposed to serve. But they must believe that the amendment was not intended to promote particular political ends—that there is no connection between the rationale for free speech and the particular purposes of republican government.

A wiser theory is in "The First Amendment and the Future of American Democracy," in which Prof. Walter Berns argues that the First Amendment is part of a political document. There are political purposes for protecting speech, and some speech is incompatible with those purposes.

The purpose of the Constitution, he argues, is to establish a government faithful to the "self-evident" truths of the Declaration of Independence. Holmes said the Constitution was written for people of "fundamentally differing views." That would be an absurd idea about any constitutional community and is especially absurd about this one. The Founders thought rational persons could hardly avoid agreeing about "self-evident" fundamentals. The Founders believed in freedom for all speech that does not injure the health of the self-evidently proper kind of polity, a republic.

So the distinction between liberty and license, between permissible and proscribable speech, is implicit in the Constitution's purposes. Hence restraint can be based on the substance as well as the time, place and manner of speech.

Berns argues it is bizarre to say that the Constitution—a document designed to promote particular political ends—asserts the equality of ideas. There is no such thing as an amoral Constitution, neutral regarding all possible political outcomes.

American Nazis are weak, so liberals favor protecting Nazi swastikas and other "speech." Liberals say the pain to Jews is outweighted by the usefulness of the "clash of ideas" about "loose-lipped Hebes." Were the Nazis becoming stronger, liberals would favor protecting Nazi speech because the "market"—the best test of truth—would be affirming Nazi truth. Besides, restricting speech can be dangerous.

But it is not more dangerous than national confusion about fundamental values. Evidence of such confusion is the idea that restrictions on Nazi taunts and defamations are impermissible because the Constitution's fundamental value is political competition open equally to those who, if they win, will destroy the Constitution and then throw people down wells.

PANAMA CANAL: POLITICIZATION OF THE MILITARY SHOULD BE INVESTIGATED

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. DORNAN. Mr. Speaker, the question of the future status of the Panama Canal has become a matter of international as well as national concern. Its value to interoceanic commerce and national defense has been set forth in many carefully considered statements by various eminent civil and military leaders as well as by perceptive publicists and distinguished Members of Congress.

The latest contribution to the growing literature is a thoughtful article by Allan C. Brownfeld, a well known syndicated Washington columnist.

Drawing upon a number of excellent sources, he stresses the fact that virtually all prominent retired military leaders, in contrast to those on active duty, stress the canal as "vital to U.S. security." He also urges an investigation by the Congress of what he calls the "politicization of the military."

Mr. Speaker, because of the timeliness of the indicated article I quote it, along with the considered statement by four former Chiefs of Naval Operations cited therein, as parts of my remarks: I also call attention to a news story from

the Arizona Republic which quotes Defense Secretary Harold Brown as admitting that any member of the Joint Chiefs who advised against the canal treaties would be "expected" to resign. The entire news story follows the statements of the retired Navy admirals:

IS THE PANAMA CANAL STRATEGICALLY VITAL OR IS IT EXPENDABLE?

(By Allan C. Brownfeld)

All too often, the debate about the ratification of the Panama Canal treaties has been based upon emotional rather than strategic and geopolitical considerations.

Advocates of the treaties argue that the Canal is no longer strategically necessary, that the large new supertankers cannot use it anyway, and that by giving it to Panama we will solidify good relations with Latin America. Opponents of the treaties argue that it is still necessary and that, beyond this, the symbolism of yet another American retreat will not be lost upon those concerned with whether or not the U.S. intends to fulfill its international commitments. Some proponents declare that the Canal is a vestige of American "colonialism," and some opponents say that our national honor demands keeping the Canal.

It is high time—before the nation makes the wrong decision—to cut through much of this rhetoric and to consider the vital question upon which such a choice must be made: Is the Canal strategically vital—or is it really expendable?

It is curious indeed that, under pressure from first the Ford and then the Carter Administrations, our military leaders—such as General George Brown, Chairman of the Joint Chiefs of Staff, have shifted their longtime opposition to relinquishing control of the Canal. As recently as 1976, the Defense Department devoted one issue of The Commanders Digest, published by the Pentagon Office of Information, to the subject: "The Military Value of the Panama Canal." On June 8, 1977, four distinguished admirals, all former chiefs of naval operations, vigorously opposed any give-away of the Canal.

To the argument that the Canal is less important because of the large supertankers which can no longer use it, Admirals Carney, Burke, Anderson and Moorer declared: "We recognize that the Navy's largest aircraft carriers and some of the world's supertankers are too wide to transit the canal. The supertankers represent but a small percentage of the world's commerical fleets. From a strategic viewpoint, the Navy's largest carriers can be wisely positioned as pressures and tensions build in any kind of short range, limited situation. Meanwhile, the hundreds of combatants, from submarines to cruisers, can be funneled through the transit as can the vital fleet train needed to sustain the combatants—Our experience has been that as each crisis has developed during our active service—World War II, Korea, Vietnam and the Cuban Missile crisis—the value of the Canal was forcefully emphasized—sovereignty and control over the Canal Zone and the Canal offer the opportunity to use the waterway or to deny its use to others in wartime. Under the control of a potential adversary, the Panama Canal would become an immediate crucial problem and prove a serious weakness in the overall U.S. defense capability, with enormous potential consequences for evil."

The offhand dismissal by many in the Ford and Carter Administrations of the strategic significance of the Canal on the grounds that it could not accommodate the navy's thirteen large carriers prompted a sharp rejoinder from yet another former chief of naval operations, Admiral David L. McDonald, who held the post from 1963–1967. McDonald stated that, "Carriers as such do not operate independently but as the core of striking forces; and all other units of these striking forces can transit the canal including the very vital logistic support forces. And with Angola plus USSR actions in general I certainly do not think we should permit our presence in the Canal to be diluted."

Similarly, Retired Lt. General Victor Krulak of the U.S. Marines, a former member of the Pentagon's Joint Staff, attacked the argument that the canal was no longer needed because the U.S. boasted a "two-ocean" navy. Measured against its global operational requirements, the whittled-down navy of 1977 does not deserve to be called a two-ocean fleet. It was, said Krulak, a barebones, one-ocean navy. However, if the navy could exercise flexibility in times of emergency by shuttling ships through the canal (rather than resorting to an 8,000 mile detour around the Horn) then it might be described as "two-ocean." Krulak added: ". . . without absolute control of the Canal and the essential contiguous land, the U.S. could not accept the hazard of a one-ocean navy. It would be essential at once to initiate construction of fleets independently able to meet a crisis in either the Atlantic or the Pacific—a massive expenditure which we are now spared only because of our control of the Canal."

How can the fact be explained that almost all prominent retired military men tell us that the Canal is vital to U.S. security, while those on active duty uniformly accept the position of the Administration in power? The politicization of the military is a dangerous trend which is worthy of serious concern—and investigation by the Congress as well. We cannot afford to have military men acting like politicians—far too much depends upon their judgment.

It is not only retired military men who tell us that the Canal remains vital to U.S. security. Hanson Baldwin, for many years military editor of the New York Times, states that, ". . . control of the Panama Canal, for both operational and security purposes, should remain a U.S. responsibility. I feel this quite strongly . . . there is a parallelism in the status quo of the Canal Zone and Guantanamo, and this could be extended by implication to a great many other U.S. land-based facilities. . . . Once a retreat is started, it is hard to stop . . ."

Congress would do well to prevent President Carter's proposed retreat in Panama. The nation's safety, in the long run, may well depend upon what is done.

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
Washington, D.C., June 15, 1977.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: We are enclosing a most important letter from four former Chiefs of Naval Operations who give their combined judgment on the strategic value of the Panama Canal to the United States.

We think you will agree that these four men are among the greatest living naval strategists today, both in terms of experience and judgment. Their letter concludes:

"It is our considered individual and combined judgement that you should instruct our negotiators to retain full sovereign control for the United States over both the Panama Canal and its protective frame, the U.S. Canal Zone as provided in the existing treaty."

We concur in their judgment and trust you will find such action wholly consistent with our national interest and will act accordingly.

Sincerely,

STROM THURMOND, USS,
JESSE HELMS, USS,
JOHN L. MCCLELLAN, USS,
HARRY F. BYRD, Jr., USS.

JUNE 8, 1977.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: As former Chiefs of Naval Operations, fleet commanders and Naval Advisers to previous Presidents, we believe we have an obligation to you and the nation to offer our combined judgment on the strategic value of the Panama Canal to the United States.

Contrary to what we read about the declining strategic and economic value of the Canal, the truth is that this inter-oceanic waterway is as important, if not more so, to the United States than ever. The Panama Canal enables the United States to transfer its naval forces and commercial units from ocean to ocean as the need arises. This capability is increasingly important now in view of the reduced size of the U.S. Atlantic and Pacific fleets.

We recognize that the Navy's largest aircraft carriers and some of the world's supertankers are too wide to transit the Canal as its exists today. The super-tankers represent but a small percentage of the world's commercial fleets. From a strategic viewpoint, the Navy's largest carriers can be wisely positioned as pressures and tensions build in any kind of a short range, limited situation. Meanwhile, the hundreds of combatants, from submarines to cruisers, can be funneled through the transit as can the vital fleet train needed to sustain the combatants. In the years ahead, as carriers become smaller or as the Canal is modernized, this problem will no longer exist.

Our experience has been that as each crisis developed during our active service—World War II, Korea, Vietnam and the Cuban missile crisis—the value of the Canal was forcefully emphasized by emergency transits of our naval units and massive logistic support for the Armed Forces. The Canal provided operational flexibility and rapid mobility. In addition, there are the psychological advantages of this power potential. As Commander-in-Chief, you will find the ownership and sovereign control of the Canal indispensable during periods of tension and conflict.

As long as most of the world's combatant and commercial tonnage can transit through the Canal, it offers inestimable strategic advantages to the United States, giving us maximum strength at minimum cost. Moreover, sovereignty and jurisdiction over the Canal Zone and Canal offer the opportunity to use the waterway or to deny its use to others in wartime. This authority was especially helpful during World War II and also Vietnam. Under the control of a potential adversary, the Panama Canal would become an immediate crucial problem and prove a serious weakness in the over-all U.S. defense capability, with enormous potential consequences for evil.

Mr. President, you have become our leader at a time when the adequacy of our naval capabilities is being seriously challenged. The existing maritime threat to us is compounded by the possibility that the Canal under Panamanian sovereignty could be neutralized or lost, depending on that government's relationship with other nations. We note that the present Panamanian government has close ties with the present Cuban government which in turn is closely tied to the Soviet Union. Loss of the Panama Canal, which would be a serious set-back in war, would contribute to the encirclement of the U.S. by hostile naval forces, and threaten our ability to survive.

For meeting the current situation, you have the well-known precedent of former distinguished Secretary of State (later Chief Justice) Charles Evans Hughes, who, when faced with a comparable situation in 1923

declared to the Panamanian government that it was an "absolute futility" for it "to expect an American administration, no matter what it was, any President or any Secretary of State, ever to surrender any part of (the) rights which the United States had acquired under the Treaty of 1903," H. Doc. No. 474, 89th Congress, p. 154).

We recognize that a certain amount of social unrest is generated by the contrast in living standards between Zonians and Panamanians living nearby. Bilateral programs are recommended to upgrade Panamanian boundary areas. Canal modernization, once U.S. sovereignty is guaranteed, might benefit the entire Panamanian economy, and especially those areas near the U.S. Zone.

The Panama Canal represents a vital portion of our U.S. naval and maritime assets, all of which are absolutely essential for free world security. It is our considered individual and combined judgment that you should instruct our negotiators to retain full sovereign control for the United States over both the Panama Canal and its protective frame, the U.S. Canal Zone as provided in the existing treaty.

Very respectfully,

ROBERT B. CARNEY,
GEORGE ANDERSON,
ARLEIGH A. BURKE,
THOMAS H. MOORER.

[From the Arizona Republic, Wednesday, Jan. 25, 1978]

JOINT CHIEFS FACE "MUZZLING" IF THEY OPPOSE CANAL PACTS

Secretary of Defense Harold Brown admitted on Tuesday that if any of the Joint Chiefs of Staff opposed ratification of the Panama Canal treaties, they would be "muzzled."

They would be free to criticize the treaties, but Brown said if they do they should be prepared to resign. However, he said all support the treaties.

Referring to some former chiefs who oppose the treaties, Brown said they are not as well informed. Some expressed opposition even before both treaties were completely written, Brown said.

Brown made the remarks in answer to a question from the audience after he had finished a speech on the treaties at a dinner sponsored by the Military Affairs Committee of the Phoenix Metropolitan Chamber of Commerce in the TowneHouse.

Brown told another questioner he doesn't think the canal is a white elephant, but doesn't want to overstate its values.

In his speech, Brown said the treaties, subject to Senate approval, are needed to keep Panama as a friend.

"We want the canal protected from external threats involving sophisticated weapons launched from outside Panama," Brown said. "Just as important, we want it protected from guerrilla or terrorist attacks or threats that could originate close by."

The secretary emphasized that the United States "retains all rights necessary to take whatever actions may be required to ensure the canal's neutrality and security. Those rights include the right to use military force."

Basically, the United States feels it is in a better position to have a friendly nation running the canal than to have the United States operate it in an unfriendly atmosphere, Brown said.

In a press conference before the dinner, Brown praised the work of Adm. Stansfield Turner, Central Intelligence Agency director, who had been reported on the way out until President Carter expanded his authority Tuesday morning.

PROTECTING CHILDREN'S HEALTH

HON. ANDREW MAGUIRE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. MAGUIRE. Mr. Speaker, today I am reintroducing the Child Health Assurance Act with technical amendments and two substantive amendments. The first amendment will insure that preventive health services are given a top national priority in the development of a national health plan—especially for children. This amendment will establish a National Commission on Preventive Health. The first goal of the Commission shall be to report on the preventive health needs for the children of the Nation by January 1, 1980 and on the needs of the rest of the population by January 1, 1981.

This Commission shall:

First. Compile and evaluate all the significant evidence concerning the promotion of health and the prevention of disease;

Second. Formulate national goals with respect to the health status of the Nation;

Third. Formulate a national policy for the promotion of health and the prevention of disease and disabling conditions; and

Fourth. Formulate legislation and administrative recommendations for the implementation of the national policy.

The Commission shall work closely with the Department of Health, Education, and Welfare in formulating its recomendations and shall include consumer representatives, professionals from the medical, scientific, mental health, allied health, and education professions, and representatives from Federal, State, and local health departments. The National Commission on Preventive Health shall be able to focus national attention on the importance of prevention as we develop a national health plan for the United States. We cannot afford to continue paying for the increasing costs of medical care without doing everything we possible can to insure that our people are encouraged to develop habits that promote health and are delivered preventive health services on a regular basis. The National Commission on Preventive Health will bring this too long forgotten concept of prevention to the forefront in the development of a national health plan.

The second amendment to the Child Health Assurance Act deletes the earlier penalty section and replaces it with an enforcement procedure which is relatively short and gives the State two opportunities to correct its failure to comply before a cease-and-desist order from the Secretary of Health, Education, and Welfare is given. The entire process should take no more than 6 months. The order is subject to review in a court of appeals, whose decision shall be final except for review by the Supreme Court.

The final order of the Secretary may be enforced in a civil action in a district court brought by the Secretary, or by the beneficiary. A beneficiary may also bring suit to require the Secretary to enforce his own order. The Secretary is required to watchdog States which have been out of compliance, for two quarters after the State is in compliance.

An enforcement procedure is absolutely essential to insure that States actually provide the preventive health services to its child medicaid population This procedure does not withdraw funds from the State, which ultimately punishes the beneficiary, but is designed to expedite enforcement procedures, reduce Federal paperwork, and provide explicitly for private enforcement of this act.

HIGH CUSTOM DUTY RATES TO UKRAINE

HON. PHILIP E. RUPPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. RUPPE. Mr. Speaker, recently, while participating in the Ukrainian Congress Committee this past January 22 in Michigan, I was approached by a group of Ukrainians who requested my assistance in urging the Russian Government to reduce their excessively high custom duty rates. One woman indicated that it cost her approximately $200 to send a couple of items to her family in the Ukraine.

In checking into this matter, I first contacted the State Department and learned that since 1976 custom duty has risen an alarming rate of 600 percent to 700 percent across the board on items previously sent from this country. Our citizens pay all costs on their end in sending these items and thus, bear the full burden of cost responsibility. Interestingly enough, the Russian Government will only permit items to be sent from the United States if they are sent through a U.S. company which has been licensed by their Government. The companies who have acquired a license maintain full responsibility in accepting the package and all costs involved.

I decided to obtain the names of two American companies that deal in this operation to see how much they would charge me to send a $20 pair of shoes and a $100 wool coat. Globe Parcel Service, Philadelphia, Pa., determined that costs would probably be approximately $75. However, Package Express and Travel Service, New York, N.Y., determined that costs would be between $90 to $100. The cost of the items had absolutely no bearing on the charges quoted.

It is difficult for me to accept the high custom duty charges which have been imposed on items sent from the United States to the Ukraine. The State Department acknowledges that they are aware of the exorbitant duties imposed and have asked the Soviets to reconsider these charges. Unfortunately, the Soviet Government has elected to ignore our request.

Each one of us has a loved one that we feel some sort of responsibility for. While we may not necessarily assume financial responsibility for them, we would probably provide them with items to fulfill their needs if they were unable to obtain these things for themselves. For this reason, many of our Ukraine citizens do still have strong ties to their families who remain in the Ukraine and thus, do feel a moral obligation and responsibility to provide their loved ones with items of clothing. It is absolutely shocking to me to have learned that in sending a coat and a pair of shoes, I would have been expected to pay between $75 to $100 to send these items to the Ukraine.

I would at this time like to share with you a letter that I sent to Ambassador Anatoly F. Dobrynin of the U.S.S.R. which was prompted by my awareness of this situation:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 31, 1978.

His Excellency ANATOLY F. DOBRYNIN,
Ambassador, Embassy of Union of Soviet Socialist Republics, Washington, D.C.

DEAR MR. AMBASSADOR: Recently, a matter of great concern has come to my attention which I believe merits your consideration. A short time ago, I was visiting with a group of my constituents who were originally from the Ukraine and who still have relatives residing there. I was advised that they are extremely concerned with regard to the very high duties which they must pay in order to send items to the Ukraine from this country.

In checking into this matter, I learned that high duties do exist. Since many of my constituents do feel a moral obligation to provide for their relatives who still reside in the Ukraine, the existing high duties are placing upon them a financial hardship in meeting what they feel is their family responsibility.

In bringing this matter to your attention, I am hopeful that you will bring this problem to the attention of your government in order that they may review this matter with the future prospect hopefully of a reduction in existing duties.

With best wishes,
Sincerely,

PHILIP E. RUPPE,
Member of Congress.

THE FLOATING—NOT SINKING—DOLLAR

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. WHALEN. Mr. Speaker, we have experienced a decline in the value of the U.S. dollar in comparison with other currencies and have generally found this to be a disquieting situation. As yet, however, we don't know the effects of our falling exchange rate upon the world or upon our domestic economy.

Arthur Okun is one of our country's foremost economists. Now a senior fellow at Brookings Institution, Mr. Okun is a former chairman of the Council of Economic Advisors. Writing in the Washington Post on January 29, he provides considerable insight into the causes and possible consequences of our trade deficit and the resulting oversupply of dollars on world markets. He notes that the United States was the only country which met its target for economic growth in 1977 and that last year's economic developments contrast sharply with what happened in 1975.

I believe Mr. Okun gives us a good guide to the currency fluctuations of recent years. Thus, I commend the article to the attention of my colleagues and other readers of the CONGRESSIONAL RECORD:

[From the Washington Post, Sunday, Jan. 29, 1978]

THE FLOATING—NOT SINKING—DOLLAR

(By Arthur M. Okun)

Our dollar has been weak in foreign exchange markets relative to other currencies mainly because the U.S. economy has been *strong*. The current episode of our falling exchange rate presents a sharp contrast to the recent experience of the United Kingdom and to our own experience earlier in the decade: It is *not* the result of above-average inflation rates or poor economic performance.

In 1977, the United States was the only capitalistic industrial country that met its target for economic growth; in the process, we generated higher demands for all types of goods, naturally including imports. And the rise in U.S. imports bolstered the sagging growth curve of other economies—perhaps even saving them from renewed recession. With our imports growing and our exports stagnating because of the weak economies of our trading partners, a lot of dollars were pumped into the rest of the world. Although foreign investors have a strong appetite for dollar securities, it isn't unlimited. With a U.S. trade deficit of $30 billion, it was hardly surprising to find an excess supply of dollars on world financial markets and a resulting adjustment of exchange rates, which lowered the value of the dollar relative to the average of other major currencies by 4½ percent in 1977.

The developments during 1977 were precisely the reverse of what happened during 1975. At that time, the U.S. economy was the sickest in the world, and we were spreading our acute recessionary disease abroad with an 11 percent decline in our real imports. Because we ran a substantial trade surplus, dollars were scarce throughout the world, producing an average rise of the dollar in foreign exchange markets by about 8 percent. That increase in the value of the dollar evidently created an overvaluation, making imports excessively attractive to us and our exports unduly expensive to others. When trade flows finally adjusted to this change in exchange rates after a year or two, that swelled our trade deficit of 1977.

In short, exchange rates have been responding to real phenomena: a U.S. trade deficit that is unsustaining high and surpluses in Germany and Japan that are unreasonably large. While exchange markets can get caught up in a speculative fever and can overshoot, there is no evidence to date that they have gone haywire, or even that they have necessarily completed the appropriate adjustment. Our exchange rate is still a few percentage points higher than it was three years ago, compared to the average of other major currencies; nobody can say with any conviction that the dollar is now undervalued (or still overvalued). To set a target for the exchange rate and try to maintain it would be like freezing the thermometer.

There are, to be sure, some unwelcome consequences of the decline in our exchange rate. First and foremost are higher prices of imports from Japan and Germany, and the additional inflationary effects on prices of U.S.-made products that compete with those imported goods. The drop in the dollar's exchange rate during 1977 is likely to add an extra half a point to our price level over the next year or two. Second, the instability of foreign-exchange values creates anxiety and uncertainty in international capital markets. When exchange markets are gyrating, foreign investors holding dollar bonds and stocks cannot feel secure about the ultimate purchasing power of those assets over the goods they buy. In a period of sharply fluctuating exchange rates, people may make very different bets on the future course of those rates, leading to large and destabilizing portfolio shifts. The results are regrettably disruptive for international and even domestic investors, although they do not add up to a crisis by any stretch of the imagination.

Not all of the consequences are undesirable. American industries that export heavily and those that compete strongly with German and Japanese imports will generate more jobs and earn more profits as a result of the movement of exchange rates. According to one statistical estimate, the decline in the exchange rate of the dollar during 1977 should ultimately reduce our trade deficit by about $7 billion below what it would otherwise be.

To the countries with rising exchange rates, the costs and benefits are reversed. They will get the boon of lower inflation from cheaper imports and the bane of lower export demand. I must say that some of the complaints from abroad do not make sense. For example, many comments from Germany fail to recognize the anti-inflationary benefits to them of lower import prices—even though the Germans stress their eagerness to control inflation. Some foreigners clearly want us to feel embarrassed by the drop in the dollar's exchange rate.

Others argue invalidly that U.S. oil imports have been the major source of the weakness. In fact, oil imports accounted for only about a third of the increase of total U.S. imports during 1977—in large measure an inevitable consequence of our economic growth. Moreover, the U.S. oil imports contribute little to the excess supply of dollars since the OPEC countries have been and remain very willing holders of dollar assets. To be sure, the United States needs an energy bill, and I hope the Senate conferees have made a New Year's resolution to achieve a prompt compromise on what is shaping up as a constructive long-run program. But no conceivable energy bill can lower our oil imports significantly for some years to come.

The plain fact is that some countries have been relying on rising exports to lead them back to prosperity, rather than taking the steps needed to promote growth at home. Their strategy can succeed only if the United States is willing to accept huge trade deficits and to go along with an artificial pegging of exchange rates to sustain that. It is clear why those countries don't enjoy the adjustment of exchange rates, but it should be equally clear why we cannot let them have their way.

Actually, U.S. policies in recent months have had the healthy effect of inducing some of our trading partners to reexamine their economic policies. Japan has responded in an ecouraging way by adopting a more stimulative fiscal policy and by starting to liberalize its restrictive policies on imports. Other countries have to be mature enough to face their responsibilities as well.

Meanwhile, the United States must be alert to the causes and consequences of its trade deficit and its falling exchange rate. Our fundamental competition position will improve over the years ahead if we can strengthen productivity, spur capital forma-

tion, slow the wage-price spiral, and economize on imported energy. But we must continue to refuse to freeze the thermometer. Our government should be buying dollars in exchange markets only when the markets are truly disorderly. And U.S. monetary policies ought to be focused on unemployment rates, inflation rates and investment rates—not exchange rates. We surely don't want to bring about the good old days of 1975 with a strong exchange rate and a weak economy.

PHILADELPHIA LAUNCHES PROGRAM OF FREE EYE EXAMINATIONS FOR SENIOR CITIZENS

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. EILBERG. Mr. Speaker, I am very pleased to be able to report that a new program has been launched in the city of Philadelphia to provide free eye examinations for senior citizens in order to help prevent blindness among older people.

The new program is being offered by the Philadelphia Committee for the Prevention of Blindness, which will conduct a preventive program of eye examinations and followup services for approximately 2,500 Philadelphians age 60 and over through a $150,000 contract with the Philadelphia Department of Public Health.

Mayor Frank L. Rizzo, in announcing the city's participation in this effort, noted that this was one more effort of the Rizzo administration to bring vitally needed services and help to Philadelphia's senior citizens. The mayor said:

Many older people do not get their eyes examined regularly and do not realize that there are now medical treatments available which can save their eyesight provided they are treated in time.

The Philadelphia Committee for the Prevention of Blindness has developed this fine program to reach out to our senior citizens—particularly at the Health Department facilities that they use, such as the District Health Centers and the Older Adult Centers—and to help them get whatever eye care they need.

I am really pleased that the City can join in partnership with the Committee in this worthwhile endeavor. This is a good example of the ways in which private groups can work together with government to make life better for all our citizens.

Dr. George Spaeth, director of the glaucoma service at Wills Eye Hospital and president of the Philadelphia Committee for the Prevention of Blindness, noted that the most significant causes of blindness are the diseases that occcur among the older population. He said that the program would be based on face-to-face work with older people, including small group education programs and individual interviews, to find those who have not had their eyes examined in the past year. He said:

When people agree to have their eyes examined we will make appointments for them with ophthalmologists at Wills Eyes, Pennsylvania, Jefferson, Temple, and Hahnemann Hospitals, as well as the Scheie Institute and the Pennsylvania College of Optometry. We will also arrange for free transportation to and from the hospital and will have a member of our staff at the hospital to help them through what might be a strange and confusing situation.

Dr. Spaeth explained that those participating would be given a full eye examination, not just a superfiicial screening which might miss some disease condition and falsely reassure the individual that his or her eyes were in good condition. He said:

The examinations we will offer include a professional review of the person's medical history, taking of blood pressure, determination of visual sharpness, pressure check for glaucoma, examination of the inside of the eye by a light instrument, refraction of the eyes, and any special studies that might be indicated.

According to Martin Kaplan, director of the Committee for the Prevention of Blindness, the committee staff will follow up each person to make sure that the findings of the eye examination are understood and that arrangements are made for any necessary treatment:

In most instances the cost of the examinations and treatment, such as surgery, will be covered by the individual's medicare or medicaid coverage or by a third-party hospital insurance program, such as Blue Cross. We have limited funds in our budget to pay for the examinations when a person does not have any of this kind of health insurance and, although we cannot pay for treatment, area hospitals have indicated that no one will be refused needed treatment if they are without such resources.

If eyeglasses are prescribed, a limited amount of funds are available to pay for corrective lenses at a reduced rate which has been arranged with some opticians. The individual would have to pay for their frames; however, as many opticians have old frames which have been returned by their clients, these could be used at no charge should the individual wish.

Individuals who would like further information on the program, or senior citizens who would like to make an appointment to have their eyes examined should call the committee's office—925–3364.

The Philadelphia Committee for the Prevention of Blindness was formed in 1974, with representatives from business, social service, labor, medicine, optometry, nursing, government, and services to the blind agencies. Incorporated in 1976, its board of directors includes opthalmologists, physicians, optometrists, and other health personnel, social workers, specialists in services to the blind, and community leaders.

MR. FRED MEYER, AN AMERICAN STORY

Hon. John E. "Jack" Cunningham

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. CUNNINGHAM. Mr. Speaker, it is always heartening to see the success story of someone who exemplifies the American work ethic. Mr. Meyer of Fred Meyer, Inc., has just such a story. This man, who came West to pan for gold and ended up as one of the most successful American retailers, is to be highly commended.

He takes the mystique away from business many people seem to share, saying, "All we do is look around, and what people want we try to give them." That is what retailing is all about, and that is why he has been so successful.

Mr. Speaker, I offer the following article from Forbes magazine that tells Fred Meyer's story for my colleagues' review:

[From Forbes, Jan. 23, 1978]

NOTHING REALLY CHANGES

The son of a Brooklyn grocer, Fred Meyer came west around the turn of the century to pan for gold in Alaska, sold coffee, tea and spices door-to-door in a wagon, and rented space to retailers way before public markets had been replaced by supermarkets. Now 91, he is still chairman of the executive committee of Fred Meyer, Inc., the $750-million Portland, Ore.-based food and general merchandise chain. Today the Meyer chain has 62 stores in the Pacific Northwest, a flourishing wholesale food operation, and a net income in 1976 of $14 million.

"There are three basic things man has needed since he was civilized," says Meyer. "He had to have food, clothing and a place to live. Even when people lived in caves, if you had a monopoly on the caves you'd have done quite well. Well, we're in the food business, the clothing business, and now we have the mortgages on the homes."

What's that about mortgages? In 1975 the company acquired a savings and loan operation, becoming the first food retailer to do so. Of the 24 branches, 21 are located right in Meyer stores, and to attract savers, Meyer offers savings "specials" like a pound of coffee or a steak with each new account. While many of the savers are small first-time accounts, earnings from the S&Ls this year should reach an estimated $1.1 million, an increase of 161 percent over the previous year.

Last fall Meyer announced that he was entering the travel field, offering travel packages at prices lower than similar tours offered by travel agencies. "We don't know if we know a lot about the travel business," Meyer explains, "but the cost of entry is low, and we hope we know more than our customers."

All of these new services fit Meyer's basic philosophy that shopping should be simple, maybe even fun: "Going to the store should be like going to church used to be. It should be a social occasion." The typical Meyer complex, whether it is a single store with departments or a series of stores in one of Meyer's 37 shopping centers, offers customers services ranging from a pharmacy, food store and clothing store to a garden center and home-improvement center. Each department has a manager who is a specialist in his particular merchandise area, but decision-making is centralized at the divisional level. As the older stores are remodeled and expanded, nonfood merchandise is also taking a greater portion of sales so that the newer stores really look like department stores with one department devoted to groceries.

Meyer is one of those old-time executives who is fanatical about holding down the overhead. Executives must pick up their own mail and supplies and are addressed in interoffice memos only by their initials (to save the time required to type out full names). Even Meyer's late wife, who served as secretary-treasurer until her death in 1960, was known only as ECM. Buyers who visit Meyer's warehouse-like corporate headquarters find no chairs in the buying room—to discourage

long visits—and Meyer's own office is a jumble of old (not antique) furniture, yellowing maps and bare floors.

But putting his money where it counts has helped Meyer sustain net profit margins of 1.9 percent, better than those of big national chains like Winn-Dixie Stores (1.7 percent), Lucky Stores (1.5 percent) or Safeway (0.9 percent).

While Meyer's style clearly still runs the company, he has not made the mistake of trying to do everything himself. Although Meyer calls them his "boys," Oran Robertson, Meyer's chief executive officer and heir apparent, and President Cyril Green have been with the company for over 25 years and are highly respected within the industry. Jack Crocker, who was president of Fred Meyer, Inc. when it was first opening its Levi jeans centers to capitalize on the boom in blue jeans, is now chairman of Super Valu Stores, the highly successful food wholesaler and general merchandiser, doing the same thing with Super Valu's County Seat stores.

Fred Meyer has a long list of retailing firsts. He opened the world's first self-service drugstore in 1930. When cigarettes were still sold by the package, he sold them by the carton, just the way he sold prepackaged beans and sugar. "We were one of the first grocery stores with paperback books," claims Meyer, whose old-fashioned glasses and bow ties have not changed over the years. "The department stores had a monopoly on them, but today I guess we're the main source of paperbacks."

He argues there is really nothing new under the retailing sun. "Public libraries invented self-service, not retailers." The modern shopping center, Meyer says, is just a new version of the old public markets. He doesn't think of himself as a pioneer. "All we do is look around, and what people want we try to give them."

Fred Meyer, Inc. finally went public in 1960, and its 5.6 million shares recently traded at 25, an alltime high, nine times last year's estimated earnings. Meyer owns about 30 percent of the stock, worth on paper a hefty $43 million. But that doesn't impress the old man, who says: "I think we would have made more money if we bought land, but we had a good banker who said, 'Go into merchandising.' And we did."

HILLSDALE COLLEGE AGAINST HEW

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. SYMMS. Mr. Speaker, the following column by Bob Wiedrich which appeared in the January 10th issue of the Chicago Tribune describes a harrowing tale of the valiant struggle of one private college in Michigan which is facing off against the bureaucratic edicts of the overbearing department of HEW. HEW alleges that, because 205 of Hillsdale College's students accept some veterans benefits or Government loans, Hillsdale must comply with all of HEW's rules and regulations which pertain to schools who accept Federal aid. Yet Hillsdale prides itself in its independence from Government hand-outs while at the same time practicing an open admissions system offering equal consideration to any minority who chooses to apply to the college. Hillsdale has stood firm and has, over the 3 year period of this battle, raised a $29 million emergency fund, $14.7 million of which is earmarked for scholarships to cover, among others, those students whose Federal assistance is subject to HEW's whim. I am particularly proud to make note of the fact that our colleague, PHIL CRANE himself a graduate of Hillsdale, has headed up this impressive fund raising drive. Both he and Hillsdale have distinguished themselves in this remarkable fight for educational freedom. I commend this column to your reading and believe you will join me in extending to PHIL and to Hillsdale a hearty "Well done!"

The column follows:

[From the Chicago Tribune, January 10, 1978]

HILLSDALE COLLEGE VS. FEDERAL IDIOCY

(By Bob Wiedrich)

David and Goliath tangled over the weekend. And we bet you didn't even notice.

Sunday was the deadline for tiny Hillsdale College in southern Michigan to bend to the will of Uncle Sam's mighty might or lose federal aid to some of its students.

To say the least, the battle is unequal Hillsdale only has 1,028 students this semester. The United States government represents more than 200 million citizens.

However, the college has one thing going for it—its determination to resist to the bitter end attempts by the Department of Health, Education, and Welfare to force its idiotic will on the campus.

So the only people likely to become casualties of this fracas with Washington are the 205 young men and women who receive some form of federal aid to further their educations at Hillsdale.

The money they receive amounts to $300-000 annually.

Fortunately, even that is not a certainty. For the college administration and its many supporters are not taking Uncle Sam's guff lying down.

They have launched a three-year, $29-million fund raising drive, $14.7 million of which will be earmarked for scholarships, including some for the kids being threatened with intellectual extinction by the government.

And to date, $12 million has been received from admirers of the 133-year-old school that never has accepted any form of government aid and has no intention of starting now.

And therein lies the absolute bureaucratic stupidity that has cast Hillsdale College in a confrontation with HEW which it neither sought nor deserves.

Here is the scenario:

HEW says that Hillsdale is a recipient institution of federal aid because the 205 students, as individuals, accept veterans' benefits and government loans to pay for their tuitions.

According to Washington, that means the college has to toe the line and conform with all of HEW's affirmative action programs and other requirements imposed on educational institutions foolish enough to accept the government dole.

HEW maintains that Hillsdale must comply with government laws banning discrimination on the basis of sex.

And that by refusing to sign a statement swearing that it will not so discriminate, Hillsdale College has violated the law and should be penalized by a withdrawal of all forms of federal aid.

The obvious flaw in that thick-headed logic, of course, is that the school receives no federal aid and does not discriminate. Forty-five per cent of its student body are women.

So the quarrel obviously boils down to one simple fact—Hillsdale College's refusal, as a matter of principle, to swear in writing that it will not do what it never has done.

Since Hillsdale was founded in 1844, the campus has been open to blacks and females. That, incidentally, was long before the Civil War and Abraham Lincoln's Emancipation Proclamation.

So Hillsdale College has been far ahead of the United States government in practicing what it preaches—equal rights for all Americans.

Nevertheless, the HEW edict stands. And according to school officials, they have been notified to appear Jan. 16 at an HEW administrative hearing in Denver, which makes about as much sense as the rest of Uncle Sam's dingaling gig.

College authorities are not the only people incensed by Washington's heavyhanded intrusion on the free spirit at Hillsdale.

College President George C. Roche, currently on leave of absence to run for retiring Republican Sen. Robert Griffin's seat from Michigan, reports having received individual donations to the college fund of as much as $10,000.

And Joseph T. Gill of Palatine, Ill., an accountant with a son who is a junior at Hillsdale, was sufficiently angered to write this column an eloquent letter in defense of the school as a last bastion of independence and free enterprise.

"Having no legitimate leg to stand on is only a small challenge to the ingenuity and cleverness of those who would be our keepers," Gill wrote.

"Having discovered that roughly 20 per cent of the Hillsdale enrollment are recipients of government aid as individuals under several programs, the government has seized on this reed in the desert to declare the institution itself to be a recipient of federal funds. . . .

"That these students who freely chose Hillsdale could have chosen any other school makes no difference.

"They are interested only in placing freedom under the collectivist yoke and, if they have to twist the intent of Congress and distort the meaning of the law to accomplish that purpose, so be it."

Gill rightly points out that George Orwell's 1984 is but a scant six years off. And that the knuckleheads at HEW are apparently doing their best to speed up the novelist's terrifying schedule for an end to individual freedom by trying to topple Hillsdale College now.

This column normally does not hustle readers for contributions, however worthy the cause. But in this instance, if you can spare a dime, drop it in the mail to Hillsdale College, Hillsdale, Mich. 49242.

Then write a rousing indignant letter to your congressman and senators voicing your outrage at the idiocy that prevails along the Potomac.

THE RECORD CELEBRATES ITS 100TH YEAR

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. MAZZOLI. Mr. Speaker, I would like to take this opportunity to extend my congratulations to the editor and the staff of the Record, the publication of the Roman Catholic Archdiocese of Louisville which is celebrating its 100th year of publication.

The Record does an excellent job of informing the people of the Archdiocese of Louisville—and the community at large—about both religious and secular matters of concern.

In confusing times, such as we live in today, Reverend William Zahner, editor

of the Record, and his staff provide a fare of articles and columns designed to place today's event into a moral and ethical perspective.

Father Zahner, an energetic and talented priest-newspaperman, has given strong leadership to the Record. And, in his tenure as editor, the paper has won several awards for merit in newspapering.

The Record can take pride in its first 100 years of service to the archdiocese and to the whole community. I wish it another 100 years of achievement.

ARE WE THE SUPPLIER OF MILITARY WEAPONS FOR THE WORLD?

HON. PARREN J. MITCHELL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. MITCHELL of Maryland. Mr. Speaker, on numerous occasions I have expressed open opposition to continued U.S. involvement in supplying military weapons to the Middle East countries. Yet, the Carter administration is contemplating another transaction involving the sale of defense aircraft vessels from the United States to Saudi Arabia.

We have noticed efforts by seven members of the Senate Foreign Relations Committee to urge the administration to delay approval of the sale of 60 F–15's to Saudi Arabia. However, a delay in these sales would not be enough, since generally, it is known that even with delays, the eventual transactions are bound to take place.

Currently, our Nation and others are witnessing a most historical occurrence. The two countries, Israel and Egypt, appear to be reaching the stages of peace as they continue to negotiate in terms of each country's perspective and proposed solutions to a conflict which has intensified itself within the last century.

We can continue to hope that the final outcome of these intense negotiations will be peace. Although we must also face the possibility of another war between these two forces. While we hate to think that war may be a result of the Middle East peace talks, it is unreal to deny that the further occurrence of war is a possibility and that Saudi Arabia might participate in such a war in light of its military capabilities.

If at any time we are to concern ourselves with the elimination of U.S. military arms sales to the Middle East, it should certainly be now, during a time when delicate peace talks are taking place between Israel and Egypt.

While we are of course concerned with the developments in the Middle East countries, let us not forget how our continued sales of defense mechanisms would interfere with our own domestic economic priorities. It is impossible to think in terms of a balanced budget for our Nation if we cannot meet the economic and social welfare needs of our people while our military programs continue to escalate.

The United States has cited human rights and the maintenance of a system which advocates fair opportunities for all as a goal which our Nation has professed as its own. However, it is ironic that we speak of such a high goal and continue to even consider selling defense weapons to other countries.

Particularly, at a time when Egypt and Israel are involved in an attempt to achieve an objective which our Nation professes to hold in such high esteem—peace.

As we monitor further developments in the area of U.S. sales of defense mechanisms to foreign countries, let us remember that at this time, we are contemplating an action which could contribute directly to the perpetuation of war between Israel and Egypt who are trying so hard to reach an agreement. Their desires are so like our own country—to live harmoniously and be at peace with neighboring countries, and to eventually be an integral part of an eventual worldwide peace.

The sale of the F–15's is but one isolated incident. However, it typifies many prior transaction between the United States and our foreign allies. The pattern remains the same. First, there is contemplation about the sales. Next there is a cry for a delay in these sales. Finally, the inevitable happens; the transaction is completed and we have again involved ourselves in the destruction of lives, property, and the morality of those countries that were plagued by war. Hopefully, the pattern will be different in this case and the sale of the 60 F–15's to Saudi Arabia will be canceled. The United States can no longer remain the weapon supplier for the world.

CRIME SUBCOMMITTEE TO HOLD HEARINGS ON CIGARETTE BOOTLEGGING

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. CONYERS. Mr. Speaker, the Subcommittee on Crime of the House Committee on the Judiciary has scheduled an initial set of hearings on H.R. 8853 and H.R. 10066, which address the problem of racketeering in the sale and distribution of cigarettes.

The first 2 days of hearings will be February 15, 1978 and February 28, 1978, beginning each day at 10 a.m. in room 2237, Rayburn House Office Building.

At the hearings on February 15, the subcommittee will take testimony from Members of Congress who have sponsored the major legislative proposals in this area. The subcommittee currently has pending before it 21 bills on the subject.

Those wishing to testify or to submit a statement for the record should address their requests to the House Committee on the Judiciary, Subcommittee on Crime, 207–E Cannon House Office Building, Washington, D.C. 20515 (telephone: 202–225–1695).

GEN. DANIEL JAMES, JR.

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. CLAY. Mr. Speaker, a great black American was honored on January 26, 1978, on the occasion of his formal retirement from the U.S. Air Force.

Gen. Daniel James, Jr., known affectionately to many of us as "Chappie" has set an unparalleled record of achievement in the history of the armed services. Of the hundreds of thousands of black Americans who have served their country ably and honorably, General James is the only one who was permitted to rise to the exalted rank of four-star grade. He alone will be remembered in the military mind of America as a leader of men.

His sparkling level of performance would easily place him high among the most respected members of the armed services. It is not just his outstanding record as an Army officer for which he should be honored. Chappie James is a living symbol of the kind of justice that is not in abundance in this country. Our youngsters need to know that once in a rare while a black man is properly rewarded for his sterling character and proud patriotism.

I wish to take this opportunity to share with my colleagues a few words taken from the program booklet of his official retirement ceremony:

General James is widely known for his speeches on Americanism and patriotism for which he has been editoralized in numerous national and international publications. Excerpts from some of the speeches have been read into the Congressional Record. He was awarded the George Washington Foundation Medal in 1967 and again in 1968. He received the Arnold Air Society Eugene M. Zuckert Award in 1970 for outstanding contributions to Air Force professionalism. His citation read ". . . fighter pilot with a magnificent record, public speaker, and eloquent spokesman for the American Dream we so rarely achieve."

Other civilian awards that General James has received include the following: 1960—Builders of a Greater Arizona Award; 1970—Phoenix Urban League Man of the Year Award, Distinguished Service Achievement Award from Kappa Alpha Psi Fraternity; 1971—American Legion National Commander's Public Relations Award, Veteran of Foreign Wars (VFW) Comander in Chief's Gold Medal Award and Citation; 1975—Capital Press Club. Washington, D.C., Salute to Black Pioneers Award; 1976—Air Force Association Jimmy Doolittle Chapter Man of the Year Award, Florida Association of Broadcasters' Gold Medal Award, American Veterans of World War II Silver Helmet Award, United Service Organization Liberty Bell Award, Blackbook Minority Business and Reference Guidance Par Excellence Award, American Academy of Achievement Golden Plate Award, United Negro College Fund's Distinguished Service Award, Horatio Alger Award, VFW Americanism Medal, Bishop Wright Air Industry Award, and the Kitty Hawk Award (Military). He was awarded honorary doctor of laws degrees from the University of West Florida in 1971, the University of Akron in 1973, Virginia State College in 1974, Delaware State Colege in 1975, and St. Louis University in 1976. He was also named Honorary National Commander, Arnold Air Society in 1971.

General James is a command pilot. He has received numerous military decorations and awards which are listed in the attached fact sheet.

General James is married to the former Dorothy Watkins of Tuskegee, Alabama. They have a daughter, Danice (Mrs. Frank W. Berry); and two sons, Daniel II, a captain in the Air Force, and Claude.

BOOK REVIEW

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. BROWN of California. Mr. Speaker, on Thursday last I inserted in the RECORD a few selected quotations from a new book about Presidential-congressional relations entitled "The Prospect for Presidential-Congressional Government," by Cohen, Hughes, Lepawsky, Moos, and Vile. I will not repeat the laudatory statements which I made at that time, but refer the reader to pages 2159–2160 of the CONGRESSIONAL RECORD. Today I would like to complete the quotations from Professor Lepawsky's last chapter of the book, those quotations dealing more specifically with the increasing role of the Congress:

PART II.—CONGRESSIONAL ASSUMPTION OF STRATEGIC PRESIDENTIAL POWERS

In the readjustment of functions and reallocation of responsibilities now underway, Congress is sharing in or encroaching upon some highly strategic powers and prerogatives that have been either constitutionally assigned to or historically appropriated by the Presidency. These include: (1) military decision and foreign policy, (2) the intelligence function and executive privilege, and (3) the exercise of emergency powers.

* * * * *

The War Powers Act of 1973 was the first general restriction imposed by Congress on the President's role as commander in chief of the armed forces. The fact that this "constitutional" legislation was initially vetoed by President Nixon, and then re-passed over his veto by the required two-thirds Congressional majority, will not readily be forgotten, even though cogent arguments may be raised in the future for restoration of the President's powers of military action. When the prestigious Senate Majority Leader, Mike Mansfield of Montana, announced, "There will be no more Vietnam wars," he was referring to the series of Presidentially declared wars, including the Korean War, that followed the Second World War.

This newly revised system of Presidentially-and-Congressionally shared warmaking and war-ending was enforced in 1975, during the delicate terminal stages of our withdrawal from Southeast Asia (including Cambodia as well as Vietnam). Despite the military complexities and diplomatic embarrassments in which we were embroiled, the new decisionmaking arrangement effectually met the challenge in 1975. Since then, Congress has delved deeper into the area of strategic policy and diplomatic decision previously occupied unilaterally by the President. In the earliest of these instances, President Ford deferred to Congressional opinion, while President Carter disregarded it. Where the facts involved are indecisive and the range of possible decisions is wide, the President may prevail. But at some point, Congress will resist, and it now possess more means than it did previously to inject its will into the decision process.

The newer interplay of diplomatic and military responsibilities, involving both policy or strategy and operations or tactics, now embraces recently recognized Congressional powers along with traditionally essential Presidential functions. For example, because the Senate possesses the constitutional power to participate in the treaty-making process, this body had become concerned by 1969—initial year of the Nixon Administration—over a Presidential initiative of longer standing, that of independently entering into "executive agreements" with foreign countries. Whether or not these agreements were in pursuit of duly negotiated treaties or previously established policies, over 5,500 of them had been made since the end of the Second World War, including especially critical commitments by President Nixon.

In a definitive 1969 resolution, therefore, the Senate declared that "a national commitment by the United States results only from affirmative action taken by the executive and legislative branches of the United States Government by means of a treaty, statute, or concurrent resolution of both Houses of Congress" specifically providing for: the use of armed forces of the United States on foreign territory; or a promise to assist a foreign country, government, or people by the use of armed forces or financial resources of the United States, either immediately or upon the happening of certain events.

Attacking the executive agreement question more directly was a 1972 Congressional act sponsored by Senate Foreign Relations Committee member Clifford Case of New Jersey. The Case Act requires the transmission of all executive agreements to Congress within sixty days unless they are secret, in which case they are to be routed to the Senate Foreign Relations Committee and the House International Relations Committee. The House of Representatives' involvement in the treaty-making process to this extent, along with its International Relations Committee's recently enlarged jurisdiction—ranging explicitly from "intervention abroad and declarations of war" to "relations of the United States with foreign nations generally"—has now augmented the movement toward Congressional assumption (or resumption) of strategic powers previously monopolized by the President.

* * * * *

The intelligence function and executive privilege

Here too, the Nixon Administration had overreached itself. In April 1973, at a joint hearing of several Senate subcommittees, including the Judiciary Committee's Subcommittee on the Separation of Powers, the Attorney-General, Richard Kleindienst, shocked the Senators by asserting that they had no power to compel anyone in the executive branch to testify or to produce documents if forbidden to do so by the President. Kleindienst argued, "Your power to get what the President knows is in the President's hands." The only recourse, he asserted, was the next Presidential election, or the President's impeachment, a challenge the Judiciary Committee soon accepted. Moreover, when President Nixon further defied Congress by refusing to produce his self-incriminating Watergate tapes, the case went to the Supreme Court. While upholding the doctrine of executive privilege generally, the court refused to apply it to the Nixon tapes and in July 1974 decided unanimously against the President.

* * * * *

CONGRESSIONAL RESUMPTION OF POLICYMAKING AND FUNDING RESPONSIBILITIES

The test of Congressional recovery of powers which have been historically assumed by the President is, of course, the extent to which Congress actually resumes its original legislative initiative and policymaking mandate, including its power to appropriate funds, without which public policies cannot be carried out. In fact, Congress is already making a distinct recovery of its powers in these fields.

* * * * *

Congressional limitations now pose a constant threat to Presidential inititives in international affairs. Apart from the strategic restrictions imposed on the President by the War Powers Act of 1973, Congressional restraints are now applied also to detailed military decisions and actions by the President, even though the necessary funds already lie in the Presidental pipeline.

* * * * *

Presidential impoundment and its impact on domestic policy

When the President withholds from public expenditure money which Congress has duly appropriated for domestic policies and programs, that is, when he "impounds" funds, legislative executive relations become most sorely strained. Although impoundment as an instrument of executive power did not originate with President Nixon's Administration, it did reach its peak during his battles with Congress in the early 1970s. Governmental activities which he philosophically opposed and financially obstructed through impoundment, ranged over the entire repertoire of established national policies and enacted federal programs: water pollution control and highway construction, urban housing and farmers' home loans, rural electrification and rural environmental assistance, hospital construction and community mental health centers, health manpower training and vocational education, elementary, secondary and higher education and library services, food stamps and child nutrition, urban renewal and economic opportunity programs. In the latter instance, the Nixon Administration actually began to dismantle the entire U.S. Office of Economic Opportunity.

The Nixon Administration's campaign of impoundment waged against national policies and programs resulted in some fifty separate lawsuits. The administration lost most of them, and was compelled to restore the impounded funds and reactivate the interrupted programs. In the OEO case, for example, the Federal District Court of the District of Columbia explicitly denied the implied Presidential contention that "the Constitution confers the discretionary power upon the President to refuse to execute laws passed by Congress with which he disagrees." When considering Nixon's impeachment in June 1974, the House Judiciary Committee went further and questioned "whether the 'impoundment' power being exercised is really 'executive' power at all, or whether the actions of the executive branch are an invasion of the legislative province assigned by the Constitution exclusively to Congress.

* * * * *

* * * Congress still has to demonstrate that it can thus match the fiscal achievements already attained by our existing executive-controlled economic planning body, namely, the Council of Economic Advisers, which pursues its own established system of relations and reporting to Congress and to Congress' prestigious Joint Economic Committee. The broader institutional issue, indeed, is whether planning generally—especially long-range and comprehensive policy planning—will remain exclusively an executive responsibility as it has been traditionally, or to what extent it will become a proper legislative function, or possibly a joint Presidential Congressional responsibility.

CONGRESSIONAL POWERS OF OVERSIGHT, LEGISLATIVE VETO, AND SHARED ADMINISTRATION

In addition to the powers of legislation newly expanded since Watergate, Congress now exercises enlarged controls over established policies and continuing programs. These Congressional controls seriously affect the Presidency because they partake partly of the administrative process, ranging all the way from a general "oversight" of the executive branch to detailed types of "shared administration" carried on jointly with the executive. Shared administration comprises a congeries of Congressional activities that not only impinge on the President's powers, but are particularly controversial, constitutionally speaking, because they reputedly violate much that remains of the separation of powers doctrine. Congressional oversight, on the other hand, though partly classifiable as an investigatory or inspectorial function normally belonging to the executive, is conceded to be a legitimate responsibility in modern democratic societies.

Congressionally shared administration through exercise of the legislative veto

Procedurally these laws and regulations all fall into two general categories which in practice often merge with one another: (1) the strictly legislative veto, whereby an executive or administrative proposal or decision is set aside or ultimately confirmed; and (2) the process more akin to share administration under which the executive or administrative officer is required to clear with Congress in advance of his decisions or actions, a process known in federal terminology as "a coming into agreement" between the legislative and administrative authorities and personalities involved. Consequently, matters of sheer executive responsibility and of concrete administrative substance are increasingly subject to vetoes, disapprovals, approvals, "agreements" by: Congress as a whole; or by either of the Houses; or merely by a Congressional committee or subcommittee; or simply by a single committee chairman; or solely (though rarely) by an individual Congressman.

We should acknowledge that this sort of administrative sharing and Congressional "interference" with the President and the administrators under his command has worked fairly smoothly so far. There is no running feud—at least not yet—between the White House and Capitol Hill over the Congressional veto, and Congress seldom finds it necessary to reject or reverse any particular executive proposal or administrative decision. If any warranted opposition appears in Congress, or if any substantiable objection is posed by an aggrieved Congressman, the item is generally withdrawn by the administrators and no issue arises.

Nevertheless, there are sometimes involved differing principles of public policy, or divergent concepts of proper administration, or opposed views of political parties, from which no retreat is possible. When the issue does become one of high policy or administrative conflict or partisan politics, as has been the case in some governmental reorganizations, the legislative veto and shared administration may become lethal instruments of the American decisionmaking process. A battle then often takes between President and Congress, involving the use of raw political power, a contest in which little quarter is asked and less given, but one which is ultimately resolved within the rugged realities of American politics.

How for will Congress continue to tread on executive turf and trespass on administrative terrain as a consequence of the Watergate-Nixon provocation? The legislative veto is widely regarded as evidence of Congressional aggrandizement of a type of power the Constitution assigned only to the President; and in strict constitutional constructionist circles, shared administration is considered to be in violation of the remnants of our separation of powers doctrine.

CONGRESSIONAL REORGANIZATION AND RELATED REFORMS

Effective Presidential-Congressional government thus requires both a reformed Congress and a reconstituted Presidency. And in its broadest sense, Congressional reform also entails modifications of our political party system and certain related "parliamentary" reforms. Although the latter constitutes one of the most problematic of these developments, present trends in both our party and our "parlimentary" affairs raise prospects for selective changes in our political constitution under the impetus of the continuing reaction to the Watergate-Nixon years.

* * * * *

CONGRESSIONAL REFORM AND PRESIDENTIAL-CONGRESSIONAL GOVERNMENT

The most emphatic expression of political independence is found in Congress itself. While acknowledging the need for a minimal measure of party discipline and granting the essential leadership role to the President, who enjoys a national mandate clearly exceeding the particularized Congressional constituencies, the resurgent Congress is now in a vigorous, historic contest over American constitutional powers as well as over current public policies. In any transition toward Presidential-Congressional government the long accepted adage that "the President proposes, Congress disposes" may take on new meaning. Although the American public rates the President primarily for his "legislative" accomplishments, and not merely his "executive" achievement, and although it still expects Congress to cooperate with the President and to expedite his legislative program, Congressmen are individually and collectively assuming independent initiatives and exercising increasing powers.

This is now a matter of Constitutional strategy, not, as it has often been in the past, a purely political tactic by a minority party. When the Republican Nixon-Ford Administration was displaced by the Democratic Carter-Mondale Administration, the Congressional leaders announced that their new attitude would be independent of the political coloration of the Presidency. Congress, they warned, was no longer going to "roll over and play dead." In a more serious vein, the Senate Majority Leader Mike Mansfield declared: "I believe the Congress will retain momentum. There will be a slow and deliberate effort by Congress to reassert its own power. Of course, we have to be sure the pendulum doesn't swing too far in the other direction. But the President will not continue to accumulate power at the expense of Congress."

* * * * *

A shopping list of "parliamentary" proposals

Other informal processes and more formal structures may emerge to help institutionalize a Presidential-Congressional system, but only experience will demonstrate their adaptability to the American form of government. During this most recent constitutional crisis, relatively few suggestions have been made for doing away entirely with our Presidential type of executive, or for totally transforming our other branches of government. However, the usual shopping list of Parliamentary proposals has been revived by a number of critics of American government, including several observant political scientists.

* * * * *

Some milder moves toward Presidential-Congressional Government

More indigenous to American government, and easier to accomplish, would be certain milder changes in a Parliamentary direction, of the kind suggested by our co-author Maurice Vile. Like him, some American political scientists have recommended seating the Cabinet (and some the President) in Congress, where they could be questioned but would have no power to vote. Such "Parliamentary" proposals not far removed from the present practice of Congressional committee hearings, where Cabinet members and policy-level civil servants are subjected to a "question-hour" as gruelling as any experienced in the British House of Commons.

Undoubtedly we could profit from increased dialog between the executive and Congress. The Carter Administration considered the advisability of formalizing such arrangements, including regular use of the President's room near the Senate chamber. But few who are conversant with comparative governmental institutions would wholly replace the Presidential or Presidential-Congressional system with Parliamentary government in the U.S.A. As Professor Vile has shown, the British system itself is being reappraised, recognizing the fact that Parliamentary government on its part has already undergone certain changes toward the Presidentially inclined Prime Ministership system.

In the same spirit is co-author Ben Cohen's recommended establishment, alongside the Presidency, of a super-cabinet Executive Council appointed by the President but confirmed by the Senate. Most pertinent is Cohen's sage suggestion for "quiet, prior consultation" between President and Congress in the course of policymaking and decisionmaking. Certainly, we should have more than the usual political pressures exerted by the President on Capitol Hill, including crisis conversations and emergency phone calls by White House assistants to leading Congressmen, in order to smooth out policy differences and legislative details. In fact, unless such executive-legislative contacts are conducted more systematically and sensitively, they can even become counterproductive as Congress learns better how to structure and stiffen its growing independence.

* * * * *

Internal congressional reforms accomplished

In its resurgence after Nixon-Watergate, Congress has pursued three major long-delayed internal reforms: committee reorganization, Congressional procedure, and Congressional staffing.

* * * With its elaborate committees and their extensive personnel, and with its own ample staff support for individual members. Congress has now become a billion dollar per year bureaucracy in its own right.

This is an affluent apparatus even for a great Democracy, and it will no doubt help Congress earn its reputation as "the greatest deliberative body in the world." Nevertheless, the expectant American public looking for a better legislative product will be scrutinizing Congress as never before. Can a burgeoning Congress, working side-by-side with a recuperating executive, live up to these expectations?

CONSTITUTIONALISM AND CONDUCT

We are now witnessing a historic test of talent and of will between our two primary branches of government. The outcome will depend in the first instance on our success in fashioning a shared and workable relationship between the two. Co-author Malcolm Moos correctly epitomizes the current constitutional challenge by asserting that the key question is "how to reconnect the President with the American political and administrative system and with the Congress in particular." Paradoxically, because of its pre-

viously subordinated position. Congress may, at the outset, decide to seize the advantage vis-a-vis a dynamic President in order to "keep him in his place," without, however, antagonizing an electorate still wedded to pure Presidential forms of government. A major unknown is whether, when issues of constitutional principle do arise, members of Congress will transcend their political party loyalties in favor of their institutional allegiances to the "club" of Congress itself. Yet, in the integrating play of American politics, there is always an inducement for minority party Congressmen to vote with (and to sustain the vetoes of) a President, especially when he is in contention with his own majority party.

* * * * *

* * * Appropriately, the present process of institutional revision and constitutional amendment is an experimental and flexible one. But it is unduly sporadic and, worse still, it is crisis-oriented. We need a more regular, continuing, systematic oversight of evolving constitutional arrangements. For this purpose, the appointment of a joint Presidential-Congressional commission on legislative-executive relations might be advisable, to evaluate, to facilitate, and possibly to monitor the process. My fellow authors share my views of the possible value of such a joint undertaking.

TERRORISM AND OPPRESSION CONTINUE IN ARGENTINA

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. DRINAN. Mr. Speaker, another delegation of international authorities has visited Argentina and has been told by the Argentine Government that it soon will be releasing a list of 3,474 political prisoners currently being detained by the authorities in Argentina.

This evidence confirms the conclusions of the three-person mission sent to Argentina by Amnesty International. This team, of which I was a member, filed a comprehensive report in March 1977, of the shocking conditions in Argentina where hundreds of people continue to disappear and the basic human freedoms are denied.

I attach herewith the statement of French Admiral Antoine Sanguinetti and American lawyer Herbert Semmel.

I attach also the statement issued by the Council on Hemispheric Affairs.

These sad documents confirm the wisdom of the Congress in terminating aid for Argentina.

Mr. Herbert Semmel, executive director of the Center for Law and Social Policy based in Washington, has raised an excellent point by calling for an immediate announcement by the U.S. State Department of its willingness to accept at least 500 prisoners and their families from Argentina. The Attorney General has the power under existing law to admit at least this number of persons from Argentina. Mr. Semmel and others associated with the most recent international visitation of Argentina stress the fact that the United States has been generous in accepting refugees from Cuba, Vietnam, and elsewhere and in this spirit should extend visas to those persons in Argentina who are most oppressed.

The statements follow:

STATEMENT OF ADMIRAL ANTOINE SANGUINETTI AND HERBERT SEMMEL

Argentina will shortly announce the names of 3,472 persons it acknowledges holding as political prisoners or alleged terrorists. The Argentine Minister of Interior admitted to an international delegation that few of these prisoners will be tried because legal proof of any guilt is lacking.

The statements of Argentine officials were made to members of the Delegation of the International Federation of the Rights of Man in Argentina to investigate the circumstances of political prisoners and disappeared persons. The delegation of four included Admiral Antoine Sanguinetti, a retired Admiral of the French Navy; Herbert Semmel, Director of the Center for Law and Social Policy; Judge John Carro from the Supreme Court of New York; and Franceline Lepany, a French attorney. The delegates were in Buenos Aires from January 18 to 25 and met with three Argentine cabinet officials, Foreign Minister Admiral Montes; Chief of the Navy Admiral Massera; a member of the ruling Junta; and the Minister of Interior General Harguindeguy. The delegation also met with three human rights organizations in Argentina: the League for Human Rights, the Permanent Assembly for Human Rights and the Ecumenical Movement for Human Rights with bishops, lawyers, professors and representatives of major political parties and trade unions; and with relatives of prisoners and disappeared persons.

Argentina at present is ruled by a military junta which seized power in 1976 and operates under a state of siege which has the effect of suspending all other provisions of the Constitution. The delegation received the first official figure issued by the Argentine Government of prisoners held for political reasons or as alleged terrorists, a total of 3,472. The Minister of Interior stated that many are held under executive detention, in which no charges are filed and the prisoners receive no trials. The Minister claimed that all these prisoners were connected with terrorists, but admitted that proof was lacking in many cases, in which event no trials are held.

In addition to the officially acknowledged prisoners, thousands of persons have disappeared in Argentina since the state of siege was imposed, a fact recognized by government officials, who, however deny any official responsibility. Members of the delegation were told by officials of human rights organizations that unofficial detention camps exist in a number of places around the country most notably the Army camp known as Campo de Mayo and the Navy Mechanic School, but government officials denied such reports.

Members of the delegation also spoke with many eyewitnesses to the seizure of persons. They reported that the seizures were generally made by persons dressed in civilian clothes who identified themselves as members of the security forces. The most well-known recent case was the seizure of two French nuns in December 1977 and nine other women. These seizures occurred within two blocks of a police station, lasted twenty minutes, and involved six cars with heavily armed men. No police interfered. Many seizures occur in broad daylight, at homes and in workplaces, so that it would appear that the cooperation of the security forces is necessary. The delegation met with persons who stated they had been seized, held, in some cases tortured and later released. Other persons stated that at least twenty pregnant women had disappeared and one grandmother told of being called by an orphanage to pick up her grandchild whose pregnant mother had been seized several months earlier and had not been heard from since.

Foreign Minister Montes stated that some of the prisoners would be allowed to leave the country but that the United States would not accept them because they were "terrorists." Mr. Semmel discussed this claim with U.S. Embassy officials in Buenos Aires and on his return with State Department officers in Washington. He learned that there is no active parole refugee program for Argentina but that the State Department has requested additional authorization for parole visas for Latin America from the Justice Department. Mr. Semmel discovered that there is a misunderstanding by U.S. Embassy officials in Buenos Aires of the legal requirements for parole immigrants involving the question of whether Congressional action is needed for any parole program for Argentina. State Department officials in Washington confirmed that only Justice Department action is required, although consultation with chairmen of the Congressional committees with jurisdiction is a usual practice. Mr. Semmel called for an immediate announcement by the United States of its willingness to accept at least 500 prisoners and their families. He also conferred with a member of Senator Kennedy's staff who expressed the Senator's continuing concern about the situation in Argentina.

CURRENT SITUATION IN ARGENTINA—A REPORT OF THE U.S. FRENCH STUDY MISSION

The Argentine interior minister told members of a delegation of prominent French and U.S. citizens, who have just returned from a fact-finding mission to Argentina, that his government would soon begin to release the names on a list of 3,474 political prisoners currently being detained by the authorities.

Argentine and international human rights organizations maintain, however, that many more thousands of additional persons are being unofficially held by government security forces. Up to this date the government has adamantly refused to disclose the names of any political prisoners in their hands. The minister's announcement is nevertheless seen as being significant because only a few weeks ago the Argentine ambassador in Washington, in a published response to three religious leaders, who are also members of COHA's board of trustees, flatly denied the existence of "any political prisoners in Argentina."

The fact-finding mission, sponsored by the International Human Rights Federation and the Association of Catholic Jurists, with the assistance of COHA, included Admiral Antoine Sanguinetti (Ret.) and civil rights lawyer Franceline Lemany from France, and Washington attorney Herbert Semmel, who is the director of the Center for Law and Social Policy, as well as New York State Supreme Court Justice John Carro, from the U.S.

The joint delegation met with Admiral Emilio Massera, the commander of the Argentine navy and a member of the three-man military junta which rules the nation; Foreign Minister Oscar Montes; and Minister of the Interior General Albano Harguindeguy, who heads the nation's police and prison system. The delegation also met with representatives of the three principal human rights organizations in Argentina as well as representatives of all of the nation's traditional political parties and community leaders.

The interior minister admitted to the delegation that the majority of those on the list to be made public are being held under State of Siege regulations, with no formal charges being lodged against them. He described many of them as being subversives or those the government "feels" are subversive,

but lacks the necessary proof to substantiate the claim.

In response to a query by the delegation as to why only 50 Argentines have been permitted to exercize their constitutional right to go into exile to the country of their choice, the interior minister responded by saying that the reason for this small figure was that neither France nor the U.S. would accept political refugees. He did not offer an explanation why the Argentine government was not responsive on this question to the offer of many nations to accept Argentine political prisoners.

Attorney Herbert Semmel discussed the minister's assertion with U.S. embassy officials in Buenos Aires and came to the conclusion that these officials were insufficiently aware of the possibility that the U.S. would accept asylum cases in this country. The American members of the delegation raised the question whether the time had not come for the U.S. to institute a parole program, patterned after what was done in Cuba and Viet Nam, in order to receive victims of Argentine repression.

Another observation of the delegation was that several U.S. embassy officials seemed more concerned with articulating the Argentine government's defense of its human rights excesses as being based on the need to extirpate terrorism in the country rather than vigorously representing the Carter Administration's policy of favoring human rights observance in the southern zone of Latin America.

A spokesman for COHA announced that the organization would broach the parole question with the commissioner of the Immigration and Naturalization Service and Congressional leaders and members of the Justice Department to advance the possibility of an emergency program to provide relief to Argentine refugees.

The French members of the delegation were disappointed over the inability of Argentine government officials to give satisfactory answers to the status of 16 missing French nationals in the country, including two recently abducted French nuns.

FARMERS AND THE OFFICE OF CONSUMER REPRESENTATION

HON. RICHARD NOLAN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. NOLAN. Mr. Speaker, farmers and consumers will both benefit from an Office of Consumer Representation. Farmers are also consumers and the following "Dear Colleague" letter explains the stake which farmers have in the establishment of the Office.

The letter follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C.

DEAR COLLEAGUE: We urge your support for new legislation which will be offered on the House floor as a substitute for H.R. 6805, the Agency for Consumer Protection bill. The substitute, which creates an Office of Consumer Representation, is an attempt by supporters and critics of the Agency to resolve their major differences and to reach a mutual agreement which might more readily receive widespread support.

As representatives from farming districts, we support the substitute legislation to establish an Office of Consumer Representation. This Office will be an inflation and bureaucracy fighter, benefitting rural as well as urban consumers.

Individual farmers, like other consumers, have at times been adversely affected by inflationary government decisions or victimized by price-fixing and other unfair trade practices. The Office of Consumer Representation could help farmers by representing their interests as consumers before other federal agencies. The Office would also be empowered to petition the Justice Department and the Federal Trade Commission to initiate formal investigations of fraudulent trade practices which affect farmers and rural consumers.

An active Office of Consumer Representation could assist farmers with a variety of problems, including:

When farmers are bilked by grain elevator operators who illegally downgrade the grain which farmers deliver to them, and then sell it at the actual higher grade to processors and other consumers.

When federal energy policy establishes unjust pricing regulations, such as the arbitrary 1973 Cost of Living Council decision which resulted in a 300 percent rise in propane prices.

When the ballooning prices for machinery replacement parts are the result of illegal collusion by manufacturers.

Clearly, farmers and rural consumers also have a significant stake in securing the establishment of an Office of Consumer Representation. We strongly urge you to support the substitute when H.R. 6805 comes before the House.

Sincerely,

JOHN B. BRECKINRIDGE,
RICHARD NOLAN,
Members of Congress.

RURAL ELECTRIFICATION ACT AMENDMENTS OF 1978

HON. ED JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. JONES of Tennessee. Mr. Speaker, I am introducing the Rural Electrification Act Amendments of 1978, in order to assure that citizens of our rural areas are able to receive the benefits of new technologies emerging in the telecommunications industry. These technologies enable telephone and broadband telecommunications services to be economically provided to even the most rural areas through joint utilization of a single facility. This bill amends the Rural Electrification Act to permit REA financing of broadband facility construction including facilities for provision of cable television.

The rural telephone systems financed through the REA telephone loan programs have done an outstanding job in bringing telephone service to rural America.

In 1949, it was estimated that only 38 percent of rural homes and establishments had telephone service of any kind. Today that figure approaches 90 percent as 858 REA-financed rural telephone systems provide service to 3,560,532 subscribers. Again in 1949, the service standard established for the new REA telephone program was eight-party service. At present, 62 percent of the service provided by rural telephone system financed through REA is one-party service.

The mission of the rural telephone program. however, is still not completed. Rural telephone systems are providing initial service to an increasing number of new subscribers annually, over 500,000 in the past 4 years alone. The challenge also remains of upgrading existing service to single party and meeting customer demands for new services such as push-button dialing, call forwarding, conferencing, 911 and other convenience features which, today, are not generally available to rural area residents.

Demands from subscribers for these services, and simply the rate of technological development within the telephone industry mandates a continuing accelerating pace of change. The service provided by the most fully upgraded rural telephone systems will soon become technically obsolete. Developments in the areas of digital technology, electronic switching capacity, coaxial cables and, in the fairly short term, utilization of fiber optics will render our present rural telephone systems, which dot rural America with literally thousands of little cinder block or brick remote central office buildings, connected to subscriber premises by hundreds of thousands of miles of twisted copper wire, nearly as obsolete as the magneto crank phone.

The dominant trend in the telecommunications industry is the convergence of communications and computer technology. Many of the basic features of the modern computer were, in fact, developed in the Bell Laboratories, and the electronic telephone central office is actually nothing but a large computer. A number of other forms of computer-controlled types of equipment for maintaining and administering transmission facilities and switching machines are already in common use. The national telephone network is undergoing a conversion to digital technology, a process which promises a substantial cost savings in the delivery of ordinary telephone services and will also permit economic offering of premium and convenience services. In addition to plain old telephone service (POTS), utilization of these new technologies in the area of broadband communications will also permit delivery of any number of additional "nontelephone" services because of the enormous increase in bandwidth or capacity which is available. When this conversion to broadband technology is complete, it is difficult to identify a communications service which could not be provided over the local exchange network.

Today, the Rural Electrification Act precludes utilization of REA funding for provision of cable television other than those "intended exclusively for educational purpose".

This prohibition undoubtedly was intended to prevent any "unfair competition" to cable television companies from telephone systems, but the result has simply been to deny the availability of cable TV services to rural America.

This legislation would permit rural telephone systems to get financing to construct economically efficient facilities for provision of cable television service in rural areas where it is not generally presently available.

Certainly there is a growing awareness that the benefits of modern telecommunications services are not being made

fully available to rural areas. Provision of cable television services is the most common example of the capabilities of broadband communications. For several reasons, however, this superior type of television reception is simply not available in the rural areas and communities which are served by REA-financed member telephone systems. Over 1 million households in rural America receive no television service of any type—an additional 22 million receive only inadequate quality service according to a study conducted by the Denver Research Institute.

The National Cable Television Association stated in a recent Federal Communications Commission filing that:

> Under current economic and regulatory conditions, the goal of making broadband communications services available to all Americans can not be achieved by the private sector alone.

Under present circumstances, private CATV operators normally require a subscriber density of 30 to 40 per mile to achieve economic feasibility. Nationwide, the rural telephone systems financed by REA have an average subscriber density of less than 4 per mile of line. This gives an indication of the rural character of the areas which I am discussing. Although cost figures for combined provision of telephone and broadband services are not yet definitely established, I believe that by utilizing technology, rural telephone systems could provide telephone and cable television service as well as any number of additional broadband services at an affordable subscriber rate. Recent developments announced by the 33M Co. indicate in some instances a joint-use coaxial broadband system could be constructed for less than the present cost of a "conventional system."

Coaxial cable is now being used by rural telephone systems in several systems for purely telephone applications.

I believe that the substantial economies which would result from the technological developments in the industry will require greater utilization of these facilities without regard to the question of the provision of services beyond telephone. In my view, however, cable TV and broadband communications services are a definite part of the total telecommunications service which it is the objective of our rural telephone systems to provide.

In fact, the general inadequacy of television service represents one of the single greatest differences in the "quality of life" now existing between rural and urban America. The historic commitment by Congress to rural development over the past quarter century has insured that technological developments in central station electric service and modern, efficient telephone service did not bypass rural America. I believe this commitment must be continued if the benefits of broadband communications are to be made available in rural America.

In November of 1976, at the request of Senator HERMAN TALMADGE of Georgia, the Office of Technology Assessment held a 3-day conference and seminar in Washington to debate "The Feasibility and Value of Broadband Communications in Rural Areas." A proposal recommending amendment and revision of the Rural Electrification Act to permit Government-assisted financing was adopted by the conference in its tentative report and findings.

Very recently, an interagency task force coordinated by the Office of Telecommunications Policy, has published a massive study on future telecommunications needs of rural America. In this study the concept of provision of facilities for broadband telecommunications by REA-financed telephone systems is strongly endorsed.

By the use of the term "broadband telecommunication services," I mean far more than simple provision of cable television. I am not disposed to argue before the Congress that the interests of rural citizens are so neglected by their inability to receive "Starsky and Hutch" or the "Brady Bunch Hour" that immediate creation of a new Federal program and utilization of public revenues is necessary to rectify the situation. When delivered in combination with telephone service, however, cable TV is the economically feasible item which will make it possible for local telephone systems to offer to their subscribers a myriad of other services which are technically feasible but not economically viable in rural areas as separate considerations. That list includes remote meter reading, energy conservation, continuing education, telemedicine. law enforcement applications and many more.

The central question is how will the basic facilities over which these services are made available be provided. The REA-financed rural telephone systems have basic facilities in place. Their personnel are trained and competent. Most are managed by local area representatives—people completely aware of area conditions and subscriber needs. The economies of using these preexisting advantages are so self-evident that public policy should definitely not require the establishment of a new group of carriers to bring discrete portions of these multiple telecommunications services to the consumers.

In 1977 testimony before the Appropriations Subcommittees on Agriculture and Related Agencies of both the Senate and the House, the Administrator of REA, David A. Hamil, indicated an awareness of the desirability of providing broadband services to rural America.

> The technology exists which would permit the utilization of coaxial cable to provide, in this one facility, telephone and broadband subscriber service, including cable television, with only a small incremental cost over providing just telephone service.

The rural telephone systems are willing, even eager to undertake this challenge. The Agency, REA, appears to strongly support my contention that joint provision of broadband facilities is the most economically efficient means of bringing these services to rural areas. This legislation makes only a minor modification to the Rural Electrification Act. The distinctions the act presently contains have become outmoded through time and technical change. I hope this legislation can receive early consideration and passage by the House.

CONTINUING CRISIS IN FOSTER CARE

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. MILLER of California. Mr. Speaker, within the past year, the Congress has given more serious consideration to the problems of the foster care system, and the families and children who find themselves in it, than at any point in recent history. Extensive hearings and investigations, both within Congress and throughout the country, have established the wastefulness of the present Federal program, both in fiscal and in human terms.

H.R. 7200 would focus more attention on the rights of the family to needed preventive and reunification services, establish greatly needed accountability procedures, and provide adoption assistance to families wishing to adopt eligible children who, otherwise, would remain indefinitely in foster care at far greater cost to the Government, and to themselves.

When I first began my work on foster care and adoption, there seemed little hope that reforms in this system could be achieved. But the near unanimity of opinion in support of the thrust of H.R. 7200, and especially the superb leadership provided by my colleague, the chairman of the Subcommittee on Public Assistance (Mr. CORMAN of California), has brought us to the brink of fulfilling that reform in 1978.

Let us note what has occurred in the 10 months since my own "foster care and adoption reform bill" was introduced for the first time:

The Public Assistance Subcommittee, under Congressman CORMAN'S leadership, incorporated most of the provisions of my bill into H.R. 7200, and won the support of the full Ways and Means Committee;

The full House passed H.R. 7200 last June by the overwhelming margin of 335 to 64;

Vice President MONDALE announced, in July, the Carter administration's endorsement of a foster care and adoption reform package very similar to that passed by the House;

California Senator ALAN CRANSTON introduced the administration bill in the Senate, S. 1928;

Testimony from a wide range of social welfare, administrative, children and family, and legal rights groups before the Senate Finance Committee endorsed H.R. 7200's principles and urged swift enactment;

The Finance Committee modified H.R. 7200, but retained the essential thrust of the legislation, and passed it on to the full Senate, where it now awaits final action. It appears that the Senate will take up H.R. 7200 in March.

This is a great record of accomplishment in a very short time. I believe that, under the continued leadership of Con-

gressman CORMAN and Senator CRANSTON, we will see H.R. 7200 enacted. It is imperative, however, that we not reduce the pressure for its passage. As the accompanying excerpt from a recent Los Angeles Times story on foster care shows, the condition of the children in foster care demands expeditious action. Nothing has moved this legislation swiftly more than the concerted efforts of organizations and citizens working in the foster care and adoption field who have stressed the need for this legislation to their local congressmen and senators. Those efforts must be redoubled now, so that we move the final steps necessary to have H.R. 7200 signed into law this year.

The article follows:

[From the Los Angeles Times, Dec. 4, 1977]

FOSTER HOMES: A HUGE SYSTEM WITH MAJOR PROBLEMS

QUALITY TOO VARIABLE, PLACEMENTS TOO MANY, CASE LOADS TOO HEAVY

(On any day, more than 10,000 children in Los Angeles County are living away from their homes and parents. From infants to teen-agers, they are largely victims of circumstances—absent parents, sick parents, abusive parents. Some have behavior problems which had led to their removal from home. These are the county's foster children. This article examines whether the $100 million-plus foster care programs are doing all they should. An acompanying story describes some of the vivid scenes in the complex mosaic of foster care.)

(By Celeste Durant)

Fifty-seven tattoos were sanded from her body when she was 17—a record in pencil lead and skin of boredom, frustration and weakening sanity, a legacy in self-mutilation during 14 years in foster care.

She remembers drawing most of them to while away the hours she spent in solitary confinement in the 37 juvenile institutions she was placed in during her late childhood and adolescence.

Before, during and after the institutions there was a series of 30 foster homes where she also spent time, shuffled from family friends and relatives to homes licensed by the county.

And during her odyssey from one home to another, one institution to another, she watched herself progress from a lonely child looking for love to a person anesthetized to new people and new hopes.

She became hardened, difficult to handle, a chronic runaway who ended up spending four years of her life—two weeks here, three months there—in solitary with only two or three years of formal education and a nervous breakdown to show for it.

And when she left the system at age 18, she went out into the world, had three children and became a child abuser—a woman capable of dragging a child across the room by its hair, hurling a child through the air in a fit of rage or attempting to strangle one.

Her children also ended up in foster care; one of them, a son, she put up for adoption.

She is now 37, has two of her children back with her and is a foster mother.

"I can't say much for a system that underwrites that kind of life for kids."

Her name is Jolly K. and she is the founder of Parents Anonymous, a self-help group for child abusers.

When she looks back on her life and the years of physical and emotional isolation she suffered she says, "it's a —poor way for society to handle children.

"The institutions and half of those foster homes were with the full knowledge of the state and the county. They were directly involved.

"I can't say much for a system that would underwrite that kind of life for kids."

There are more than 10,000 foster children in Los Angeles County ranging in age from infancy to 18: they come in all sizes, colors and sexual preferences and are spread out from one end of the county to the other.

There is the baby in Long Beach whose mother brought her home from the hospital and left her in a crib in her own filth until she developed maggots that ate their way through one of her eardrums.

The 14-year-old boy from Carson, abused by his natural parents, rejected by his adoptive ones, who was picked up in the back seat of a car sexually servicing a 56-year-old man.

The 5-year-old girl from Highland Park who watched the adult cousin she was living with smother another small child because it started crying during the Donny and Marie television show.

The county's foster child population changes from day to day, week to week; some stay only a few days while others spend their entire childhoods.

They have been removed from their homes either to protect them from their parents or because they have committed crimes.

Where they live, how long they stay and what happens to these children is the responsibility of a sprawling, chaotic, fragmented system that the Los Angeles County government calls "out-of-home placement."

As county governmental systems go, "out-of-home placement" is awesome—it meanders over three separate county departments, employs about 2,800 county workers, utilizes the services of over 4,000 private households and more than 500 group homes and large institutions.

Its total budget hovers in the neighborhood of $118,117,694 a year with $40,204,880 of it coming from federal and state funds.

The system suffers from all the expected frailities of large bureaucracies—mountains of paper work, limited funds, inadequate resources and a general lack of communication among its various parts.

It also labors under the additional burdens that arise when a bureaucracy gets involved in the business of dealing wih people's lives.

Although there have been many changes in the system since Jolly K. was a child, she feels many of the problems are still there.

"I would like to tell you that I am an exception," she said. "On a scale of 1 to 10, I am towards a 10 but there are a lot of kids on the 5, 6 and 7 level. They haven't had as many placements as I had, but what's the arbitrary number before you break their hearts, minds and souls?

"I wish I could say I was unique—it would give me comfort to say this doesn't happen to many people, but it does."

Said Supervisor James A. Hayes, "The thing that really gets me is the fact that I found in juvenile camps and hall youngsters who had been bounced from eight to 10 foster homes."

Not surprisingly then, the foster care system here is frequently criticized. A federal General Accounting Office study released earlier this year accused the county of "losing" children—warehousing and forgetting them.

And Supervisor Hayes last spring urged that the county upgrade the quality of both foster homes and parents, while hiring more social workers to reduce case loads.

Both participants and observers agree—the system does not work as well as it should. They say its major problems are that:

Too many children are removed from their homes and kept for too long a time.

"There are more placement recommendations than there should be probably," said a commissioner in the Dependency Court, "because social workers are overburdened and don't have the resources to work with the situation in the home so the safest thing is to remove the child."

Social worker and probation officer case loads are too heavy to allow the kind of service the system says it wants to provide.

"I have 52 children on my case load," said a children's services worker in the San Fernando Valley. "About 15 are abused and neglected children, and it's very difficult to do what we should for them.

"You have to build a relationship so the child will confide in me and build a relationship with the parents, also. You want to return the child to a home you feel confident in—you like to know the family and the extended (other relatives) family. There just isn't enough time.

The quality of both individual foster homes and group facilities is uneven.

"The quality of placements vary from very good to average to not so good and Probation and (the Department of Public Social Service) from time to time close down sub-par ones but when you get to the lower end of the spectrum you are between a rock and a hard spot—you need bed spaces and you can't afford to be choosy," said Judge Peter Smith, presiding judge of the Juvenile Court.

"It's a question of whether you have people in homes that are not really bad but not all that good or have them sit in Juvenile Hall and have them get nothing."

There are very few bed spaces available in the county to handle what the system calls its "hard-to-place" population of severely emotionally disturbed youngsters.

Said Esther Strathy, central placement coordinator for the county Probation Department, "Too much time is spent seeking placements. We must divest ourselves of this frantic search for placements for these special kids, then we will be able to service all kids better."

Foster parents are not trained to deal with the kind of children that are now entering the system.

"Foster care is not what it was 10 years ago—no sweet little children who were abandoned because they were illegitimate," said Stephanie Klopfleisch, director of the Bureau of Social Services for the county Department of Public Social Services (DPSS). "We are getting older, physically ill, psychologically disturbed kids."

Said Mrs. Rhonda Kloempken, president of the California Foster Parents Assn., "We are getting children that we have no capability of handling."

According to a 1975 study by the state Department of Health, 14 percent of the foster children from L.A. County used in their survey entered the system because they had been abused by their parents, 30 percent because of parental absence from the home and 18 percent because of the child's behavior. The other 38 percent were divided among various causes.

Racially, Los Angeles county's foster child population in the survey was 41 percent white, 27 percent black and 21 percent Spanish surnamed with the remainder in the "other" category. Sexually it was 49 percent male and 51 percent female.

The Department of Adoptions has about 1,000 children, most of them referred by DPSS, in foster homes awaiting adoption.

IS CARTER "MAZE DULL?"

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. ASHBROOK. Mr. Speaker, President Carter's first year in office has left many Americans wondering whether

Carter is capable of handling the job. These doubts are now being openly expressed in management circles.

A management expert who is a personal adviser to some of the Nation's top executives has labeled Carter as "maze dull." According to Eugene Jennings, a psychologist and management professor at Michigan State University, this term is used to describe someone who is unintelligent about avoiding or maneuvering out of tight situations. People with this personality trait trip themselves up and create crises.

In Jennings view, this defect will work against the effectiveness of the Carter Presidency. "President Carter," he says, "is destined to be disappointed by his moment in history." He predicts it will be an administration marked by gaffes and blunders.

Following is an interesting article on this subject which appeared in the January 10, Mount Vernon, Ohio, News:

PRESIDENT CARTER IS "MAZE DULL," MSU MANAGEMENT EXPERT CLAIMS

(By John Cunniff)

NEW YORK.—A confidential adviser to top executives describes President Carter as "maze-dull," and terms it a defect that will hobble his administration.

Maze-dull, said Eugene Jennings, a psychologist and management professor at Michigan State University, is a person who is unintelligent about avoiding or maneuvering out of tight situations.

Such people, said Jennings, who has observed the personality condition in many corporation presidents, repeatedly trip themselves up and create crises because of traits such as arrogance and ignorance.

Jennings, who is a personal adviser to some of the nation's top executives and some Washington officials too, said the current administration is destined to be marked by gaffes and blunders.

Unless he manages to surround himself with wise aides, and defers to them, said Jennings, "President Carter is destined to be disappointed by his moment in history."

The characteristic, said Jennings, is "too much built into the nature of the man to be overcome by additional experience." He listed six qualities as among those that mark the maze-dull personality:

1. A vast ego; an idealized notion of self. This is the essential character trait that hides from the individual the imminence of trouble.

Such a person is guilty of the sin of presumption. "He presumes there is more power to the office than there is; and he presumes also that his personal power is greater than it is."

These characteristics lead to unrealistic promises. Applied to Carter, "you have to believe in the tooth fairy to think he will be able to balance the budget."

They also feed arrogance. "An arrogant person doesn't have respect for information and experience. He believes intelligent people can do anything."

2. Inward-oriented intelligence. Maze-dull people seek answers within. They immerse themselves in every detail. They read, read, read. They do not trust others. They cannot delegate.

Such behavior keeps them involved in trivia and prevents them from making the big decisions that can change the course of events. It prevents them from building a team, from tapping available wisdom.

3. A tendency toward ideas and programs almost to the exclusion of politics and people. "They believe a bright idea, when enunciated, should be convincing in itself."

Such people feel they should not have to engage in politics to sell their ideas. "They fail to understand that politics is the essential art of government, not bright ideas."

4. Intention versus consequences. They belive that good consequences follow from good intentions. "They fail to anticipate the consequences of their own behavior."

Faced with consequences other than those they see or feel justified, they either cave in or become a bull in a china closet. Such people should learn the creative art of silence, but they feel silence is impotence.

5. Conflict between right and proper. Jimmy Carter has a stronger sense of right and wrong than of propriety and impropriety.

"It was right that a good friend stand by Bert Lance; it was improper that the president of the United States do that. It was right that Carter establish his own White House style; it was improper the way he did it, because in ostentatious style he tried to appear the opposite."

6. Emotions rule reason.

In summary, said Jennings, "Carter is lacking for the Washington jungle what a kid from the typical middleclass suburb would lack if thrown into the jungle of New York. He lacks the smarts."

In the past, said Jennings, who has written many books on the executive behavior, maze-dull individuals have sought to overcome their defect by arming themselves with aides and subordinates who can see the pitfalls.

REPORT ON MIDDLE EAST TRIP

HON. DONALD J. PEASE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. PEASE. Mr. Speaker, I recently returned from a 3-week trip through the Middle East as a member of the House International Relations Committee. During that time, I met with the leaders and other government officials in seven nations. I feel that my understanding of the personalities and the needs of these Middle Eastern countries has been tremendously enriched. In the past 2 weeks I reviewed and reflected on my experiences in three reports to my constituents. I would like to share these articles with my colleagues and include them at this point in the RECORD:

WASHINGTON REPORT NO. 1

(By DON J. PEASE)

After traveling 17,800 miles to and through seven Middle East nations in a period of 19 days, I have to fight off the temptation to consider myself an expert on the current Arab-Israeli peace efforts.

Assuredly, I am not an expert, even though I and a dozen fellow members of the House International Relations Committee were in the Middle East at a particularly fascinating and crucial time. After talking with top officials in Tunisia, Syria, Egypt, Jordan, Saudi Arabia and Iran, we flew into Israel on January 15 the day before the political committee of the Jerusalem peace talks was supposed to convene.

Taking off from Tehran, Iran for Tel Aviv, Israel, we learned that the peace talks were off the track and that U.S. Secretary of State Cyrus Vance had postponed his departure for Jerusalem. Within 12 hours that mini-crisis was solved. I was in Jerusalem for the start of the political committee meetings, and I attended the state dinner at which Israeli Prime Minister Menachem Begin affronted the Egyptian delegation, contributing to suspension of the negotiations the day after our congressional delegation departed Israel.

There's only one thing I think I know for sure at this point—that both the Arabs and the Israelis genuinely want peace.

Mainly, both sides want peace because they are sick of war. Too many young men of Israel, Syria, Jordan and Egypt have been killed or maimed in the four Arab-Israeli conflicts of the past 30 years. The pain of war is too directly real for too many families.

Another motivation for nations like Jordan and Egypt is their overwhelming need for economic development. With millions of their citizens living in abject poverty, the last thing they need is to spend what little wealth they have on another Arab-Israeli war. Egypt desperately needs to spend its money on agricultural development so it can feed its citizens.

For Israel, there is also an economic motivation. Even though per capita income in Israel is very high, the burden of defense has given Israel's citizens the highest tax rates in the world and annual inflation rate of 40 percent or more.

Another powerful motivation for peace on the Arab side—especially in oil-rich Saudi Arabia—is the fear of a resurgence of Arab radicalism in Syria, Iraq and perhaps even Egypt. Soviet-inspired Arab radicals would be a serious threat to the existence of conservative Arab state like Saudi Arabia.

Sadly, the fact that all nations want peace—for differing but very good reasons—doesn't mean that peace will come. As the headlines tell us every day, the peace negotiations threaten constantly to fall apart.

Here are some factors which may, individually or collectively, scuttle the current peace initiatives and lead to another war in the Middle East.

Thirty years of hostility and isolation on the part of the Israelis and Arabs. It's hard to assume good will on the part of someone you've fought with four times in 30 years, and there has been zero contact between individual citizens or officials of the nations. Despite President Sadat's dramatic gesture of acceptance, a vast reservoir of fear, mistrust and misunderstanding still exists among the Arabs and Israelis. I could sense it in every nation we visited, but especially in Israel, where Israelis see themselves as a beleaguered 3 million people pitted against 150 million Arabs bent on destroying them.

Territorial considerations—again as the news media tell us—produce a wide gulf between the two sides. United Nations resolutions 242 and 338 call for return to Egypt, Jordan and Syria of lands occupied by Israel in the 1967 war. To the Arabs of every nation we visited, that means return of ALL occupied lands. To the Israelis, retention of part of the occupied lands seems imperative to their security in their event of future hostilities. On the helicopter flight, the Israelis took us to a point on the occupied West Bank where return to the 1967 borders would put only nine miles between an Arab state and the Mediterranean Sea. The same helicopter took us to the Golan Heights, where Syrian territory looks down within easy rifle fire range of Israeli settlements.

Those Israeli concerns puzzle and infuriate Anwar Sadat, who told us at his retreat near the Aswan Dam that Israel doesn't understand the new reality opened up by his November visit to Jerusalem—that security for Israel lies not in land but in the peaceful intent of her Arab neighbors.

Yes, say the Israelis, but Sadat will not live forever, and he cannot speak for all 21 Arab nations.

The personalities of the two principal actors on the negotiating stage—Begin and Sadat—are also a factor which could bear heavily on success or failure of peace talks. In his meeting with us, Sadat did not seem emotional and impetuous, but his impatience with the peace negotiations suggests that he

may be. On the other hand, I can report that Begin in person definitely comes across as the doctrinaire hard-liner you've heard about. After two encounters with Begin, our congressional delegation was generally pessimistic that Begin could muster the flexibility to conduct sensitive political negotiations. The Egyptian foreign minister was visibly angered when Begin, giving a toast at what was to be a pleasant social occasion, made a partisan speech. We Americans present couldn't blame the Egyptian for being angry.

Domestic political considerations complicate matters for both Begin and Sadat. The latter has Arab hard-liners like Syria, Iraq, Libya and Algeria sniping at him. Sadat has to appear to be standing fast on Arab demands for return of all occupied lands and for self-determination for Palestinians. For his part, Begin is a prisoner of his own past rhetoric and that of his political party, the conservative Likud. To them, the occupied West Bank of the Jordan River is the ancient Jewish lands of Judea and Samaria.

When Sadat and Begin make statements designed for consumption by their domestic critics, they appear inflammatory when radio, television and newspapers carry them to the other nation.

And for domestic political reasons, Sadat feels the negotiations must proceed speedily so Arabs will see concrete results of the bold Sadat initiative. Begin says he needs slow negotiations so that Israelis can get used to the idea that maybe the Arabs really will live in peace with them.

Despite all this, will peace come? Can the hazards be surmounted? At this point, it's an act of real optimism to believe so. Nonetheless, both the Israelis and the Egyptians insist that the peace process has proceeded too far to be reversed. I hope they are right.

WASHINGTON REPORT

(By DON J. PEASE)

Iran and Saudi Arabia, both of which I visited during my recent three-week trip to the Middle East, have several interesting similarities.

Both maintain very close and friendly relations with the United States.

Both are staunchly anti-communist and deeply suspicious of the Soviet Union.

Both have ambitious programs to modernize themselves.

That's on the plus side.

Additionally, both have autocratic governments which are the opposite of the American concept of democratic rule.

At a time when President Jimmy Carter has raised worldwide the banner of human rights, both Iran and Saudi Arabia have poor records on human rights.

At the time when Carter is trying to slow the rapid spread of weapons of death and to reduce the role of the U.S. as the arms merchant of the world, both Iran and Saudi Arabia are pressing the U.S. hard to supply them with highly-sophisticated new weapons.

Yet the ability of the U.S. to resist those arms pressures and to seek improved human rights conditions in the two nations is severely hampered.

For there is one more important similarity between Iran and Saudi Arabia.

Both have the United States over an oil barrel. We are so heavily dependent upon them for oil—and they know we are—that U.S. policy options toward the two nations must always take oil into account.

In the case of Iran, the U.S. is in a tight bind but not a stranglehold. Iran supplies the United States with over 800,000 barrels of oil each day—about 10 percent of our imports. Because Iranian oil fields are approaching the peak of their productive capacity, it is expected that Iran will continue to supply about 10 percent of U.S. oil import needs.

With Saudi Arabia, the picture is ominously different.

First, Saudi Arabia supplies the U.S. now with over 1.5 million barrels of oil per day—20 percent of our daily imports and a full 10 percent of total U.S. consumption from both domestic and imported sources. For every 10 days that American gas stations are open, one day is Saudi Arabian oil day.

Secondly, Saudi Arabia—with 25 percent of the total world oil reserves—has a life-or-death hold on the future economic health of the United States and other western industrial nations. By 1985, it is estimated that daily U.S. demand for oil will increase by over 6 million barrels per day. New oil wells in the U.S. will meet only about 1 million barrels of that demand. The rest must come from imports, chiefly from the one nation that has a significant ability to increase its oil production—Saudi Arabia.

Within a half hour of my arrival in Riyadh, the capital of Saudi Arabia, other congressmen and I were told the brutal facts by American diplomatic officials. Unless Saudi Arabia agrees to double its daily production from 8.5 to 16.6 million barrels per day by 1985, there will be a severe world-wide shortage of oil. The price of an imported barrel of oil is likely to jump from the current $14 per barrel to between $30 and $45 per barrel.

From the viewpoint, then, of the United States, Japan and western Europe, it is imperative that Saudi Arabia agree to double its production of oil.

What about from the Saudi viewpoint? It is hard to avoid the conclusion that increasing oil capacity is not in the best interests of Saudi Arabia.

In the first place, the Saudis need produce only 5 million barrels of oil daily to provide the government with all the revenue it can possibly use for its ambitious programs to transform Saudi Arabia into a modern nation. The additional 3.5 million barrels currently being produced each day yield only money (mostly U.S. dollars) which—when invested—is eaten up by inflation. Saudi officials like Crown Prince Fahd, with whom we talked, are convinced that a barrel of oil in the ground will grow in value a lot more than an American dollar over the next several years.

Secondly, the huge Saudi oil reserves are not endless. The proven reserves will last about 50 years at the current rate of production. If the Saudis give in to U.S. pleading to double production, the proven reserves will last only about 25 years. Looking to their own future well-being, Saudi Arabian officials are developing a petrochemical industry which uses oil as a raw material for plastics, synthetic fibers and a hundred other products. As Zaki Yamani, the Saudi minister of petroleum, told me, "There will come a time when future generations will curse us for wasting oil as a fuel instead of saving it for use as a raw material."

Despite these convincing reasons for not increasing production, Saudi Arabia may do it anyhow. Saudi officials say they do recognize a responsibility to the economic health of the western world. Pragmatically, they know that world-wide economic chaos resulting from an oil crisis would be fertile ground for communism, which the Saudis strongly fear.

Clearly, however, the Saudis dislike the idea of their precious oil flowing so fast to meet the insatiable demands of the western nations. They are watching closely efforts by President Carter and the Congress to establish a national energy policy for the U.S.

Just as clearly, the U.S. dependence on Saudi oil limits severely our ability to restrict arms sales to Saudi Arabia and, to a lesser extent, Iran. That may explain why Saudi Arabia and Iran received 57 percent of all U.S. arms sales in 1976 and 68 percent of all sales in 1977.

To their credit, the Saudi officials never mentioned oil in the same breath as the super-sophisticated F-15 fighter planes they want to buy from the U.S. this year. But to the 15 congressmen who spent three days in Saudi Arabia, the connection was not hard to make.

WASHINGTON REPORT NO. 3

(By DON J. PEASE)

In this last column of a three-part series on my recent 20-day trip to the Middle East, I want to report on several general impressions that I gained from my discussions with heads of state and other governmental leaders.

The first two I have covered in detail in previous columns, and I will only summarize them here.

PEACE

The governmental leaders and, I believe, the people of all seven nations that we visited, are eager for peace to come to the Middle East. But there are enormous complications—involving historical considerations, strategic considerations and even the personalities of national leaders—which jeopardize the peace talks and make it very possible that peace will not be achieved despite the general longing for an end to 30 years of hostilities.

OIL

The alarming dependence of the United States upon Middle East oil, a dependence which is projected to grow dramatically by 1985, is of great concern not only to Americans but also to Saudi Arabian and Iranian leaders who are worried about how their countries will survive when their supplies of oil are gone.

Here are some other strong impressions which I have picked up during nearly three weeks of intensive conversations with Middle East leaders:

DEVELOPMENT

Every nation we visited was intensely interested in its own internal development. Growing enough food for the people, providing jobs for them, raising the national per capita income are overriding concerns. Where official U.S. aid is available (only to the poorest of the nations) it is greatly appreciated and is seen by foreign ledaers as a crucial element in their development plans. All of the nations we visited, bar none, were eager for the cooperation of American corporations, farm experts and others in furthering the development of local economies. The Syrians, for example, who disagree with the United States violently on how the Middle East peace talks should proceed, made it crystal clear that they desire the most friendy ties with the United States in the economic area.

The Soviet Union is held in low regard by almost all Middle East leaders, even including the Syrians, who receive considerable military and economic aid, but accept Soviet help out of practical necessity rather than any regard for the Russians. The Soviets are considered to be unreliable in the long term as either suppliers of military equipment or partners in economic development. In Israel, in Iran and in five Arab nations that we visited, the leaders distrust the Soviet Union, believing that the Russians are not sincerely interested in any nation of the Middle East or Africa.

The United States, on the other hand, is seen as not having an American ax to grind when it participates in the development of Middle Eastern nations. The U.S. is seen as genuinely interested in a Middle East peace settlement. That accounts for the unusual fact that both sides in the highly volatile Arab-Israeli situation look to the United States as an "honest broker", striving to bridge the gap between them.

CONFLICT

Middle Eastern leaders are convinced that the Soviet Union has only one basic strategy and purpose in the Middle East and Africa—to create unsettled economic and political conditions so that radical Marxist groups can gain political power. The United States and the Soviet Union are engaged in a global competition on a nation-by-nation basis, the Soviets trying to foment instability and the United States trying to promote stability. If that sounds like too much of a self-serving, flag-waving American viewpoint, it came not from Americans but from the top leaders of the Middle East. The current armed conflict between Ethiopia and Somalia was brought to our attention time and again as a prime example of Soviet trouble-making.

U.S. DIPLOMATS

In each nation we visited, we came into close contact with the U.S. ambassadors to those nations and to career foreign service officers working in the embassies. I was very pleased to find that the ambassadors were a very impressive group of people. Most were career foreign service officers who showed a fantastic knowledge of the social, economic and political traditions of the nations to whom they represented the United States government. The two ambassadors who were non-career, politically-appointed types displayed less expertise, but they came across as competent, hard-working individuals. There was not an "ugly American" in the lot. All seemed to have the respect, admiration and trust of the Middle East leaders with whom they worked.

CARTER AND VANCE

It was a great experience for a group of 15 American congressmen, visiting nation after nation, to find the universally-high degree of respect accorded to our country's two highest diplomatic representatives, Secretary of State Cyrus Vance and President Jimmy Carter. Without exception, Middle East leaders told us that they view Carter as men they can trust, who are genuinely interested in peace and progress for the nations of the Middle East, and who are friends in a very personal sense of the Middle East leaders they have met and worked with.

AN APOLOGIST FOR TERRORISM VISITS CAPITOL HILL

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. McDONALD. Mr. Speaker, on Tuesday, January 31, Members and staff were invited by the ad hoc monitoring group on South Africa to hear a briefing by Donald Woods, a South African journalist who recently fled his country. The ad hoc group consisted of our colleague, THOMAS J. DOWNEY, of New York, and ANDREW MAGUIRE, of New Jersey. A member of my staff attended the briefing and reported to me on the discussion.

Representative DOWNEY opened the meeting by announcing that only staff and Members would be permitted to attend, as at a previous briefing, South African representatives had been present and revealed to the press matters that had been discussed, to the embarrassment of the organizers. My staff member reported, however, that Mr. Woods said little that he had not repeated at other gatherings, and later that day in congressional testimony. The only major difference was that, at the congressional briefing, questions were asked that seemed to upset Mr. Woods.

Woods stated in his opening remarks that in South Africa the security laws were "quite crazy" and designed to stamp out dissidents. He admitted, however, that he had edited his newspaper for 10 years, was often critical of the Government and that he himself had not been banned until last October.

He urged the United States to withdraw or downgrade its diplomatic relations with South Africa; institute a tougher visa policy which would bar South African visitors from the United States; and institute an economic embargo that would end both trade and loan capital to South Africa. He further stated that some people urge continued business with South Africa, because it benefits the blacks. He denied this and said the representative leaders of the African blacks, Nelson Mandela, Robert Mangaliso Sobukwe, and Steve Biko, all opposed trade with South Africa.

He warned that if South Africa does not give in to the demands of the responsible black leaders they would be faced with revolutionary Marxist-Leninists in the future. Woods further stated that if the United States does nothing against South Africa there would be racial civil war and the blacks would be hostile to the West.

Representative DOWNEY questioned Woods about the effect in South Africa of statements made in support of the Government by Gov. Meldrim Thomson of New Hampshire. Woods answered that the impression that was given was that Governor Thomson spoke for most Americans. He said in a joking manner that most Americans held the opposite view.

A questioner from the audience asked about Woods' view about repressive regimes in the Soviet Union and the rest of the Communist world. Woods answered that while he deplored repression, South Africa was worse than the Communists and that this matter was irrelevant, because the issue of the day is racism. Woods did not respond to statements from the audience showing that the Soviet Union was far more repressive than South Africa could ever be. He seemed disinterested.

Another questioner asked about the statement by Woods concerning responsible black leaders. Woods acknowledged that he felt that Mandela and Sobukwe were such leaders. He was asked that in light of the fact that he had just warned against revolutionary Marxist-Leninists, why was he promoting Mandela and Sobukwe who are Marxist-Leninist terrorists. He denied that they were. The questioner then pointed out that Mandela was the leader of the terrorist arm of African National Congress, which was called Spear of the Nation (Umkhonto We Sizwe). African National Congress is controlled by the Communist Party of South Africa, and receives financial support from the Soviet Union. Sobukwe's group, the Pan-Africanist Congress, proclaimed themselves Maoists and receives financial support from Red China. Both of these groups have engaged in terrorist attacks on innocent civilians. Congressman DOWNEY responded that it does not matter if they are terrorists since Menachem Begin, Prime Minister of Israel, was also a terrorist. The questioner pointed out that Begin had never killed innocent civilians, but Mandela and Sobukwe had.

Mr. Chairman, that is the essential difference between freedom fighters and terrorists. Freedom fighters make war on the enemy army, terrorists make war on innocent civilians. The Communist-led African National Congress publicly took responsibility for a series of bombings September 16, 1976, in Cape Town, South Africa. Their official communique was published in SECHABA, Official Organ of the African National Congress South Africa (Second Quarter, 1977). SECHABA is printed in English in Communist East Germany.

The communique follows:

DECEMBER 16TH IS A HISTORIC DAY IN THE FREEDOM STRUGGLE

The national liberation movement, under the leadership of the ANC, formed Umkhonto We Sizwe in 1961 when it became clear that only through armed struggle—no matter how long and bloody—could freedom be won. Umkhonto provides our people with the skills of modern warfare. The bomb blasts and sabotage actions that rocked South Africa in the early 1960's are being heard again. Now the conditions and opportunities for our struggle have become more favourable. The oppressor will be met bullet for bullet here in South Africa. Our youth—African, Indian and Coloured—must join Umkhonto in ever bigger numbers and train to become skilled freedom fighters. Remember: to succeed in struggle it is essential to be disciplined, organised and correctly to identify the enemy. You must be part of an organisation, part of a revolutionary movement—the ANC with its allies and military wing Umkhonto We Sizwe will lead our people to victory!

Countrymen and comrades: You have shown your courage and contempt for death. With such fighting spirit and unity our final victory is assured. Let us continue to convert our anger into revolutionary action. Let us harass the enemy on every front.

On this December 16th—Heroes Day—the NC dips its revolutionary banner in memory of all those comrades who have fallen in battle. To all the parents we say "Be proud for giving birth to such heroic children. They have not died in vain and we will continue the battle until victory is won."

To all of you we say: Forward brave fighters! Forward brothers and sisters! Maintain your revolutionary unity and fighting spirit. Together we will raise the struggle to more glorious heights The blood of our people has made us stronger and more determined.

Amandla Ngawethu.
The Struggle Continues.
Victory is certain.

At his press conference on February 2, 1978, Woods told a reporter that Mandela is not a Communist and Sobukwe is not a Maoist, but a Christian. I would like to commend to my colleagues the documentation on the Communist and terrorist activities of these two men that Woods would like to see rule South Africa. The documentation appeared in Terrorism, a staff study prepared by the Committee on Internal Security, U.S. House of Representatives, August 1, 1974. His support for terrorists and lack of concern for the violation of human rights behind the Iron Curtain cast serious doubts on the integrity and credibility of Donald Woods.

Excerpts from the House Internal Committee staff study follow:

SOUTH AFRICA (AZANIA)—AFRICAN NATIONAL CONGRESS

The African National Congress (ANC), the oldest of the southern African revolutionary parties, was formed in South Africa in 1912. It was outlawed in 1960.

According to The African Communist for January-March 1963 (p. 8), Moses Kotane, former secretary-general of the South African Communist Party, has served as a member of the executive committee of the African National Congress. Other Communist Party functionaries including J. B. Marks and Albert Nzula have also served on the executive committee, according to The African Communist of July-September 1964 (p. 11).

In 1961 the Communist Party decided to lead the African National Congress into a campaign of terrorism. An official of the African National Congress, Nelson Mandela, was placed in charge of the terrorist organization called Umkonto We Sizwe (Spear of the Nation).

On July 11, 1963 the police raided a farm near Johannesburg and captured many of the leaders of the terrorist movement including some white and black communists. The finding of the judge president in the trial of the Umkonto We Sizwe terrorists was that the African National Congress was "communist dominated." (See pamphlet, "Rivonia, Operation Mayibuye," a review of the Rivonia trial by H.H.W. DeVilliers, published in Johannesburg in 1964.)

Subsequently, Abram Fischer, a white Communist Party member and member of a prominent Afrikaans family, was captured. He admitted during his trial in 1966 that the leaders of the terrorist movement had given assurances to the Communist Party that no action would be taken without prior consultation with the party. As a result Mandela was allowed to choose the leadership of the terrorist movement. As Fischer said, "The Congresses and the Communist Party did not wish to have their membership held liable for every act of sabotage * * *."[63]

Despite the arrest of much of the terrorist leadership, the remnants of Umkonto We Sizwe continued to engage in terrorist activities and to coordinate with other African terrorist groups including ZAPU of Rhodesia, Frelimo of Mozambique, and the MPLA of Angola, according to The African Communist, Fourth Quarter, 1967 (pp. 5–8).

Sechaba, the official organ of the African National Congress of South Africa, and Zimbabwe Review, the official organ of the Zimbabwe African Peoples' Union (ZAPU) in Rhodesia, are both printed in English in East Germany.

The African Communist was originally published in England and still lists a London address. However, for a number of years it has been printed in East Germany. (See the African Communist, Second Quarter, 1970, p. 120.)

The editor of The African Communist until his death on June 18, 1974, was Michael Harmel. A white member of the central committee of the South African Communist Party, Harmel had spent the last few years in Czechoslovakia as a member of the editorial board of World Marxist Review, the international communist theoretical organ. In order to maintain the pretense that the South African Communist Party was led by Blacks, Harmel used the pen names of Umlweli, Titshale, Terence Africanus and A. Lerumo. An obituary article on Michael Harmel appeared in the Daily World, June 22, 1974 (p. 10).

The African Communist, a quarterly published "as a forum for Marxist-Leninist thought throughout our continent, by the South African Communist Party," in 1963 published a statement by the central committee of the South African Communist Party stating why acts of violence were necessary in South Africa, The party declared:

* * * the oppressed masses are turning to methods that are illegal and nonpeaceful. They are looking to illegal organizations like the African National Congress and the Communist Party for leadership and liberation. Violent outbreaks of one sort or another are becoming more and more common. Sometimes, as in the case of the operations of Umkonto We Sizwe, these outbreaks are purposeful, effective and carefully planned on a nation-wide level. * * *"[64]

The SACP proceeded to denounce the Poquo guerrillas sponsored by the Pan-Africanist Congress for their "uncontrolled and violent" outlook of "blind revenge on Whites."[65]

The African Communist for July-September 1960 carries an account of the arrest of seven people involved with the ANC, the SACP and the Spear of the Nation in 1963. The magazine said that "The police found many confidential documents, including 'Operation Mayibuye,' the Umkonto We Sizwe draft plan for guerrilla warfare." A tenant of a farm, a member of the SACP, was arrested, the article continued. He had:

"* * * documents in his handwriting indicating that he had been sent abroad on a mission to find whether arms could be obtained for the Umkonto soldiers."

* * * * *

"Among the documents discovered at Rivonia were manuscripts in the handwriting of Nelson Mandela, who had found refuge at the farm at one stage of his underground leadership. Next to Chief Lutuli, Mandela has become the best known and most popular of the Congress leaders. * * *"

* * * * *

"* * * The leaders in the dock * * * disdained to repudiate * * * or to deny the part that some of them had played in Umkonto. * * * "I admit immediately," said Mandela, "that I was one of the persons who helped to form Umkonto We Sizwe, and that I played a prominent role in its affairs until I was arrested in August 1962." "

* * * * *

" 'I do not deny that I planned sabotage,' said Mandela, 'I did not plan it in a spirit of recklessness, nor because I have any love of violence. I planned it as a result of a calm and sober assessment of the political situation that had arisen * * *.' "

* * * * *

"* * * Mandela vigorously defended the A.N.C. policy of cooperation with the [Communist] Party in the common struggle for national liberation. Leading Communists * * * had served on the National Executive of the A.N.C. This was not surprising, he pointed out. The Party had for very many years fought side by side with the Congress: many Africans equated Communism with Freedom * * *"[66]

Over the years the Soviets have used ANC and its leader, Oliver Tambo, to contact various emerging African military groups.[67]

The Maoist group operating in South Africa is the Pan-Africanist Congress (PAC), founded in 1959 by Mangaliso Sobukwe. Originally advocating nonviolence, PAC turned to Maoism in 1963 and organized its members into clandestine cells.[68] In 1963 PAC claimed sponsorship of the Poqo guerrilla terrorists in South Africa.[69]

In 1967, PAC leader Potlako Leballo described his strategy as "simultaneous, protracted rural and urban guerrilla warfare" which would "pin down the enemy in the cities at the outset."[70]

Despite these threats, the South African "liberation forces" have been only minimally active during 1972 and 1973. Oliver Tambo explained this in an interview in the November 1973 issue of Muhammad Speaks, publication of the Nation of Islam (Black Muslims), a violently antiwhite organization whose members have been involved in violent conflicts with local police:[71]

"* * * one simply can't place South Africa in the same category as every other country and say, "There is fighting here, why isn't fighting there?" We know historically and have decided that the answer to the situation is armed struggle. That stage of actual fighting must be reached as part of the process of struggle. Its timing must fit the conditions that prevail."[72]

While ANC is not yet, based on Tambo's statement, ready for armed struggle, one of their spokesmen, Tennyson Makiwane, has stated that ANC has "an operative link with the underground unions of the black workers."[73] This remark takes on added significance when taken in context with the recent strikes in South Africa and the statement made in the July 1973 issues of the South African Communist Party magazine, Inkululeko, that "strikes are a potent force because they begin to instill fear into the capitalists; because they help to educate the workers about the true nature of the capitalist state."[74]

The article stresses that the strikes must be seen in the context of the political and ideological struggles, and quotes Lenin who wrote, "Strikes are a school of war and not the war itself, strikes are only one means of struggle, one aspect of the working class movement." States the article, "The white ruling class will not surrender its control of the State without a violent struggle, therefore the continuation of the preparation for such a struggle is essential for victory.* * *"

TIPS ON HOW TO AVOID OVERPAYMENT OF INCOME TAX BY OLDER AMERICANS

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. PEPPER. Mr. Speaker, in my position as chairman of the Select Committee on Aging, I am acutely aware older Americans are often faced with economic hardship due to limited, if not fixed, incomes. It is alarming to realize that a great number of older Americans are overpaying their income taxes, and thus losing additional income, by failing to take advantage of legal tax reduction mechanisms.

Provisions of the Tax Reduction and Simplification Act of 1977 have made possible increased tax relief for many

Americans. However, individuals cannot take advantage of these provisions and minimize their tax liabilities unless they are aware of the changes in the tax law.

The Senate Special Committee on Aging has revised its annual checklist of itemized deductions. This summary can serve as an invaluable tool to the elderly—even to nonelderly persons—as 1977 Federal income tax time approaches. I commend the committee for its efforts and submit its summary here for the benefit of all who may read it:

PROTECTING OLDER AMERICANS AGAINST OVERPAYMENT OF INCOME TAXES

(A Revised Checklist of Itemized Deductions for Use in Taxable Year 1977)

CHECKLIST OF ITEMIZED DEDUCTIONS FOR SCHEDULE A (FORM 1040)

Medical and dental expenses

Medical and dental expenses (unreimbursed by insurance or otherwise) are deductible to the extent that they exceed 3 percent of a taxpayer's adjusted gross income (line 31, Form 1040).

Insurance premiums

One-half of medical, hospital, or health insurance premiums are deductible (up to $150) without regard to the 3 percent limitation for other medical expenses. The remainder of these premiums can be deducted, but is subject to the 3 percent rule.

Drugs and medicines

Included in medical expenses (subject to 3-percent rule) but only to extent exceeding 1 percent of adjusted gross income (line 31, Form 1040).

Other medical expenses

Other allowable medical and dental expenses (subject to 3-percent limitation):

Abdominal supports (prescribed by a doctor)
Acupuncture services
Ambulance hire
Anesthetist
Arch supports (prescribed by a doctor)
Artificial limbs and teeth
Back supports (prescribed by a doctor)
Braces

Capital expenditures for medical purposes (e.g., elevator for persons with a heart ailment)—deductible to the extent that the cost of the capital expenditure exceeds the increase in value to your home because of the capital expenditure. Taxpayer should have an independent appraisal made to reflect clearly the increase in value.

Cardiographs
Chiropodist
Chiropractor
Christian Science practitioner, authorized
Convalescent home (for medical treatment only)
Crutches
Dental service (e.g., cleaning, X-ray, filling teeth)
Dentures
Dermatologist
Eyeglasses
Food or beverages specially prescribed by a physician (for treatment of illness, and in addition to, not as substitute for, regular diet; physician's statement needed)
Gynecologist
Hearing aids and batteries
Home health services
Hospital expenses
Insulin treatment
Invalid chair
Lab tests
Lipreading lessons (designed to overcome a handicap)
Neurologist
Nurses services (for medical care, including nurse's board paid by you)
Occupational therapist
Ophthalmologist
Optician
Optometrist
Oral surgery
Osteopath, licensed
Pediatrician
Physical examinations
Physical therapist
Physician
Podiatrist
Psychiatrist
Psychoanalyst
Psychologist
Psychotherapy
Radium therapy
Sacroiliac belt (prescribed by a doctor)
Seeing-eye dog and maintenance
Speech therapist
Splints
Supplementary medical insurance (Part B) under Medicare
Surgeon
Telephone/teletype special communications equipment for the deaf

Transportation expenses for medical purposes (7¢ per mile plus parking and tolls or actual fares for taxi, buses, etc.)

Vaccines
Vitamins prescribed by a doctor (but not taken as a food supplement or to preserve general health)
Wheelchairs
Whirlpool baths for medical purposes
X-rays

Taxes

Real estate
State and local gasoline
General sales
State and local income
Personal property

If sales tax tables are used in arriving at your deduction, you may add to the amount shown in the tax tables only the sales tax paid on the purchase of five classes of items: automobiles, airplanes, boats, mobile homes, and materials used to build a new home when you are your own contractor.

When using the sales tax tables add to your adjusted gross income any nontaxable income (e.g., Social Security, Veterans' pensions or compensation payments, Railroad Retirement annuities, workmen's compensation, untaxed portion of long-term capital gains, recovery of pension costs, dividends untaxed under the dividend exclusion, interest on municipal bonds unemployment compensation and public assistance payments).

Contributions

In general, contributions may be deducted up to 50 percent of your adjusted gross income (line 31, Form 1040). However, contributions to certain private nonprofit foundations, veterans organizations, or fraternal societies are limited to 20 percent of adjusted gross income.

Cash contributions to qualified organizations for (1) religious, charitable, scientific, literary or educational purposes, (2) prevention of cruelty to children or animals or (3) Federal, State or local governmental units (tuition for children attending parochial schools is not deductible). Fair market value of property (e.g., clothing, books, equipment, furniture) for charitable purposes. (For gifts of appreciated property, special rules apply. Contact local IRS office.)

Travel expenses (actual or 7 cents per mile plus parking and tolls) for charitable purposes (may not deduct insurance or depreciation in either case).

Cost and upkeep of uniforms used in charitable activities (e.g., scoutmaster).

Purchase of goods or tickets from charitable organizations (excess of amount paid over the fair market value for the goods or services).

Out-of-pocket expenses (e.g., postage, stationery, phone calls) while rendering services for charitable organizations.

Care of unrelated student in taxpayer's home under a written agreement with a qualifying organization (deduction is limited to $50 per month).

Interest

Home mortgage.
Auto loan.
Installment purchases (television, washer, dryer, etc.).

Bank credit card—can deduct the finance charge as interest if no part is for service charges, loan fees, credit investigation fees, or similar charges.

Points—deductible as interest by buyer where financing agreement provides that they are to be paid for use of lender's money. Not deductible if points represent charges for services rendered by the lending institution (e.g., VA loan points are service charges and are not deductible as interest). Not deductible if paid by seller (are treated as selling expenses and represent a reduction of amount realized).

Penalty for prepayment of a mortgage—deductible as interest.

Revolving charge accounts—may deduct the "finance charge" if the charges are based on your unpaid balance and computed monthly.

Other charge accounts for installment purchases—may deduct the lesser of (1) 6% of the average monthly balance (average monthly balance equals the total of the unpaid balances for all 12 months, divided by 12) or (2) the portion of the total fee or service charge allocable to the year.

Casualty or Theft Losses

Casualty (e.g., tornado, flood, storm, fire, or auto accident provided not caused by a willful act or willful negligence) or theft losses to nonbusiness property—the amount of your casualty loss deduction is generally the lesser of (1) the decrease in fair market value of the property as a result of the casualty, or (2) your adjusted basis in the property. This amount must be further reduced by any insurance or other recovery, and, in the case of property held for personal use, by the $100 limitation. You may use Form 4684 for computing your personal casualty loss.

Miscellaneous

Appraisal fees for casualty loss or to determine the fair market value of charitable contributions.
Union dues.
Cost of preparation of income tax return.
Cost of tools for employee (depreciated over the useful life of the tools).
Dues for Chamber of Commerce (if as a business expense).
Rental cost of a safe-deposit box for income-producing property.
Fees paid to investment counselors.
Subscriptions to business publications.
Telephone and postage in connection with investments.
Uniforms required for employment and not generally wearable off the job.
Maintenance of uniforms required for employment.
Special safety apparel (e.g., steel toe safety or helmets worn by construction workers; special masks worn by welders).
Business entertainment expenses.
Business gift expenses not exceeding $25 per recipient.
Employment agency fees under certain circumstances.
Cost of periodic physical examination if required by employer.
Cost of installation and maintenance of a telephone required by the taxpayer's employment (deduction based on business use).
Cost of bond if required for employment.
Expenses of an office in your home if employment requires it.
Payments made by a teacher to a substitute.
Educational expenses required by your employer to maintain your position or for

maintaining or sharpening your skills for your employment.

Political Campaign Contributions.—Taxpayers may now claim either a deduction (line 31, Schedule A, Form 1040) or a credit (line 38, Form 1040), for nomination or election to any Federal, State, or local office in any primary, general or special election. The deduction or credit is also applicable for any (1) committee supporting a candidate for Federal, State, or local elective public office, (2) national committee of a national political party, (3) State committee of a national political party, or (4) local committee of a national political party. The maximum deduction is $100 ($200 for couples filing jointly). The amount of the tax credit is one-half of the political contribution, a $25 ceiling ($50 for couples filing jointly).

Presidential election campaign fund

Additionally, taxpayers may voluntarily earmark $1 of their taxes ($2 on joint returns) for the Presidential Election Campaign Fund.

Additional information

For any questions concerning any of these items, contact your local IRS office. You may also obtain helpful publications and additional forms by contacting your local IRS office.

Other tax relief measures

Filing status	*Required to file a tax return if gross income is at least—*
Single (under age 65)	$2,950
Single (age 65 or older)	3,700
Qualifying widow(er) under 65 with dependent child	3,950
Qualifying widow(er) 65 or older with dependent child	4,700
Married couple (both spouses under 65) filing jointly	4,700
Married couple (1 spouse 65 or older) filing jointly	5,450
Married couple (both spouses 65 or older) filing jointly	6,200
Married filing separately	750

Additional Personal Exemption for Age.—Besides the regular $750 exemption allowed a taxpayer, a husband and wife who are 65 or older on the last day of the taxable year are each entitled to an additional exemption of $750 because of age. You are considered 65 on the day before your 65th birthday. Thus, if your 65th birthday is on January 1, 1978, you will be entitled to the additional $750 personal exemption because of age for your 1977 Federal income tax return.

"Zero Bracket Amount" (Standard Deduction).—The former standard deduction has been replaced by a flat amount the law calls "zero bracket amount." This amount depends on your filing status. It is no longer a separate deduction as such; instead, the equivalent amount is built into the new simplified tax tables and tax rate schedules. Since this amount is built into the tax tables and tax rate schedules, taxpayers who itemize deductions will need to make an adjustment. However, itemizers will not experience any change in their tax liability and the tax computation will be simplified for many itemizers.

New Tax Tables.—New simplified tax tables have been developed to make it easier for you to find your tax if your income is under certain levels. Now, even if you itemize deductions, you may be able to use the tax tables to find your tax easier. In addition, you no longer need to deduct $750 for each exemption or figure your general tax credit, because these amounts are also built into the tax table for you.

General Tax Credit.—The general tax credit has been revised to take into consideration the exemptions for age and blindness. Married taxpayers filing separate returns will now be limited to a credit based on $35 per exemption.

Multiple Support Agreements.—In general, a person may be claimed as a dependent of another taxpayer, provided five tests are met: (1) Support, (2) gross income, (3) member of household or relationship, (4) citizenship, and (5) separate return. But in some cases, two or more individuals provide support for an individual, and no one has contributed more than half the person's support. However, it still may be possible for one of the individuals to be entitled to a $750 dependency deduction if the following requirements are met for multiple support:

1. Two or more persons—any one of whom could claim the person as a dependent if it were not for the support test—together contribute more than half of the dependent's support.

2. Any one of those who individually contribute more than 10 percent of the mutual dependent's support, *but only one of them,* may claim the dependency deduction.

3. Each of the others must file a written statement that he will not claim the dependency deduction for that year. The statement must be filed with the income tax return of the person who claims the dependency deduction. Form 2120 (Multiple Support Declaration) may be used for this purpose.

Sale of Personal Residence by Elderly Taxpayers.—A taxpayer may elect to exclude from gross income part or, under certain circumstances, all of the gain from the sale of his personal residence, provided:

1. He was 65 or older before the date of the sale, and

2. He owned and occupied the property as his personal residence for a period totaling at least 5 years within the 8-year period ending on the date of the sale.

Taxpayers meeting these two requirements may elect to exclude the entire gain from gross income if the adjusted sales price of their residence is $35,000 or less. (This election can only be made once during a taxpayer's lifetime.) If the adjusted sales price exceeds $35,000, an election may be made to exclude part of the gain based on a ratio of $35,000 over the adjusted sales price of the residence. Form 2119 (Sale or Exchange of Personal Residence) is helpful in determining what gain, if any, may be excluded by an elderly taxpayer when he sells his home.

Additionally, a taxpaver may elect to defer reporting the gain on the sale of his personal residence if within 18 months before or 18 months after the sale he buys and occupies another residence, the cost of which equals or exceeds the adjusted sales price of the old residence. Additional time is allowed if (1) you construct the new residence or (2) you were on active duty in the U.S. Armed Forces. Publication 523 (Tax Information on Selling your Home) may also be helpful.

Alimony Paid.—Payments for alimony are now adjustments to income. You no longer have to itemize deductions to claim a deduction for alimony you paid.

Credit for the Elderly.—An expanded and simplified credit for the elderly has replaced the former more complex retirement income credit.

A taxpayer may be able to claim this credit and reduce taxes by as much as $375 (if single), or $562.50 (if married filing jointly), if the taxpayer is:

(1) Age 65 or older, or

(2) Under age 65 and retired under a public retirement system.

To be eligible for this credit, taxpayers no longer must meet the income requirement of having received over $600 of earned income during each of any 10 years before this year.

For more information, see instructions for Schedules R and RP.

Credit for Child and Dependent Care Expenses.—Certain payments made for child and dependent care may be claimed as a credit against tax.

If a taxpayer maintained a household that included a child under age 15 or a dependent or spouse incapable of self-care, a taxpayer may be allowed a 20-percent credit for employment related expenses. These expenses must have been paid during the taxable year in order to enable the taxpayer to work either full or part time.

For detailed information, see the instructions on Form 2441.

Earned Income Credit.—A taxpayer who maintains a household for a child who is under age 19, or is a student, or is a disabled dependent, may be entitled to a special payment or credit of up to $400. This is called the earned income credit. It may come as a refund check or be applied against any taxes owed. Generally, if a taxpayer reported earned income and had adjusted gross income (line 31, Form 1040) of less than $8,000, the taxpayer may be able to claim the credit.

Earned income means wages, salaries, tips, other employee compensation, and net earnings from self-employment (generally amount shown on Schedule SE (Form 1040, line 13). A married couple must file a joint return to be eligible for the credit. Certain married persons living apart with a dependent child may also be eligible to claim the credit.

For more information, see instructions for Form 1040 or 1040A.

WHY SHOULD FRANK CARLUCCI BE THE NO. 2 MAN AT THE CIA?

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. DRINAN. Mr. Speaker, I know that Members of the House will want to read very carefully a perceptive article in the New Republic of February 4, on Frank Carlucci. The article raises several questions about the competence and the credibility of Mr. Carlucci, who has been nominated to be Deputy Director of the CIA.

This thoughtful article raises several questions suggesting that Mr. Carlucci is less than competent to assume a very important and highly sensitive position in the Carter administration.

The article follows:

"OÙ EST CARLUCCI?"

(By Suetonius)

The story is still savored in the usually melancholy folklore of the Foreign Service. Congolese Premier Cyril Adoula is about to sit down to a White House luncheon in 1962. Looking around the state dining room and finding only John Kennedy, Dean Rusk, Robert McNamara and other notables, Adoula is distressed at the absence of the equally important American official who had befriended him in the old days in Leopoldville. "Où est Carlucci?" the Premier asks plaintively. "Who the hell is Carlucci?" Kennedy whispers in turn to Rusk, and aides are dispatched on a frantic search. In a cheap Foggy Bottom cafe they find Frank Charles Carlucci III, grandson of an immigrant Italian stonecutter, 32-year-old Foreign Service Officer Class 5, and buddy of Cyril Adoula. He is spirited off to the White House just in time to have dessert with the Premier,

and save the administration from the fate of a diplomatic incident.

For a generation of bureaucrats, that anecdote has been a relished vindication against the pretense and naivete of elected political leadership—and so, too, has Frank Carlucci's career. Rescued from a stalled ascent in the Foreign Service, thrust suddenly through a succession of high level positions in domestic affairs, eventually returned to diplomacy as a key ambassador, he was named in December to be Stansfield Turner's principal deputy at the Central Intelligence Agency. Like the Adoula story, it all seems the civil servant's fantasy come true, a tale of buried brilliance discovered and suitably rewarded. But Carlucci's remarkable rise has owed more to mundane politics than to brilliance. His appointment to the Central Intelligence Agency is another example of how the Carter administration has chosen to govern.

Carlucci belonged to that wave of middle-class Foreign Service recruits that swelled the corps with ambition, idealism and excess personnel in the 1950s. The stonecutter's son had become an insurance broker, and Frank III grew up comfortably. After Princeton, Harvard Business School, two years in the Navy, and an unpromising start with Jantzen Swimwear, he joined the State Department in 1956. There followed some routine clerical assignments in Washington, a commercial posting in Johannesburg, and then, in 1960, a junior political reporting job in Leopoldville during the Congo's bloody passage to independence (and American patronage). It was a brief moment of diplomatic swagger and exploit in US African policy, charged with the myths of cold war rivalry and before the military dictators and CIA subsidies settled in. In the Congo, Carlucci distinguished himself not only by the contact with Adoula, a future premier, but also by acts of bravery, in rescuing a car full of Americans from a Congolese mob after a traffic accident, and of diplomatic skill, in negotiating the release by Patrice Lumumba (another friend) of several Belgian hostages. He won a department superior service award, a place at the Congo desk in Foggy Bottom and later one of the Foreign Service's few outside-Washington plums for an officer of his grade, the lone Consul-Generalship on the island of Zanzibar.

After nine years in government, Carlucci had been promoted at steady and routine two-year intervals. In the summer of 1965 he was sent to Rio de Janeiro, where he spent the next four years in a series of embassy administrative jobs and won another bureaucratic award for his management of housekeeping chores spurned by most of his fellow officers. But in Rio, the African zeal and adventure already filed away, his career began noticeably—and, again, routinely—to slow and dull. Held at Class Three, the foreign service's make-or-break threshold to either senior rank or early retirement, Carlucci at 39, like so many other FSOs, began to melt indistinguishably into the bureaucracy. No intellectual gifts, no rare expertise singled him out among hundreds of equally talented officers. Not even his past bravery and citations guaranteed promotion to the top: during the Vietnam period department awards were handed out, as one winner recalled, "like Iron Crosses in 1918."

So early in 1969, Frank Carlucci was in Brazil, one more obscure, middle-level embassy official apparently without much of a future. Yet in the next six years, he received four presidential appointments, sat occasionally with the cabinet and became ambassador to Portugal with enough political weight to challenge the most powerful Secretary of State in recent memory. What his foreign service record obscured was that, more important than knowing Adoula or rescuing Americans in Africa or being efficient in Rio, Carlucci had also wrestled with Don Rumsfeld at Princeton.

When Rumsfeld gave up a congressional seat to become Richard Nixon's director of the Office of Economic Opportunity, he promptly brought Carlucci home from Rio in July 1969 to be his assistant director for operations. Carrying responsibility for the then-still-massive community action program, the job catapulted Carlucci not only far upward in the bureaucratic pecking order, but also into the midst of complex domestic issues for which he had no apparent grasp or concern. The reason for the appointment, however, was rudimentary. OEO was a stepchild agency which the Nixon White House viewed (like the State Department) as a disloyal Democratic preserve and relic. Rumsfeld, intending to dismantle the poverty program and expecting sniping on all sides, reached in time-honored Washington tradition for a personal friend with no obvious political liabilities and some bureaucratic experience at taking orders. For his part, of course, Carlucci did not question the logic of his deliverance. I've never had a strong preference for location," he told the *New York Times*. "I've always been more interested in the nature of the job."

In the event, the "nature" of this particular job was to go along dutifully with the Nixon squeeze on OEO, and thus to get along handsomely in a regime that appreciated but rarely found such professional loyalty. Little more than a year later, with Rumsfeld himself promoted to White House Counselor Carlucci was made director of the poverty program. Over the next six months he continued the Nixon-Rumsfeld policies without major change; cultivated an affable nonpartisan image with the Congress; and dodged the only covert political controversy by sponsoring a temporary compromise between Governor Ronald Reagan and California's Rural Legal Assistance program which Reagan wished to destroy. Carlucci presided over the steady attrition of the antipoverty effort policies which threatened legal services and other valuable reforms nationwide and which cut OEO's budget by more than half during Nixons' first term.

Presumably on the basis of that performance, Carlucci was elevated again in July 1971, this time to the White House itself to be number three man under George Schultz in the Office of Management and Budget. Again there were no obvious credentials to explain the change, though Carlucci had won what the press called (without undue elaboration) "high marks" for his management at OEO. Don Rumsfeld was still sitting down the corridor from the President. Discreetly supporting the fiscal policies that plunged the country deeper into recession, Carlucci stayed on at OMB through most of the Watergate collapse. Late in 1973, with White House backing, he became Caspar Weinberger's undersecretary at the Department of Health, Education and Welfare. A December 1973 speech before the Georgia chapter of the American Society of Public Administration provides a good example of Carlucci's contribution at HEW to the function of American social policy. The speech is a vintage example of bureaucratic prose celebrating as it does the "synergistic impact" and "program considerations" of better administration. Only Nixon's "New Federalism," the undersecretary assured his audience, would keep more people from "falling down the dependency ladder."

In November 1974, early in the Ford regime—in which Rumsfeld was White House Chief of Staff and eventually Secretary of Defense—Carlucci was named ambassador to Portugal. His qualifications for the job—past diplomatic experience and a knowledge of Portuguese—were plainer than for any of his recent appointments. Still, bureaucratic politics seemed once again decisive in Carlucci's rotation through high office. For a new administration nervously watching the fresh, volatile and leftward-swinging democracy in Portugal, he would be a certifiably safe, conservative envoy. Perhaps more important, he would also be Rumsfeld's protege, one of the few direct Ford links in an ambassadorial corps bureaucratically owned or co-owned by Henry Kissinger.

Carlucci performed predictably as ambassador. To questions at his confirmation hearing, he stoutly denied any CIA meddling in Lisbon. (When pressed by one senator on the elliptical language of his answers, he even showed a rare flash of public irritation: "It means that I know that there isn't," he replied curtly.) Carlucci may have been discreetly ignorant as an unbriefed appointee (not uncommon) or consciously dissimulating. But whatever the reason, his answers were inaccurate. At the time Carlucci testified, the CIA, with Kissinger's approval, was lavishly devoting both money and agents to shore up the most conservative elements in Portugal. Later, in 1975, when Kissinger moved toward a virtual aid embargo against the independent and still non-Communist Lisbon regime, Carlucci opposed the cut-off in what several sources remember as a "blistering" cable exchange. To the usual ambassadorial fervor for one's clients he added the old alliance with Rumsfeld, and thus won the battle with rare immunity from Kissinger's retaliation. At the same time, however, he also reportedly conditioned U.S. humanitarian aid to Portugal's collapsing African colonies on the ouster of the most vocally anti-American officials in Lisbon.

Now, having been kept on in Lisbon by the Carter administration, he returns to Washington to be deputy director of the CIA. Ironically, he is once more the White House's choice. And again he appears as the loyal, blurred bureaucrat needed to ride out controversy. Admiral Turner refused to pick a deputy from the Agency's hostile old-boy network, while the old boys themselves are still smarting from the forced retirement of 200 superannuated agents last autumn. So Carlucci is the administration's happy compromise. As at OEO, OMB, HEW and the Lisbon Embassy, not to mention all those Foreign Service postings long ago, he will be expected, with some confidence, to follow orders and "manage" things quietly. Beyond that, of course, his qualifications for the job are, as usual, rather vague.

In the Congo he quietly watched the widening CIA intervention that led indirectly to the murder of his friend Lumumba and even to the later overthrow of Adoula. He arrived in Rio only months after the CIA engineered the military coup against the elected Goulart regime, and watched quietly as the Agency administered covert subsidies and technical aid to keep the torture-prone Brazilian junta in power. At his own Lisbon Embassy he sat quietly as the local CIA station struggled to keep the new Portuguese democracy within proper bounds. Now he will be the only official short of Turner himself who will have the writ and means to monitor the full range of CIA operations. Under the reorganization plan just announced, the Agency will exercise unprecedented central control over the planning and execution of American espionage. That organizational grip probably will make Carlucci the single most powerful deputy in the government, and surely the most powerful in the history of the CIA.

In the lavish sunny office of the deputy director, he will be another classic bureaucrat somehow expected to command and temper the bureaucracy. To ride one of the rogue elephants of Washington institutions he comes from an apprenticeship as a pliant passenger in a Nixon administration run amok. The bravery and brashness of the young Foreign Service officer seem to have deserted Carlucci some time ago, worn away by the mores and unbroken success of his promotion. The man who saved Americans from a mob and freed Belgian hostages could

not bring himself to try (and it would have taken equal courage, there is no doubt) to rescue poverty programs from a mob mentality in the White House, or to release the health and educational advances held hostage by Nixon-Ford policy. If there is any ideology apparent in his record since 1969, it is certainly not that of his present employer. More apparent than any ideology, though, is the old bureaucratic pragmatism, the career greased by a willing suspension of belief. Carlucci is known for a clipped informality that often passes for self-assertion and strength in the otherwise oily culture of bureaucacy. By several accounts of those who have worked with him, critics as well as admirers, he is personally an easy, unpretentious man devoted to his work—not at all unlike hundreds of his kind in the huge, faceless civil service from which he emerged eight years ago. And when the man is measured against his offices, particularly the CIA, what stands out is not evil or danger or gross incompetence, but simply the utterly pedestrian quality of it all.

Carlucci will not be alone at the upper reaches. On the National Security Council staff, at the State Department, in a dozen important embassies, under Andrew Young at the UN—in nearly every precinct of foreign policy, there remain men who similarly owe their rank, their present authority, in large part to the dubious people and practices Jimmy Carter was elected to replace. This feckless resort to bureaucratic government—the loss of independence and commitment beyond self, the further atrophy of merit and idealism—is expensive. The politics that now return Frank Carlucci to Washington, like those that hoisted him out of oblivion during the Nixon years, are still the politics of a closed system.

Last spring, when senior State Department bureaucrats put forward Carlucci's name for the job as Deputy Undersecretary of State for administration, rumblings of opposition from Congressman John Brademas and Senator Paul Sarbanes—opposition reportedly on the basis of Carlucci's Nixon record—stopped the move. With his CIA confirmation hearings upon us, there is apparently no serious questioning of Carlucci's new appointment.

"Où est Carlucci?" Why he's gone to be Deputy Director of the CIA, Cyril. It's a long story from when you knew him. But then, come to think about it, it's not all that different from how you and your boys ran things in the Congo.

HUMAN RIGHTS IN ESTONIA

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. EILBERG. Mr. Speaker, February 24 will mark the 60th anniversary of the proclamation of the independence of the Republic of Estonia—one of the nations of Eastern Europe which now exists in captivity under the domination of the Soviet Union.

In connection with this forthcoming anniversary, I would like to share with my colleagues in the Congress a very moving appeal for human and national rights in Estonia, prepared by the Estonian American National Council.

APPEAL FOR RESTORATION OF INDEPENDENCE TO ESTONIA

On February 24, 1918, Estonia proclaimed her independence, establishing thereby the basis for the free and independent Republic of Estonia. On the 60th anniversary of that historic event, it is appropriate to recall certain facts about the Estonian people and their land.

Since time immemorial the Estonians have lived in their present geographic location on the east coast of the Baltic Sea. They belong to the Finno-Ugric race and speak their own language—Estonian—which is related to Finnish. The Estonians have no relationship to either the Slavic or Germanic peoples or their languages. Their strong sense of national untity and cultural distinction have carried them through all previous periods of foreign oppression and exploitation. In the latter part of the 19th century their national consciousness became a particularly forceful element which eventually led to the creation of the independent state of Estonia.

The establishment of the independent Republic of Estonia was possible only after the Soviet Red Army was driven from Estonia in the War of Liberation, which lasted from November 28, 1918, to February 2, 1920, when a peace treaty was signed at Tartu, Estonia, in which Soviet Russia renounced forever any claims to the territority of Estonia. There followed several other basic treaties between Estonia and the Soviet Union:

1. The Pact of Non-Aggression and Peaceful Settlement of Conflicts, dated May 4, 1932.

2. The Convention of Conciliation, dated June 16, 1932.

3. The Convention for Definition of Aggression, dated July 3, 1933.

The Soviet Union and Estonia were also parties to the Kellogg-Briand Pact on renunciation of war as an instrument of national policy signed at Paris August 27, 1928, which is still on the list of treaties in force.

In spite of these solemn treaty obligations, the Soviet Union, without any scruples, decided to liquidate the independence of Estonia as well as of Latvia and Lithuania. On August 23, 1939, Stalin and Hitler agreed to divide Eastern Europe. In the first stage, the Baltic States were forced to agree to the establishment of Soviet military and naval bases on their territories and about nine months later, Estonia, Latvia, and Lithuania were unilaterally declared Soviet republics and annexed to the Soviet Union.

To camouflage this takeover of an independent country, the Soviets staged so-called "elections," completely disregarding the Estonian constitution and election laws, and presented to this illegally elected body prepared resolutions about sovietization of the entire country. Finally a delegation of this body was ordered by the Soviets to be sent to Moscow to "request" the Kremlin to incorporate Estonia as a part of the USSR.

In the history of the world there has never been a country that would voluntarily renounce its own freedom and independence and submit itself to the overlordship of a foreign ruler. But that is exactly what the Kremlin is trying to tell the world, claiming that the Baltic States joined the Soviet Union voluntarily. How ridiculous such a claim sounds when we observe scores of nations emerging from colonial rule and insisting on their right to self-determination and independence.

As far as the people of Estonia are concerned, they have suffered incalculable human and material losses since the start of the Soviet occupation. Tens of thousands of Estonians from all walks of life have been deported to remote areas of the Soviet Union or liquidated by secret execution squads. All of the freedoms enjoyed by the citizens of Estonia under their own constitution have been abolished and the authority of the Soviet government and the secret police has become the rule of the land.

More than 75,000 Estonians have managed to flee from the Communist terror in their homeland and are now living in various parts of the free world. They are deeply concerned about the future of their ancestral homeland and they feel morally obligated to speak out on behalf of the people of Estonia.

Confirmed reports from Estonia show that Russianization of the country is proceeding with full force. Thousands of alien people are being brought in as "necessary workers" to mix with the local population. The Estonian language is being relentlessly pushed into secondary place. Communist literature and propaganda are trying to raise young Estonians as obedient servants of the Kremlin. However the Estonian nationalist spirit is fighting back everywhere. In the last few years there have been many occasions where the youth of Estonia has shown a strong national will of resistance through demonstrations and appeals to the free world. Many of them have been arrested and sentenced to hard labor as dissidents of the Soviet Union.

The Final Act signed in Helsinki declares that the inherent dignity and equal and inalienable rights of members of the human family lie at the foundation of freedom, justice, and peace in the world, and the right of self-determination for every nation is the goal of mankind.

Keeping these principles in mind, all freedom-loving Estonians are united in their determination for the restoration of the independence and national rights of Estonia. On the 60th anniversary of the proclamation of Estonian independence, all Estonians appeal to world public opinion to support them in this struggle for freedom and justice.

UPSTATE BULL FINDS FAME IN WEST

HON. EDWARD W. PATTISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. PATTISON of New York. Mr. Speaker, many people are under the mistaken impression that New York State is an asphalt jungle.

For the purpose of dispelling this myth that New York is a tangle of highways and industries, I am inserting into the RECORD a January 18, 1978, New York Times article about Patriot, the 1,620-pound bull that won top honors at this year's National Western Stock Show.

Patriot and his owner, Jerome Brody, are residents of Columbia County, which is part of my district.

Patriot is a tribute to agriculture in New York State, and living proof that the best, if not the biggest, bull is from New York.

The article follows:

UPSTATE BULL FINDS FAME IN WEST

(By Molly Ivins)

DENVER, January 17.—Here at the National Western Stock Show, the cattle breeders' Kentucky Derby, top honors for Black Angus have once again been taken by a New York owner and a New York bull.

In a scene normally dominated by men with Western twangs in ten-gallon hats and pointy-toed boots, breeders are getting used to having tassle-loafered New Yorkers walk off with the prizes. New York State is one of the major cattle-breeding areas in the country, particularly for Black Angus.

For the second consecutive year, the owner who took top honors in Black Angus was Jerome Brody, who is also the owner of Gallagher's Steak House on West 52d Street and of the Grand Central Oyster Bar. Mr. Brody, a 50-year-old Princeton graduate, has been in the cattle-breeding business only three years. In his role as restaurateur he regularly hobnobs with the likes of Jacqueline Onassis and Vanessa Redgrave.

His Gallagher's Angus Farm is near Ghent, N.Y., in Columbia County. Over the past 15

years, Columbia and Dutchess Counties in New York have produced more grand champion bulls than all the rest of the United States.

Mr. Brody's bull Patriot, born on the Fourth of July in 1976, has now won two-thirds of the breeders' Triple Crown. He won at the North American Livestock Exposition in Louisville, Ky., and here in Denver. He will be shown at the All-American Breeders Futurity next summer. Patriot is 1,620 pounds of prime beef, but there is no possibility he will ever wind up as steak at Gallagher's.

Patriot's victory here probably increased the value of his stud services by about a third, Mr. Brody said. Almost all registered breeding of cattle is now done by artificial insemination, and a healthy bull can provide about 6,000 services a year.

Mr. Brody refused to put a price on Patriot, saying, "Anything I say would probably be underpricing him, but I don't want to sound like a raving, proud owner, either." Most bulls sell for $1,500 to $2,000, but a champion may be worth several hundred thousand dollars. Patriot is an intermediate bull and is young enough to be shown again next year.

Mr. Brody also owned the supreme champion at last year's National Western Show, Manhattan Gal, a relatively dainty beast of 1,300 pounds. There are 76 head of Black Angus at Gallagher's Farm, and a new crop of calves is due shortly.

New York State's cattle business is almost entirely in the breeding end, not to produce meat for the table but to produce breeding cattle that will eventually improve the beast that does wind up on the table.

Mr. Brody said that for him and for other New Yorkers, cattle breeding was not just a gentlemanly hobby but a highly competitive business. "You try to have your own sales and to sell the progeny at higher and higher prices," he said. Mr. Brody is even trying to spread the Angus message in Europe. Last March, he showed Pioneer, a bull, at the Paris Agricultural Exhibition. It was the first time an Angus had been shown in France.

Mr. Brody and other New York cattle breeders are well known to the readers of such publications as the Angus Journal. But the idea of New York as a cattle state still seems incongruous to most people. But, as Jerome Brody is regularly proving on the cattle show circuit, you don't need the boots if you've got the bull.

RESPONSIBILITY FOR HEALTH

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. JACOBS. Mr. Speaker, would you believe:

RESPONSIBILITY FOR HEALTH

Most individuals do not worry about their health until they lose it. Uncertain attempts at healthy living may be thwarted by the temptations of a culture whose economy depends on high production and high consumption. Asceticism is reserved for hair-shirted clerics and constipated cranks, and every time one of them dies at the age of 50, the hedonist smiles, inhales deeply, and takes another drink.

Prevention of disease means forsaking the bad habits which many people enjoy—overeating, too much drinking, taking pills, staying up at night, engaging in promiscuous sex, driving too fast, and smoking cigarettes—or, put another way, it means doing things which require special effort—exercising regularly, improving nutrition, going to the dentist, practicing contraception, ensuring harmonious family life, submitting to screening examinations. The idea of individual responsibility flies in the face of American history, which has seen a people steadfastly sanctifying individual freedom while progressively narrowing it through the development of the beneficent state. On the one hand, social Darwinism maintains its hold on the American mind despite the best intentions of the neoliberals. Those who are not supine before the federal Leviathan proclaim the survival of the fittest. On the other, the idea of individual responsibility has given way to that of individual rights—or demands, to be guaranteed by government and delivered by public and private institutions. The cost of private excess is now a national, not an individual, responsibility. This is justified as individual freedom—but one man's freedom in health is another man's shackle in taxes and insurance premiums. I believe the idea of a "right" to health should be replaced by that of a moral obligation to preserve one's own health. The individual then has the "right" to expect help with information, accessible services of good quality, and minimal financial barriers. Meanwhile, the people have been led to believe that national health insurance, more doctors, and greater use of high-cost, hospital-based technologies will improve health. Unfortunately, none of them will.

The barriers to the assumption of responsibility for one's own health are lack of knowledge (implicating the inadequacies of formal education, the too-powerful force of advertising, and the informal systems of continuing education), lack of sufficient interest in and knowledge about what is preventable and the cost/benefit ratios of nationwide health programs (implicating the powerful interests in the health establishment, which could not be less interested, and calling for a much larger investment in fundamental and applied research), and a culture which has progressively eroded the idea of individual responsibility while stressing individual rights, the responsibility of society at large, and the steady growth of production and consumption ("We have met the enemy and he is us!").

The individual must realize that perpetuating the present system of high-cost, after-the-fact medicine will only result in higher costs and greater frustration. The next major advances in the health of the American people will be determined by what the individual is willing to do for himself and for society at large. If he is willing to follow reasonable rules for healthy living, he can extend his life and enhance his own and the nation's productivity. If he is willing to reassert his authority with his children, he can provide for their optimal mental and physical development. If he participates fully in private and public efforts to reduce the hazards of the environment, he can reduce the causes of premature death and disability. If he is unwilling to do these things, he should stop complaining about the rising costs of medical care and the disproportionate share of the gross national product that is consumed by health care. He can either remain the problem or become the solution to it; beneficent government cannot.

JOHN H. KNOWLES.

EDUCATION AND CHILDREN: PRIORITIES OUT OF FOCUS

HON. HERBERT E. HARRIS II

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. HARRIS. Mr. Speaker, approximately 2,300 years ago Plato told of the captured tribe that was chained in their captors' cave in a manner that they could see only the back wall of the cave. The captors kept a fire at the mouth of the cave and for a generation the captives could only view the shadows cast on the back wall of people passing in front of the cave. Plato tells us that when finally released, the former captives believed that shadows were reality and people were the reflection of shadows. We now have a generation that has grown up under the heavy influence of television. How "real" are the images they have watched on the television screen?

In preparing for a speech to the Delta Kappa Gamma Society, I asked my legislative assistant, Ms. Glenda Surovell, to gather information on television's apparent effect on our young people. She did more. Ms. Surovell prepared a statement that, in my opinion, is timely and thought provoking. I presented the statement on February 4 because I believed it to be worthwhile. I share it with my colleagues today for the same reason:

EDUCATION AND CHILDREN: PRIORITIES OUT OF FOCUS

I welcome this opportunity today to talk about the effect of television on children. Television, whether good or bad, is a fixture in American life today. It teaches us, it numbs us; it delights us, it saddens us. That box in our family room (there are now even televisions we can carry around in our pocket) is a pervasive and modern form of telecommunications we cannot afford to ignore.

What are the facts? Ninety-seven percent of all U.S. households have television sets. Nearly 45 percent of all homes have more than one. Seventy-seven percent of all home TV sets are color. Children average 25 hours and 38 minutes of viewing a week; teenagers average 22 hours and 36 minutes. Adult women watch 30 hours and 14 minutes a week and adult men consume 24 hours and 25 minutes a week. This is quite a dose from the screen.

One of my major concerns and yours is what is television doing to our children. To the young child, the television can be a teacher, a window on the world, a trusted companion. Children probably develop a trust of the "tube" because it is a familiar and stable part of their world. It can be a comfort too—monsters can instantly disappear. And they can begin to look at life ahead as an endless, exciting serial of fantasies and animation, with a few "Cocopuffs" thrown in for snacks.

I'm not sure we really know what television does to children. There have been many studies by universities and private groups and there have been extensive Congressional hearings on this subject in recent years.

One study reports that children who view television become desensitized to violence in real life, that "normal emotional responses to human suffering become blunted and this desensitization may easily cause not only major increases in our society of acts of personal aggression but also a growing attitude of indifference and nonconcern for the victims of real-life violence."

Another expert says, "The accumulation of evidence suggests . . . that children will copy TV violence; that they often do not do so because of parental control and lack of access to weapons; that TV teaches a child that violence often succeeds and that problems can be solved by violence; that viewing TV violence blunts sensitivity to violence in the real world; that children remember specific acts of violence, and that preferring violent television at an early age leads to more aggressive teenage behavior."

Another study says, it is "not that children learn how to commit violence on television, but that television conditions them to deal

with real people as if they were on a television screen."

There is no consensus about the effect of television and television violence on children. In fact, there is not even a consensus about what violence is. Is it, for example, a murder, robbery, or argument; is it a push or shove? What about accidental violence like a strike of lightning or an automobile collision? Is violence the slaughter of a herd of cattle in HUD? Is it the killing of Bambi's mother? Despite these disputes, data from CBS independent researchers indicates that during prime time, the level of violence on television was as high or higher in 1976–77 than it was in 1972. We do know that from 8 to 8:30 pm every night there are, on the average, 14.7 million children between the ages of 2 and 11 in the television audience. (This same study shows that the number decreases as the night wears on and that, incredibly, from 12:30 am to 1 am, there are still 1.1 million children watching television! Quite frankly, I don't know why those children aren't in bed, but maybe they are). We also know that the average American child will see 18,000 murders on TV by the time he or she graduates from high school, says the American Medical Association.

Well, those are some of the facts. Where do we lay the blame? The House subcommittee that held a hearing last year concluded, simply, "On everybody." Putting a "Kojak" or "Deputy Dawg" on the screen involves the production community, networks, their affiliates, and other broadcast licensees. Advertisers—companies peddling "Wheaties" and "Digel"—support these programs too. And finally, the consumers, you and me, sit there in front of the "boob tube" and soak it up. The age-old law of supply and demand is operative here too: if there were less of a demand for violent programs, the supply would correspondingly diminish.

With our children, one answer is simply to turn it off. As independent free human beings, we can always turn that knob. One Congressional witness even suggested that TV manufacturers be required to put locks on the sets so that parents could "lock out" these shows from their kids. One response to that was locking it up makes it even more inviting and kids would go next door or somehow find a way to see the shooting, knifing, bludgeoning or whatever.

Well, that is the tip of the iceberg of the problem. The question obviously begging is what do we do. And here again, the answers are not easy. Our Constitution says we must have freedom of the press and freedom of expression. And I think most of us believe in that principle. The Family Viewing Hour—an attempt at self-regulation by the industry—is probably a good step. But, lawyers tell us, TV is dominated by three giant corporations and this approach may involve antitrust problems. The Federal Trade Commission is now trying to determine if advertising that teases little appetites with an endless array of sugar-coated cereals contradicts Section 15 of the FTC Act which provides that advertising cannot be misleading. Section 5 of the FTC Act prohibits "unfair or deceptive acts or practices in or affecting commerce." Does children's television advertising, especially advertising for highly sugared products, violate this law?

There have been some suggestions other than locks, that is. Local affiliates could be given the opportunity to prescreen programs in advance of the broadcast date. We could establish a children's television network; it could operate within the framework of the public broadcasting service. A former FCC chairman suggested that licensees be required to broadcast a signal, such as a small white dot, in the corner of the television screen to indicate that the program about to be viewed contains material designed primarily for adult viewing.

What every study I've read concludes is that the public, especially parents, need to be educated. And this is where you, the educators come in. You can help. "The most direct approach (to solving the problem)," concluded the House subcommittee, "would be to refrain from viewing programs that are known to contain violent material. The effectiveness of this approach could be heightened if, at the same time, viewers made the broadcaster and advertisers aware of the cause of their dissatisfaction." After all, we don't have to watch "Hawaii Five-O." We don't have to buy "Skin Quencher" if its advertisements are paying for "Police Story."

We certainly have as a nation a commitment to provide opportunities for young children to develop into happy, healthy, contented human beings. I would hope that all of our national policies have kept this as a central goal. But I'm afraid we have not quite done that, and the problem of television programming and its effect on children is a perfect example. We have been asleep. We have let an industry grow erratically and monstrously without even thinking about what it is doing to us. This is not so unique. There are many anti-children policies. Let me name a few:

The 1979 federal budget that came over to Congress last month totaled $562 billion. In it there is only 4 cents for education out of every federal dollar.

We have spent $50,000 per person overseas to train people to operate an M–60 tank. We spend $70 in federal funds to give one handicapped child an education.

For the price of one atomic submarine (it was $158 million several years ago) we could provide a nutritious school lunch every day for 1,417,111 children.

The unit cost of one F–18 combat fighter, $15 million, equals what we put into education research—the budget of the National Institute of Education.

For the price of one C–5A transport plane, $47 million, we could construct and staff 10 community colleges for one year.

Of all the mothers of children under 18, 46 percent are working today. That means there are 28.2 million children with working mothers. Only 900,000 of those children receive any kind of child care supported by federal funds. We have never seriously come to grips with the latch-key child.

We have a National Board for the Promotion of Rifle Practice that costs us $233,000 a year. But we don't have a Department of Education.

We dole out $236 million a year for ship construction, $388 million for ship operations, plus another $100 million in tax subsidies to maritime industry. But the 1979 federal budget only has $60 million for adolescent health services and $52 million for maternal and child health.

Since 1937, the federal government has spent over $4.2 billion in price support loans to tobacco producers. This figure comes close to the $5 billion we have spent on cancer research and prevention since 1965. This to me seems like a very contradictory and expensive federal policy.

We give subsidies to the cotton industry, martini lunches, oil companies, sugar importers and believe it or not, even beekeepers. I say something is wrong when our priorities as a nation get that mixed up.

Our priorities are out of whack. I'm about ready to say we need a children impact statement every time we make a law. Do we really believe in life, liberty and the pursuit of happiness for our children? We have a Mother's Day and a Father's Day. Maybe we should have a Children's Day. The bumper sticker I see on the highways makes good sense: "Have You Hugged Your Child Today?"

The researchers I referred to earlier suggest to us that television "blunts" and "desensitizes" children, that it encourages attitudes of "indifference" and "unconcern," that they are encouraged to "turn people off" as though they are turning off the television set. Is this what we want? Is this what our national policies ought to encourage, if not directly by neglect?

My message to you today is that we have to get serious about education, you and I. In the Congress, I vote for every education bill. No one can tell me education is too costly. I fight cuts in education spending. Just this week, I received my "children's rating" and I am pleased to say it is 100%. I wish it would be 500%.

Alfred North Whitehead has put it well: "When one considers in its length and breadth the importance of this question of the education of a nation's young, the broken lives, the defeated hopes, the national failures, which result from the frivolous inertia with which it is treated, it is difficult to restrain within oneself a savage rage." I say, "Let's do something about it." I say, "Let's have a little savage rage." Let's all turn into "lionesses." They're our "cubs."

AMBASSADOR LODGE ON THE PANAMA CANAL

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. SARASIN. Mr. Speaker, a great friend and statesman, Ambassador John Davis Lodge, has asked me to place the following article in the CONGRESSIONAL RECORD. The article appeared in the New York Times on November 29, 1977, and is authorized by Ambassador Lodge, I believe my colleagues will find the article of great interest:

[From the New York Times, Nov. 29, 1977]

THE CANAL: A RAMPART

(By John Davis Lodge)

WESTPORT, CONN.—The principal arguments vehemently raised in support of the Panama Canal treaties are not altogether convincing.

It is alleged in screeching tones that we stole it. That is contrary to the record. It was an act of constructive statesmanship by one of our great Presidents, Theodore Roosevelt. It constitutes a notable public service by the United States to the entire world. We should not be apologetic but proud of this unprecedented engineering achievement. We succeeded where the French failed. But for us, the Panama Canal would not exist. In one way or another it has been paid for by us many times over.

Should we now say that the Louisiana Purchase, by which President Thomas Jefferson bought one-third of the United States from Napoleon for $15 million, was a steal and that therefore we should return this vast area to France? And how about Alaska? And Hawaii?

It is asserted that the Panama Canal constitutes an anachronistic vestige of colonialism in a decolonializing world. Certainly the British, French, Spaniards and Portuguese have been shedding their colonies. But how about the Russians and their satellites? Are these satellites not in effect colonies?

Moreover, the Panama Canal Zone is not a colony. It is inhabited by many thousands of Americans. True, it is not contiguous to the United States, as it is to Panama. Is contiguity then the criterion? Well then, how about Alaska, contiguous to Canada and close to Siberia. Should we hand Alaska over to Canada or perhaps to Russia? Alaska is a state as is Hawaii. Yes—and we could con-

ceivably make a state out of the Panama Canal Zone.

It is declared that the Latin Americans resent the North American presence in the Canal Zone. Yet there are many others who fear Russian control of the canal by means of their control of Fidel Castro's Cuba and Castro's power and influence over Gen. Omar Torrijos Herrera, the current, temporary, unelected, left-wing, military dictator on Panama. And there are many others around the world who fear that the Panamanians, in spite of their threats and promises, will not run the canal as efficiently as we do. We run it very well indeed.

Argentina, Brazil, Chile, Bolivia, Uruguay, Paraguay and Ecuador have anti-Communist Governments and fear Communist infiltration of the Canal Zone. Many in these countries would dread our relinquishing control of it.

The principal argument advanced in favor of the treaties is that, as General Torrijos has warned us, if they are not ratified by the Senate there will be trouble in Panama—demonstrations, riots, bombs, guerrilla activity—and that therefore we must agree to the treaties as an act of appeasement—a mini-Munich, if you will—but, in effect, a shotgun arrangement.

We got tired of the Vietnam War, we refused to help in Angola, and so now it is proposed that 217 million Americans should cave in and run away before the ominous threat of 1.5 million people in Panama. This is the worst possible reason for ratification of the treaties, for it portrays us Americans as a supine pack of cowards, a paper tiger who will give in at the slightest threat of combat. It is succumbing to blackmail.

This is the argument that would cause us to lose face and friends and confidence in many parts of the world, particularly in South America, where our sanctimonious sermonizing about human rights has made us unpopular.

Certainly the treaties can properly be revised. However, let us recognize that in the normal struggle in which we are inextricably involved, for the United States to surrender control of the canal will, in this jungle world, present the enemy with an advantage. While in some ways the canal may be obsolete, in unfriendly hands it could present a difficult and dangerous problem for the United States, especially in the event of a showdown.

The overriding question is this: Is it in the interests of our national security, is it in the interest of the United States as leader of the non-Communist world to lessen our control of this vital waterway and rampart at a time when Russian imperialism, heavily and increasingly armed, is very much on the march? The national interest must be the determining factor. We should be governed by geological considerations. If we move out, will the enemy eventually move in?

SHORELINE EROSION

HON. PHILIP E. RUPPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. RUPPE. Mr. Speaker, with the support of several of my colleagues, I am today reintroducing the shoreline erosion management bill, H.R. 10015, that I earlier introduced on November 1.

After introducing H.R. 10015, I requested and received comments on this legislation from numerous State and Federal agencies concerned about the shoreline erosion problem on the Great Lakes. I am pleased that the comments I have received have been quite positive, having reviewed responses from Michigan, Ohio. Illinois, New York, as well as Federal agency comments. I am pleased that the bill I am introducing today has necessitated only minor modifications in light of these comments.

It is time that the Federal Government live up to its responsibilities in the Great Lakes area. After all, its control of water levels on the lakes at Niagara Falls and Sault Ste. Marie under the authority of the International Joint Commission and its involvement in the winter navigation program and interstate commerce on the lakes have been significant contributing factors to the shoreline erosion problems.

The approach established under this bill—a Federal, State, private partnership—is a major turning point in controlling the accelerated erosion process that is eating away at this magnificent fresh-water shoreline resource. Previous efforts to control this process have excluded the private property owners from participation, despite the fact that 70 percent of the critically eroding areas and 82 percent of the entire shoreline is privately owned. Now, by providing a low interest loan program for private property owners to be administered by the State and providing for State-Federal grants for eroding public property, we will be marshaling our resources in a cooperative endeavor to preserve this coastal resource for future generations.

It is my hope that this legislation will serve as the major vehicle for reversing the destructive erosion forces on the Great Lakes.

COMMUNITY EDUCATION

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. LEHMAN. Mr. Speaker, Congress will soon be considering the reauthorization of the community education program. Community schools have been a great success in Dade County and have generated a high degree of public enthusiasm.

In order to make my colleagues more aware of the potential of community education programs, I would like to share with them this editorial from the Miami Herald. The editorial is as follows:

COMMUNITY SCHOOL PROGRAM SCORES AN "A" ON ALL COUNTS

Top school administrators and a group of citizens gathered for lunch the other day to give new impetus to an old program, community schools. They advocate a proposal that almost anyone would agree makes sense: keeping the schools open during non-school hours for use by the community.

From a fiscal standpoint, this is appealing. Publicly financed buildings, playgrounds, libraries, auditoriums, and other facilities should be used for as many public functions as possible. Why should the gate to the school playground be locked at 3 o'clock, requiring neighborhood children to play in the street? Why should a community have to build an activities center when there is a nearby school that is closed more than it is open?

This is the situation with all but 57 of Dade County schools. Yet the county participates more fully in community schools than most places in the nation. It pioneered the program years ago.

Local supporters soon learned that despite its seeming simplicity, the program is fraught with obstacles. The greatest is the most obvious: reluctance of the school administrators to share their turf with outsiders. Basically the struggle is over sharing not buildings and playgrounds, but power.

Dade County School Superintendent J. L. Jones concedes as much. He is a strong supporter of the community-school concept. But like most other educators, he views it in much broader terms than most citizen advocates.

The latter are concerned primarily with better utilization of school facilities and programs in meeting community needs. But the educators see the community schools as a vehicle for gaining community control of the educational system.

In a way, each side perhaps is focused on the same object, but from opposite ends of the telescope.

While appearing to sympathize to some extent with the educators, Dr. Jones has decided, wisely, we think, that the best course is to let the citizens in, both in the buildings and in some of the decision-making. Though not persuaded that this will lead to better learning, he argues that participation is an "end in itself" because "it makes new resources available to the schools."

That is an interesting approach, considering that the aim of community schools is to bring more school resources to the community. If the reverse also occurs, and the schools get more resources from the community, then so much the better. It is not often, in the school system or anywhere else, that a program comes along whose benefits are so well balanced.

LITHUANIA'S INDEPENDENCE

HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Ms. MIKULSKI. Mr. Speaker, February 16 is a day of great importance for individuals of Lithuanian origin because this day commemorates the 60th anniversary of the restoration of the Republic of Luithuania. The proud citizens of this Baltic republic fought bravely for their independence, but in 1940 the Soviet Union, an ally of Nazi Germany at the time, seized and occupied all Lithuanian territory. At the end of World War II, the Soviets refused to restore the independence of the Baltic States.

Since that time the citizens of Lithuania have been under foreign rule. The domination of this people by the Soviet Union is a flagrant denial of the principle of national self-determination. Those Lithuanians who have not been able to escape from their homeland have been subjected to political repression, religious persecution, and a denial of their human rights.

I am a cosponsor of a concurrent resolution in the House introduced by Representative DORNAN which, expressing the sense of Congress, encourages the self-determination of the captive nations of Lithuania, Estonia, and Latvia. I was pleased to learn that in recent weeks representatives of these captive nations have visited Belgrade to appeal

to the conference on behalf of their countrymen under Soviet occupation.

To the Lithuanian people I express my continuing sentiments of support on this 60th anniversary celebration of independence. It is my hope that they may soon recover their homeland so that the next independence day will be celebrated in a free Lithuania.

THE COMMUNICATIONS ACT

HON. CHARLES ROSE III

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. ROSE. Mr. Speaker, the Communications Subcommittee of the Committee on Interstate and Foreign Commerce is engaged in highly important work—preparing legislation to give the Nation a modern communications law.

Under its distinguished chairman, the Honorable LIONEL VAN DEERLIN, the subcommittee will be bringing before this House a bill that could have a greater impact on the lifestyles of our citizens than that of the railroad legislation of the last century.

Mr. VAN DEERLIN, who was a radio and television news director in his home city of San Diego before coming to Congress, has written a perceptive article about the problem and the potential of rewriting the Communications Act of 1934. I commend this article, which appeared in Sunday's New York Times, to my colleagues:

BROADCASTING NEEDS A NEW ACT TO FOLLOW

(By Lionel Van Deelin)

Congress has a job to do. It ought to rewrite—and significantly update—the Communications Act of 1934. Believe it or not, what we see on television today is regulated by a 44-year-old law. When written, the law was intended to regulate broadcasting "in the public interest, convenience and necessity," whatever those words may have meant in 1934. Your telephone system, too, operates under this law—which mentioned only radio and wire communication. The Act antedated television, coaxial cable, satellites, direct microwave beams, laser beams, fiber optics and a host of other technologies which may change the lives of Americans as sweepingly as the Industrial Revolution. The authors of the Act could not anticipate the manner in which three networks would come to dominate broadcasting. Their key aim had been *localism*. Assignment of frequencies was supposed to tailor broadcasting service to the needs of individual communities.

The Act hasn't worked that way. It has, in fact, done almost the opposite. Today, in the face of F.C.C. rules intended to limit multiple station ownership in the 50 top markets, the following is true:

Each of the three networks owns five of the most profitable TV station licenses in the nation. (Their 15 outlets, which are one-fiftieth of U.S. commercial stations, yield one-fifth of the total earnings.)

In addition to their own stations, the networks provide more than 80 percent of each day's total programming on 585 other commercial outlets. Three out of four TV stations are licensed to, or affiliated with, the networks.

Finally, the bulk of programming on nonnetwork independent stations is mostly syndicated re-runs of network hits from earlier years.

It's not hard to understand why things have worked out this way. It takes money to produce quality programming; even a prosperous local broadcaster could not maintain the volume of entertainment or the breadth of news coverage produced for the wider total audience served by networks. But the flood of new transmission techniques sends a clear message: Wider programming choices are within our economic reach.

Too often, those choices have been denied the consumer or needlessly delayed by slow F.C.C. authorization. FM radio, with its superior ability and spectrum of space for hundreds of new stations, waited more than two decades for licensing. The reason? Its introduction threatened a major company's then-dominant place in communications manufacturing.

Pay TV—the option of watching programs without commercial interruption, for a fee—was long denied American householders first by a five-and-a-half year freeze by government regulators on all cable development and then, in 1972, by the imposition of rules by the F.C.C. which the courts later found to be arbitrary and capricious.

Now a bipartisan group in Congress is determined to forge a new Act, one more attuned to the times. We hope to establish a House position by year's end, and send a bill to the Senate early in the next Congress.

The consumer will benefit from a new law. The explosion in communications holds promise of vastly expanded services at ever decreasing costs. Old systems and new are coming together. Through home telephone service either cable or optical fiber can provide 30 to 60 new television channels. "Solid state" techniques and miniaturization have brought computers within reach of every home. The cable giant, Teleprompter, is already linking up New York's banks and may next put the equivalent of a teller's window into the lobbies of apartment houses—without the teller. Warner Cable is serving the west side of Columbus, Ohio, with a two-way TV system that extends the classroom into everyone's living room, and permits football fans to second-guess Woody Hayes by voting with a dial on their TV set for their optional play choice during a time-out. Our Postal Service needn't worry much longer about rain, sleet or the gloom of night—letters can move electronically long distance and need be hand delivered only within a city, just as telegrams go by wire from town to town and are then delivered as 'mailgrams' to the addressee.

Something called "video retrieval" is just around the corner: If tonight's TV log lists nothing tempting, one will be able to dial an old program or movie—or a replay of last night's hockey game. The demand for these kinds of options is demonstrated by the success of the home video tape recorder which was a pre-Christmas sellout in many department stores (at under $1,000, and falling). With one of these devices, the viewer can record for later replay a program he is watching, or a program other than the one he is watching—or he can set the device to record a program when he is not home. He can even rent tape cassettes and videodisks of programming unavailable on the air.

Network broadcasters are understandably nervous about what negative ramifications an updated Communications Act might hold for them. They recall a startling forecast by the communications advisers to President Ford: that the decade of the 1980's might see cables and satellites ending the need for conventional present-day networks. The long-throttled competitor, pay TV, is suddenly enjoying a boom. The owner of a local UHF station in Atlanta uses a combination of satellite and cable transmission to compete for audiences around the country. Hollywood talks of beaming new films via commercial satellite straight to local stations, bypassing the networks. Japanese broadcasters are now testing the transmission of satellite programming direct to home receivers, via rooftop antennas. Sophisticated telephone terminals still in the laboratory could significantly broaden the choice of news and entertainment flowing into the average home. Cassetes, videodiscs and the new 'electronic games" all challenge the broadcasters' domination of our home screens.

In a time of record profits (annual income $8.1 billion and growing) the broadcast industry feels embattled as never before. Yet rather than moving to equip itself for a new environment, the industry chooses to draw its wagons into a circle around the hopelessly outdated Communications Act of 1934.

Perhaps, as most commercial broadcasters insist, the nation's tastes *are* adequately served by a nightly diet of comedy, police shows and pap. If so, such fare will withstand the test of competition—and broadcasters can continue to enjoy a healthy return on investment without the protection of tight government regulation.

But the task of Congress is to match the Communications Act with the times; to make certain it serves the consuming public, and not just the varied industrial or business interests involved. Americans should be able to enjoy the full fruits of American ingenuity—the right to choose from the widest range of sources for their entertainment and—more important—their enrichment.

DAY REACHES HIS GOALS

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. JACOBS. Mr. Speaker, just in case nobody believes there are Horatio Algers any more, I insert the column written by Thomas R. Keating in the Indianapolis Star on February 2, 1978—a good story about a good life:

DAY REACHES HIS GOALS

(By Thomas R. Keating)

Now that John Day is a state legislator, he doesn't have to hitchhike anymore or fret about how to buy his next meal or pay the rent.

Most of all he doesn't have to worry anymore about whether he has what it takes to reach his goals

A lot of people will tell you how they came up the hard way, but very few have been along the route John Day took.

John grew up in Holy Cross parish on the near Eastside. His parents were divorced when he was young and when he was graduated from Cathedral High School in 1956, he was on his own.

He rented a tiny apartment at 13th and Pennsylvania streets, got a federal loan to attend Marian College and set out to work.

He had to drop out a couple of times to deliver whiskey and work at a hospital and a variety of other places when he needed money. Sometimes he worked nights and went to school days. Other times he worked days and went to school nights.

He did this for six years while living alone on a budget of $2 a day.

He had no car, not what you would call an active social life and no one to turn to for an extra $10 or $20 to tide him over. He ate a lot of peanut butter and jelly sandwiches and often just didn't eat for a day or so. He hitchhiked to Marian and back for all his classes.

You would see him occasionally in those days, usually talking about an interest in politics that was fired by listening one night in 1959 to a speech given by a U.S. Senator named John Kennedy.

He always looked a little hungry then, a little nervous and a little overworked, but never even a little sorry for himself.

When his first goal, college graduation, was reached, Day got a job teaching at Roncalli High School and another government loan to attend graduate school at Indiana University. In less than three years, he had a master's degree in government and went to work in the probation department at Marion County Juvenile Court.

About this time, he also started work on another goal. He used to tell fellow students at Marian that someday he was going to help develop legislation to help people.

In 1968, Day ran for a seat in the legislature, won in the Democratic primary and lost in the general election. In 1970, he ran for a seat in the legislature, won in the primary and lost in the general election. In 1972, he ran for a seat in the legislature from the newly created 45th district and this time, lost in the primary.

You may be getting the idea he doesn't give up easily.

In 1974, he was elected to the legislature from District 45 and again in 1976.

District 45 is roughly bounded by 38th Street on the North, Keystone Avenue on the East, Fountain Square on the South and Harding Street on the West.

It is a district in which about 75 percent of the voters are black. Everyone ever elected to the General Assembly from the district has been black—except Day.

Unlike many men who come from less than modest beginnings and, when they become successful make a creed out of believing that there is no reason anyone who is poor cannot do the same thing. Day has devoted his time to legislation that would benefit the boy he once was rather than the men of power he has come to know.

On his first day in the legislature back in 1975, Day was sworn in and then waited all of about two minutes before introducing a bill called the Uniform Residential Landlord Act.

It is a bill that spells out the rights of tenants and landlords and, among other things, allows a tenant to break a lease if health and safety standards are not maintained.

Day set about working for the bill's passage with the doggedness that is by now as ingrained into his personality as the nervous intensity that marks even his relaxed moments.

In 1975, the bill was defeated in the house by a margin of 43 to 42. Day called all the representatives who voted nay and turned many of them around. On a second vote, the bill passed 53 to 25 with 20 abstentions. It then went to the senate and died.

In 1976, the bill was voted down in the house, 47 to 45.

In 1977, Day picked up a co-sponsor in the senate, Republican Speaker Pro-Tem John Thomas from Brazil. When the senate deadlocked, 25 to 25, however, Lt. Gov. Robert Orr broke the tie with a no vote and the bill expired again.

This session of the General Assembly, the senate version of the legislation finally passed, 23 to 21. The house will most likely vote on the bill within two weeks.

It should pass but if it doesn't, it will some day. With Day's record for persistance, it's almost a sure thing.

SALUTE TO FEDERAL PAPERWORK COMMISSION

HON. JAMES R. JONES

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. JONES of Oklahoma. Mr. Speaker, almost daily we are reminded in the press of some Government cost overrun, a new bureaucratic nightmare, or another ineffective effort to deal with a problem. Little notice is given, however, when one small part of the Government functions exactly as it was designed.

Yet this very happening occurred last week when the Commission on Federal Paperwork, chaired by Congressman FRANK HORTON, terminated its work. Not only did this Commission complete its work on schedule, but it returned $1.25 million in unspent funds to the Federal Treasury. The Commission made approximately 810 recommendations on ways to reduce paperwork of which 60 percent were acted upon by Congress. There is an estimated $3.5 billion in first year savings as a result of the recommendations already being implemented, and an estimated first year savings of $10 billion if all recommendations are put into effect.

Thus I believe the news of such a successful endeavor by a Federal Commission should be made more available to the American public. Too often the public is exposed to Government endeavors which are unsuccessful. It is good to publicize when the Government does something effectively and efficiently.

"EUBIE" BLAKE BEGINS HIS 95TH YEAR

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. CONYERS. Mr. Speaker, today, February 7, is the 95th birthday of James Hubert "Eubie" Blake, one of America's greatest musical artists and composers. A creator of ragtime and Broadway musicals, he has become a legend in his time.

Eubie Blake was born in Baltimore in 1883, the last of 11 children and the only one to survive past infancy. His parents were once slaves. He learned his musical skills outside of school, joining a singing quartet at age 12, a vaudeville show at 15, and composed his first song, "The Charleston Rag," in his 16th year. Despite the limited opportunities to study music and difficult circumstances—for two decades he survived by performing in every manner of nightclubs, and even on the back of a horse-drawn wagon—Eubie played his music and composed his songs until they became the classics of the day.

In 1915 Eubie launched a new career in Broadway musicals by teaming up with Noble Sissle, his lifelong friend and partner. Along with the comedy team, Miller and Lyles, they created a series of all-black Broadway musicals that inspired a whole new generation of jazz artists and audiences alike. Its enormous success was followed by several other musical scores and memorable songs such as "Memories of You."

Eubie Blake symbolizes the greatness of jazz and its standing among audiences throughout the world as the classical music of America. At 95 Eubie Blake continues to delight musical audiences, for which we are all immensely grateful.

TRIBUTE TO JOHN CRAMER

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. UDALL. Mr. Speaker, not long ago, I introduced a "whistleblower's bill" to protect Government workers who report on things and people that go wrong in the Federal bureaucracy.

Learning of the semiretirement of John Cramer, it occurred to me that he probably was one of the alltime whistleblowers in this city, a man who whistled from a bully pulpit, a column that began in the old Washington Daily News and continued in the Washington Star.

John deserves recognition as one of the best journalists in Washington. For nearly 40 years, he has represented the best in journalism—a reporter with a deep pride in his craft who was fair, careful, and diligent with facts, fearless, and with a deep, human side.

He did not just blow whistles. John knew that the great majority of Federal employees are topnotch, reliable, conscientious people, and he wrote about their point of view, and about their problems.

In journalism, a reporter who gains respect from the opposition has hit one of the high marks of the business. John recently was the subject of such a tribute, in the form of a column written by Mike Causey of the Washington Post.

I include Mr. Causey's column in the CONGRESSIONAL RECORD. It is worth reading, because John Cramer is worth remembering.

[From the Washington Post]

"GODSPEED" TO RESPECTED RIVAL

(By Mike Causey)

After spending 36 years slaving over a hot typewriter (and loving every minute of it), John Cramer, The Washington Star's popular federal columnist is going into semi-retirement.

John's long career (begun with the old Washington Daily News in 1941) covers a lot of ground. He leaves a trail of delightful writing, top investigative reporting, and a legion of sadder but wiser federal officials who felt his wrath. And lots of friends and admiers. He's the dean of the crew of writers who cover government workers. John did it longer, and better than most.

For lots of people in and out of government it is sad that John is pulling the plug. The good news, however, is that he will write a column every Sunday in The Star. His colleague, Joseph Young, will do the Federal Column Tuesday through Saturday.

Cramer titled against the federal windmill in his lively column in the old Daily News until it merged with the Star in 1972. Crooked, dumb or pompous federal officials would tremble, as they opened the tabloid to page 2, where John always called it the way he saw it. Often the Daily News would make it easier with a banner headline to find his column.

John was usually for the underdog, and always for good government. He is credited with killing off a number of plans and legislative proposals that would have hurt government workers, or given undue benefits to officials.

At least two pieces of legislation dealing with the civil service are unofficially called

"The Cramer Act" and "The Cramer Amendment" because he pushed them into law. President Johnson once invited him to the White House for the signing of a "Cramer" law, along with the members of Congress who agreed that John had done more than the rest of them put together.

A major news magazine once decided to do a feature on Cramer. They wanted to find out what made the popular, and durable, columnist tick. A researcher asked what his philosophy was How he could cover the government daily for so long and maintain his sanity.

Cramer is said to have told them something like: "My philosophy is that the U.S. government is made up of some awfully good—people who are under some dreadfully bad management." Regular readers of the column know he never strayed from that philosophy, protecting the little people and deflating the big ones.

"John Cramer gave me a harder time than anybody in this town," said a top General Services Administration official. "He would tear a piece out of my hide regularly. But nobody was more honest, or fair." That kind of comment keeps cropping up when friend and foe talk about John Cramer.

Despite our rivalry, John and I did collaborate on a research project in the mid-1960s. It lasted for several years. The place was a 14th street NW restaurant called the Dolphin, located almost exactly between the Post and the News buildings. The original building, unmarked by any plaque to our research, remains.

The purpose of our studies was to determine the effects of certain selected distilled beverages on the brains of two Americans of Irish descent. We did it without compensation and today ask no praise for whatever humble contribution to science we might have made.

One day, John arrived early. He was several test tubes ahead of me.

A woman came into the restaurant. She walked over to the table, littered with olives, onions, lemon rinds and paraphernalia for stirring liquids. She stopped, studied John for a moment and said:

"Pardon me, aren't you John Cramer?"

(In those days, the Daily News ran a drawing of John's profile with his column.)

"Yes ma'am," John said.

"You look exactly like your picture in the newspaper," she said.

"I know," Cramer replied. "I'm sorry."

Actually, there is no need for John to be sorry, during his 36-year war and love affair with the bureaucracy. He did nice work.

FRANK BROPHY, OUTSTANDING CITIZEN

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1978

Mr. RHODES. Mr. Speaker, I would like to join my colleague in paying respects to Frank Brophy, who was a well-loved and respected citizen of our State, and a warm personal friend of mine.

Frank Brophy was a descendant of a family that pioneered banking in Arizona during the early copper mining days, founding banks at Bisbee and Douglas. From the time when Arizona had little but sunshine, sagebrush, and scattered settlements, the Brophys have been in the forefront of the banking industry that financed its growth. Frank was chairman of the board of Douglas Bank and active in Valley Bank, both institutions that have financed a wide range of economic development projects.

He was a writer, a rancher, and a firm and ardent supporter of States rights. He introduced pedigreed citrus and helped develop Sphinx dates. He participated in many civic activities, raised purebred cattle and fine horses, and was a director of the Arizona National Livestock Show, chairman of the Arizona Racing Commission, and a member of the State Fair Commission.

Frank Brophy was a colorful individual, a man of vision and vociferous enthusiasm for Arizona and the free enterprise system. I extend my condolences to his family, and feel a heavy sense of personal loss in his passing.

A NEW WATCHDOG TO KEEP WATCH ON THE OLD WATCHDOGS?

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. HYDE. Mr. Speaker, at the risk of incurring the wrath of consumer activists, and with the absolute certainty that I will be accused of being anticonsumer and probusiness, I vigorously oppose the creation of a "super" agency whose main purpose would be to represent the interests of consumers (as interpreted by this new elite) in Federal agency proceedings.

Proponents of this legislation contend that this new agency is necessary because existing agencies are not doing their job. The logic seems to be that we need a new watchdog to keep watch on the old watchdogs.

There are many things wrong with H.R. 9718, the Consumer Representation and Reorganization Act of 1977, the first of which is the autocratic manner in which it is being forced upon us, and in turn, the American people. This is only the latest example of numerous attempts to ram bad legislation down our throats.

H.R. 9718 has never been before committee, and cannot even be considered a committee substitute. The original legislation survived the Government Operations Committee by a one-vote margin, hardy indicative of strong committee support.

Nevertheless, the Democratic leadership, under mounting pressure from the White House to help Jimmy Carter keep a campaign promise, declared that the House would consider the newest version of the bill on February 7, and here we are.

The administration claims this measure will "reorganize certain consumer programs." They fail to point out that a single Executive order could consolidate all existing consumer agencies into one.

The new Office of Consumer Representation will have the authority to intervene in nearly every agency proceeding, and would place the full weight and power of the executive branch against the respondent, adding a huge array of powers already given existing agencies: A second prosecutor, free to intervene, investigate, depose, subpena, interrogate, examine, cross-examine.

Consumer advocates claim that an Office of Consumer Representation will have no difficulty in determining just what is in the consumer's interest. Which consumer? We are all consumers, with differing points of view.

The last time certain consumers insisted on mandatory seatbelts. Congress gave them what they wanted. The result: Congress was deluged with angry mail and rescinded the law, but not before it had cost consumers $2.4 billion extra for their new cars.

Which consumers will the new agency represent, those who agree with Ralph Nader on every issue? The environmentalist? The conservationist? The taxpayer? The poor? The middle class? The homeowner? The renter? The large family? The elderly? Obviously there is no one point of view for the consumer.

Which consumers would the new agency have represented in the recent FDA ban on saccharin?

What about the dozens of new statutes already on the books, from the Hazardous Substances Act to the Fair Labeling and Packaging Act, from the National Traffic and Motor Vehicle Safety Act to the Consumer Goods Pricing Act?

The American people do not want another new agency; they want less Government interference in their lives. They want President Carter to keep his campaign promise to streamline the Federal Government and reduce the size of the bureaucracy, not create more.

Congress ought to exercise tough oversight over those agencies which already exist to protect the public interest rather than create a new one.

LEGISLATING RESPONSIBLY: LIMITING LEGISLATION ON APPROPRIATIONS BILLS

HON. HERBERT E. HARRIS II

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. HARRIS. Mr. Speaker, today I am introducing a resolution to limit legislation in appropriations bills and I am pleased that 26 Members of the House have joined me by cosponsoring this measure.

The separation of legislation and appropriations is a fundamental principle of constitutional government, from which derives our authorizations-appropriations process and the jurisdictional structure of our committees. However, the House has compromised this principle in several ways over the years.

Basically, my resolution, first, prohibits limitation amendments, which are conditions on spending that are allowed through practice in the House; and second, deletes the "Holman rule," which

has permitted certain changes in existing laws in appropriations bills. The text of my resolution, the history of the current rule, and my reasons for introducing this measure appeared in the CONGRESSIONAL RECORD on January 19 on page 125.

It is my belief that our authorizing committees can and should handle policy question thoroughly and deliberatively. Appropriations bills should be money measures for purposes authorized in law. They should not become "issue Christmas trees."

The following Members of the House are cosponsors of this resolution. I look forward to additional Members joining this bipartisan group:

LIST OF COSPONSORS

Mr. Brodhead, Mr. Buchanan, Mr. Carr, Mr. Cotter, Mr. Danielson, Mr. Edwards of California, Mrs. Fenwick, Mr. Fithian, Mr. Krebs, Mr. Mann, Mrs. Meyner, Ms. Mikulski, and Mr. Miller of California.

Mr. Moss, Mr. Ottinger, Mr. Patterson of California, Mr. Pattison of New York, Mr. Rose, Mr. Runnels, Mr. Ryan, Mr. Solarz, Mrs. Spellman, Mr. Stokes, Mr. Weaver, Mr. Whitley, and Mr. Zablocki.

CONGRESSMAN BEVILL'S LETTER TO THE PRESIDENT ON ADMINISTRATION NUCLEAR POLICIES

HON. MIKE McCORMACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. McCORMACK. Mr. Speaker, on January 25, the Honorable TOM BEVILL, chairman of the Public Works Subcommittee of the Committee on Appropriations, wrote to the President relating the impressions Congressman BEVILL had received during his recent trip to Europe. Congressman BEVILL visited the heads of the energy agencies of the Western European nations, met with the leaders of the International Atomic Energy Agency, and toured the French liquid metal fast breeder demonstration project.

Congressman BEVILL's impressions, as he related them in his letter to the President, provide an important message for all Americans, and constitute an important contribution to our thinking of one of the most significant aspects of a responsible national energy program. I am, with his permission, inserting a copy of Congressman BEVILL's letter to the President at this point into the RECORD:

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Partly because of the growing controversy between the Administration and the Congress with respect to the pace and direction of the nuclear power program, I have been looking more deeply into nuclear energy issues nationally and internationally.

Recently, I had an opportunity to visit with the Director General of the International Atomic Energy Agency, the Executive Director of the International Energy Agency, and energy officials in the Republic of Spain. I also visited the French East Breeder Reactor Demonstration project (Phoenix) and the nuclear waste vitrification facilities at Marcoule. Members of my Subcommittee staff visited similar nuclear facilities in the United Kingdom.

I found great concern that the U.S. is abandoning its position as the world leader in peaceful nuclear technology by its decisions to defer indefinitely reprocessing of nuclear fuel and delay development of the liquid metal fast breeder reactor. It seems that most nations of the world have had great confidence in the breadth and depth of the U.S. nuclear programs. They believed that our intense concern for nuclear safety and critical licensing processes could be depended upon to provide safe nuclear energy options for those nations that do not have our energy reserves, nor capital resources to invest in nuclear development. Now, there is great uncertainty as to our policy and intentions, and suspicion that our International Fuel Cycle Evaluation initiative masks an arbitrary decision by the Administration to limit development and use of nuclear power for energy purposes.

All of our contacts supported U.S. objectives of preventing further nuclear weapons proliferation and assuring adequate nuclear safeguards. But we found no responsible official at the technical level who believes we should defer reprocessing of light water reactor fuels or delay development of the uranium-plutonium cycle liquid metal fast breeder reactor because of proliferation or safeguards concerns. All seemed to think that with appropriate national and international agreements, present programs can be adequately safeguarded, and that the world needs for energy dictate aggressive development of nuclear energy capabilities, particularly a viable breeder reactor.

We found almost universal surprise and amazement at U.S. proposals to reexamine technologies previously rejected in favor of the LMFBR option since this seems unwarranted on any technical grounds.

Partly because of concern over U.S. policy, Spain, for example, has decided to order four large nuclear power plants from a non-U.S. supplier and to buy nuclear fuel from Russia. They have contracted with Britain and France for reprocessing. Such decisions aggravate our unfavorable trade balances and further weaken our position of leadership in nuclear matters.

IEA world energy projections indicate that other nations need to turn to a more permanent source of energy, such as fast breeder reactors, well before the turn of the century. Russia, France and Britain each have already developed and operated 250 MWe fast reactor prototypes comparable to our Clinch River project and have shown great progress in liquid metal technology. They are moving aggressively to reprocess present fuels and have demonstrated technology to reprocess fast reactor fuels. Their waste management programs seem comprehensive and adequately designed to deal with problems of nuclear wastes. These countries are already at work on commercial size breeder reactors.

In the U.S. it would seem sensible to move to more permanent energy sources at an early date to conserve our exhaustible fuels. Also, there is growing concern over the potential environmental consequences of greatly increased use of depletable resources for energy needs.

The Administration's 1979 budget calls for "a strong but reduced base technology for the the liquid metal fast breeder reactor" and again proposes cancellation of the Clinch River demonstration plant. Overall, the budget reflects a reduction in funds for the breeder program from $708 million in 1977, to $517 million in 1978 and further to $367 million in 1979—a decrease of nearly 50 percent in two years. The 1979 budget also reduces funding for nuclear fuel cycle activities by 13 percent.

These reductions seem inconsistent with Administration statements regarding the need to move to more permanent energy sources In addition, while the budget characterizes the Clinch River plant as an "unnecessarily expensive plant based on outmoded technology", nothing is proposed in its place which might help to move U.S. technology back to the forefront.

I know of the pressures being exerted by those who oppose the peaceful use of nuclear power in this country and who would like to stop our development programs. But it is obvious that others are proceeding without us and, in fact, may now be several years ahead of us. It appears that the choice is whether we decide to maintain a posture of leadership to assure safe use of nuclear energy in the world, and to secure our future energy options, or whether we abandon our leadership role to others and take added risk with respect to energy supplies through a hiatus in our nuclear development and demonstration programs. I think this latter course is dangerous to the Nation and strongly urge your personal reconsideration and redirection of the Administration's present planning.

I would be pleased to discuss this matter with you if you wish to do so.

Sincerely,

TOM BEVILL,
Chairman, Public Works Subcommittee.

KILLINGSWORTH: "THE CASE FOR THE HUMPHREY-HAWKINS BILL"

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. CONYERS. Mr. Speaker, with any new legislation that represents a major departure in the way Government solves problems, there is bound to be strong reaction. This is particularly the case with the Humphrey-Hawkins full employment bill. Conservative critics allege it will harm the economy. Critics on the left castigate it as being merely symbolic. Both positions misperceive the nature of H.R. 50.

The full employment bill does four things, which never have been tried before. It sets a goal of 4 percent or less unemployment (3 percent for adults) by 1983; coordinates economic and budget policy, as well as all phases of Federal activity, into a coherent full employment plan; utilizes a wide variety of policies to achieve the goals, including private sector incentives, public service jobs, and targeted investment, job training, and employment in economically depressed areas; and, provides safeguards against inflation. The very policy process which H.R. 50 establishes provides for monitoring and evaluation, thereby insuring that the most effective policy instruments will be chosen to achieve the full employment goals.

Last Friday Dr. Charles Killingsworth, the distinguished labor economist at Michigan State University, testified in support of H.R. 50 before the Senate Subcommittee on Employment, Poverty, and Migratory Labor, chaired by Senator GAYLORD NELSON. As a leading authority on employment policy, Dr. Killingsworth has considerable knowledge about the weaknesses of existing policy. I urge my colleagues to consider care-

fully his closely reasoned defense of Humphrey-Hawkins:

THE CASE FOR THE HUMPHREY-HAWKINS BILL
(By Charles C. Killingsworth*)

Rational discussion of the Humphrey-Hawkins Bill faces three impediments. The first impediment is the view that unemployment is now declining rapidly because of the operation of the "natural" forces in the economy, thereby reducing the need for measures like Humphrey-Hawkins. The second impediment is that there have been four different versions of the Humphrey-Hawkins Bill in the last several years, and the differences between these versions are in some respects quite substantial. The third impediment, related to the second, is that hardly anyone now writing or speaking for the popular media has actually read the full text of Humphrey-Hawkins IV, the version now under consideration. In this statement today, I wish to comment briefly on each of these impediments. Then I will turn to an appraisal of the most significant contributions that the bill would, in my judgment, make to employment policy in the United States.

Last month the Bureau of Labor Statistics announced that the national unemployment rate had dropped to 6.4 percent in December, 1977, and that revised seasonal adjustments showed a fairly steady decline in unemployment since the first quarter of the year. Some analysts have found these revised unemployments rates "incredible," but the general public finds no persuasive reason to doubt the validity of these official government figures.

Some opponents of Humphrey-Hawkins have suggested that the sharp recent drop in unemployment rates weakens the case for this proposed legislation. I believe that is a fallacious view. It is extremely important to recognize that at least half of the decline in unemployment since June, 1977, must be attributed to the rapid expansion of the Public Service Employment program since that date. More than 300,000 new jobs have been created in the last six months by that program. Most of those hired were unemployed when they got PSE jobs. There are also other governmental job creation programs which, although they have not expanded rapidly in the past six months, are quite large. College Work-Study, CETA youth programs, on-the-job training and similar on-going programs contribute to the employment total. My rough estimate is that about two million persons are currently enrolled in such programs (including 700,000 in Public Service Employment). If all of these programs had been terminated as of early December, the reported national unemployment rate would have been between 8.0 and 8.5 percent in that month, rather than the 6.4 percent actually reported. The Humphrey-Hawkins Bill implies continued reliance, as needed, on the direct job creation efforts of government. It is illogical, to put the matter mildly, to argue that because unemployment has now been substantially reduced—in large part by this policy—the need for Humphrey-Hawkins has also been reduced. This country still has the menacing problem of a labor market with inadequate capacity for spontaneous job creation in some areas.

It is understandable that some otherwise well-informed persons are not aware of the substantial differences between the successive versions of Humphrey-Hawkins. The sponsors of this bill have been remarkably responsive to the friendly and even the not-so-friendly critics of the proposal, and Humphrey-Hawkins IV is a markedly different bill from Humphrey-Hawkins I. So far as my personal views are concerned, I was unable to support Humphrey-Hawkins I; I had some reservations about Humphrey-Hawkins II; I endorsed Humphrey-Hawkins III; and I think Humphrey-Hawkins IV is a significant improvement over its predecessor. Many people with whom I have discussed the Humphrey-Hawkins proposal recently still have reservations based on provisions which no longer appear in the bill. A substantial educational effort will be necessary to overcome these obsolete criticisms.

Thus far, with a few outstanding exceptions the popular media have not been very helpful in informing the general public about the current Humphrey-Hawkins proposal. I get the impression that some of those writing and speaking on the subject have never actually read the full text of any of the proposals. Some of the assertions now being published appear to be based on gossip over one of the famous three-martini lunches. Thus, one respected national publication editorially condemns Humphrey-Hawkins IV on the ground that it is a "hollow promise" that will deliver nothing; and a few days later another national publication condemns the same bill on the ground that it will produce more inflation, more government spending, and more government intervention in the economy. It is hard to see how both could be right. I don't think either one is.

In my judgment, Humphrey-Hawkins makes four fundamental contributions to the development of a rational and effective employment policy in the United States. They are as follows:

(1) The bill recognizes fairly explicitly that merely pressing a button labeled "tax cuts" will not solve our chronic unemployment problem.

(2) The bill sets a goal of 4 percent unemployment (3 percent for adults) by 1983.

(3) The bill describes a variety of policy instruments that should be considered in developing a balanced program for the achievement of the target rate of unemployment.

(4) The bill provides a detailed set of procedures to be followed by the President and the Congress in developing the full employment program.

Some critics complain that the Humphrey-Hawkins Bill is virtually meaningless because it does not, by its own terms, provide a blueprint for the rapid achievement of full employment. I think understanding may be helped by comparing the Humphrey-Hawkins approach with the planning of a journey. First you pick a destination, and then a time of arrival. Then you get a set of road maps, showing the various routes you can follow to your destination. After these steps, you still have a great amount of planning to do; and after you are under way, you may have to change those plans because of unexpected conditions along the way. If you are a pessimist, you may keep in mind that there is a possibility that you may never reach your goal. But if you are a realist, you will know that it is certain you will never reach your goal if you never make a beginning. Humphrey-Hawkins provides that kind of beginning—the goal, the timetable, the road maps.

I think the most important contribution of Humphrey-Hawkins would be one that is only implied by the language of the bill. It would compel conscious planning of government policy for an explicit employment goal; thereby, it would induce a process of comparison, evaluation and selection of employment policy instruments on the basis of their relative effectiveness in reaching the goal of full employment. The result, I think, would be a considerable change in emphasis in our national employment policy. One briefly-stated example will illustrate the point. Since the early 1960s, our principal reliance has been on tax cuts to reduce unemployment. Relatively little effort has been made at high policy-making levels to compare the effectiveness, and especially the cost-effectiveness, of tax cuts and other employment policy instruments. Recent studies have shown, however, that of the various major employment policy instruments, tax cuts are the least cost-effective of all.

A tax cut of $8 billion, it has been shown, may be expected to create roughly 320,000 jobs. A Public Service Employment program costing $8 billion may be expected to create about 1,000,000 jobs initially. But that is an understatement of the total effect. By conservative estimating methods, it can be demonstrated that the spending of the PSE paychecks will create at least another 320,000 jobs. In other words, the secondary job creation effect of the PSE program is at least as large as the total effect of the tax cut. And it is important to emphasize a further point. The PSE program has been criticized on the ground that it creates jobs only in the public sector. That is a mistaken notion. Virtually all of the 320,000 jobs created by the spending of PSE paychecks will be in the private sector. The "bottom line" is that, with equal expenditures, the PSE program creates about four times as many jobs as a tax cut.

Furthermore, a tax cut is unlikely to do much to relieve the problem of communities that are hard-hit by structural unemployment—like Youngstown, Johnstown, Lackawanna, Akron, and a long list of others. Indeed, President Catrer's investment credit proposals may actually hasten the process of abandonment of aging production facilities, thus enlarging the overall problem of structural unemployment. And it is now generally recognized that tax cuts leave untouched the most extreme part of the national unemployment problem—that of black teenagers, especially those in central cities. By contrast, the PSE program can be (and to some extent already is) designed to reach precisely those communities and labor market groups that are helped least, or not at all, by tax cuts.*

I do not mean to imply that a Public Service Employment program is a panacea for unemployment. My point is that too often in the past our employment policy has been shaped by ad hoc decisions based on untested assumptions about the realtive effectiveness of this or that instrument, particularly tax cuts. The experience that we have accumulated in the last two decades with a variety of other remedies for unemployment—manpower training, subsidized private employment, relocation allowances, public works, and job banks, to mention a few—provides a basis for comparative analyses that will lead to the development of a more cost-effective and better-coordinated employment policy than we have had in the past.

I have left for the last what may be the most frequently-heard objection to the Humphrey-Hawkins Bill. Can we have full employment without inflation? My answer to that question is, probably not. But the question is quite misleading. I think inflation (to some degree at least) is likely to be with us for many years whether we have full employment or not. There is now a fairly widespread recognition among economists

*University Professor of Economics and Labor Industrial Relations, Michigan State University; President, Industrial Relations Research Association. The views stated herein are those of the author and should not be attributed to any organization with which he is affiliated.

*I have developed the ideas summarized in the paragraphs above in much more detail in a recent article (with Christopher T. King) entitled, "Tax Cuts and Employment Policy," published in a book entitled, Job Creation—What Works? (Salt Lake City: Olympus Press, 1977). The article has just been reprinted in full in the Congressional Record (House Proceedings) for January 26 and 30, 1978.

that in recent years our problem of inflation has not originated in the labor market. I do not believe that full employment will cure inflation. I do believe that inflation is an important problem, but it should be attacked at its true sources and not by the intolerable and ineffective "remedy" of high unemployment rates. The Humphrey-Hawkins Bill would make an indirect contribution to better control of inflation. I have just pointed out that this unemployment calls for the development of more cost-effective unemployment remedies than we have emphasized in the past. The predictions of accelerated inflation resulting from the Humphrey-Hawkins Bill have been based on analyses of the past, sometimes the very distant past), when our primary reliance has been on tax cuts, which are far more costly and far less effective as unemployment remedies than the more modern instruments developed in recent years. These predictions are as obsolete as the old-fashioned policies on which they are based.

One final observation. It would be fatuous to insist that Humphrey-Hawkins IV is perfect as it stands and that not a word or comma in it should be touched. I have some small remaining quibbles with it myself. But the bill itself includes explicit procedures for reconsideration of goals and methods in the light of experience. Furthermore, I believe that experience with employment and training legislation during the past two decades justifies considerable faith in the efficacy of legislative oversight, at least in this field. The example of the Manpower Development and Training Act of 1962 is instructive. Congress monitored that legislation closely. Major improvements in the law were enacted regularly, and the whole system was fundamentally revised after a dozen years of experience by the passage of the Comprehensive Employment and Training Act—which itself is now up for revision. As all informed persons know, this Subcommittee has played a key role in that process of steady improvement on the basis of experience. But improvement is not likely if you never even start the program. I believe that the Humphrey-Hawkins Bill represents a sound beginning, and I respectfully suggest that this Subcommittee would serve the nation and its people well by a favorable report on this bill.

THREE CHEERS FOR DR. BUTTERFIELD

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mrs. SCHROEDER. Mr. Speaker, the American Medical Association (AMA) recently adopted a statement on parent and newborn interaction supporting the bonding process between newborn infants and their mothers. The process enhances and humanizes the birth experience, allowing the mother, newborn infant, and father to make skin-to-skin contact and eye-to-eye contact in the moments immediately after birth.

Dr. L. Joseph Butterfield, M.D., chairman of the department of perintology at Children's Hospital in Denver and past chairman of the Committee on Maternal and Child Care, and one of my heroes, originally spearheaded the work of the AMA on the bonding philosophy and developed early drafts of the statement for the AMA. He has been working a long time trying to get the importance of the bonding concept recognized—it looks like he has finally done it.

The recognition of the importance of family-oriented childbirth is a major step in the right direction toward more family interaction. I think Dr. Butterfield hit the nail on the head when he said:

Until this entire country gets back into the family business, we are on a headlong course for disaster in terms of human relationships and family interaction.

THE NEED FOR AN INVESTIGATION OF ATTORNEY GENERAL BELL

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. CRANE. Mr. Speaker, Attorney General Bell's handling of the replacement of David Marston as the U.S. attorney for the eastern district of Pennsylvania has raised questions nationwide—in legal circles, on Capitol Hill, among the general public—as to the credibility not only of candidate Carter's campaign pledge to appoint Federal judges and prosecutors "strictly on the basis of merit" but also of nominee Bell's commitment under oath before the Senate Judiciary Committee that the Justice Department "will not be used for political purposes."

Most recently, however, information has been produced which alleges the existence of a deal between Griffin Bell and Senator JAMES EASTLAND that, in return for taking appointments to the Federal district courts out of the patronage system, U.S. attorneys' nominations would remain as political plums. This agreement is reported to have taken place on December 13, 1976—one week before his nomination by President Carter to be Attorney General and 3 weeks before his testimony (to the contrary) at his confirmation hearings.

Various other shreds of evidence are surfacing—mainly at inopportune moments such as Jody Powell's briefings or Presidential news conferences. One of these intriguing tidbits is the Attorney General's testimony on June 22, 1977, before Congressman ROBERT DRINAN, who is the author of a bill to turn the appointment of all U.S. attorneys over to the Attorney General under the civil service merit system. When asked if he could support this legislation, Bell replied he could not due to "an agreement with the Senate," that is, the aforementioned deal with Senator EASTLAND. With this rather shocking statement to handle, the Justice Department first denied the existence of such an agreement. Of late, Justice has admitted that "an oral exchange between Judge Bell and Senator EASTLAND * * * in late December of 1976 or early January of 1977" did in fact occur. Obviously, the date of this exchange is crucial to the unraveling of this tale.

Further, Attorney General Bell is quoted as saying on January 9, 1978, that he (Bell) had "nothing against Mr. Marston * * * but this is the political system in this country." Finally, after firing Marston, Bell flatly stated that the U.S. attorney's removal was precipitated "not because of lack of merit qualifications, but solely because of political considerations."

Innuendo feeds on innuendo; suspicion breeds even more suspicion. At present, the position of the chief arbiter of justice in our land, the Attorney General, is under fire. Among other movements from various quarters, Republican National Committee Chairman Bill Brock has called for the Attorney General's resignation, citing his politicization of the Justice Department and its appointment process. Our system of justice is, at present, viewed with skepticism by a large number of the American people; Federal officials in particular are subject to intense scrutiny and/or disdain for what is often rightly perceived to be a comfortable distance above the sanctions of the law.

Thus, I have introduced legislation, House Resolution 1002, calling for the investigation by the House Judiciary Committee of any infractions of the law by Attorney General Bell. Congress is the appropriate body to launch such a discovery process, and it is with the House Judiciary Committee that such investigatory power rests. The questions and suspicions of the American pepole, the Congress, and members of the legal profession deserve credible and well-documented answers. Should any irregularities in conduct be uncovered, these, too, should be brought out into the open and the appropriate disciplinary steps taken. This country should not be forced to sit still and wonder while another gaping wound in our democratic system is allowed to fester.

Thus, my resort to a congressional investigation. Let us deal with this problem out in the open—in front of the TV cameras if necessary—and find the answers to these questions and allegations in a meaningful and comprehensive manner.

OUR NATION'S VETERANS

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. YOUNG of Florida. Mr. Speaker, today the House Veterans' Affairs Subcommittee on Compensation, Pension and Insurance began to hold hearings on veterans' pension programs. During the course of the subcommittee's deliberations, numerous proposals dealing with our Nation's veterans will be considered. I had the opportunity to submit testimony on behalf of my own proposal which would provide a general service pension program for World War I veterans, as well as my proposal to protect veterans' pensions against cuts caused by increases in social security benefits. I believe very strongly that this legislation is of particular importance,

and would like to take this opportunity to bring my testimony to the attention of all my colleagues in the hope they, too, will actively work toward enactment of these proposals:

TESTIMONY OF HON. C. W. BILL YOUNG OF FLORIDA

Mr. Chairman, I appreciate having the opportunity to testify once again on the urgent need to provide special financial protection for our World War I veterans, as well as the need to protect all veterans' pensions against cuts caused by increases in social security benefits.

As you will recall, during last year's consideration of the Fiscal 1978 Budget Resolution, we were successful in adopting an amendment to H. Con. Res. 341 to increase budget authority by $700 million for the purpose of implementing a pension program for veterans of World War I—once such a penison program is approved by the Congress. During the debate of this important amendment, we received assurances that hearings would be held early this year on legislation to establish a World War I pension program. I am very pleased that this promise is being kept and that during the course of your Subcommittee's deliberations on pension reform, my bills and others to establish a World War I pension program will be considered.

Since I have actively fought for legislation to provide a general service pension for our veterans of the First World War throughout my tenure in the U.S. House of Representatives, it is extremely gratifying to note this resurgence of interest in the plight of World War I veterans by the Veterans' Affairs Committee. The creation of a general service pension program for these veterans and their widows is necessary if we are to provide them with benefits comparable to those provided the veterans of every other major war in which our country has, unfortunately, become involved. For example, veterans of the Spanish-American War and earlier conflicts were provided unrestricted pension programs; veterans of World War II, Korea and Vietnam are given broad benefits under the GI bill of rights. The legislation I have introduced (H.R. 1386 and H.R. 1387) is aimed at providing those World War I and Mexican Border veterans with some form of equity at a particularly difficult period in their lives.

My legislation proposes to extend the existing unrestricted pension program for Spanish-American War Veterans to include World War I and Mexican Border veterans and their survivors, and to increase the monthly pension rates under the expanded unrestricted pension program. The number of living World War I veterans fell below 1 million in fiscal year 1975 and, according to the Veterans' Administration, this figure is now somewhere around 700,000—and that number is decreasing at an average rate of 100,000 per year!

Mr. Chairman, when the cause of world freedom called, these Americans answered the challenge—often at great personal sacrifice. As their numbers rapidly decrease due to increasing age and, in many instances, deteriorating health, they need the help of the Nation they served so well. And they need this help now more than ever before. By ensuring these veterans and their families with adequate pensions—without regard to outside income—we will ensure that our World War I and Mexican Border veterans are able to maintain their dignity and respect during their remaining years.

I am also pleased to note that this able Subcommittee will consider another recurring problem facing all veterans, and the means by which to alleviate this problem relating to veterans' pensions versus social security increases. As I have previously testified before this Subcommittee, due to the large number of veterans residing in the Sixth Congressional District, I am also particularly aware of the plight of those veterans who have been stricken from the rolls, or who have had their pensions reduced, as a result of increased social security benefits. In response to the fact that VA pensions frequently go down when social security benefits automatically go up, the Congress has for the past several years enacted legislation providing increased veterans' benefits. Although these "catch-up" increases are usually not the same percentage as that of the social security increases, they are aimed at alleviating the present unfortunate situation confronting our Nation's veterans on a yearly basis. What is the object of doling out larger sums of social security to these people in an effort to allow them to barely keep pace with the rate of inflation while, at the same time, reducing their veterans' pensions as a result of these increased social security benefits?

Unless we enact legislation such as I've sponsored, this vicious cycle will continue to devastate our veterans year after year. My bill, H.R. 1385, is aimed at providing this necessary protection by stating that recipients of veterans' pensions are not to be penalized by increases in monthly social security benefits. Mr. Chairman, I urge this Subcommittee to delay no longer in correcting this inequitable situation so that our veterans will no longer have to face each New Year darkened by the prospect of lost or reduced pensions.

In conclusion, Mr. Chairman, I think the facts before us are crystal clear. Reform is long overdue, and the time remaining grows exceedingly short. We need to enact legislation to provide a general service pension program for World War I veterans, and we need to enact legislation to protect veterans pensions. I urge speedy committee action, and offer my assistance to do whatever is necessary to secure final approval of this legislation.

FORMER SECRETARY OF NAVY MIDDENDORF ALERTS US TO THE DANGER IN THE MEDITERRANEAN

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. KEMP. Mr. Speaker, earlier this week in a letter to the editor of the Washington Star (January 31, 1978), the distinguished former Secretary of the Navy, the Honorable J. William Middendorf II has provided a most impressive analysis of the dangerous situation now evolving in Italy. Italy is the host nation to our key naval installations in the Mediterranean. Moreover, Italy shares responsibility with the U.S. Navy for the security of NATO's southern flank. We all have an immense stake in the outcome of the parliamentary maneuvers now underway in Italy. Should these maneuvers succeed in placing Communist deputies in an Italian Government, the security of NATO could be gravely undermined. I commend Secretary Middendorf's letter to the attention of the Congress, and include the text of his well-informed letter:

REDS ON THE BLUE MEDITERRANEAN

The fall of the Italian government could signal peril ahead for the fragile fabric of the free world. Italy, a stalwart member of NATO, makes a major contribution to the security of Southern Europe and to its soft underbelly, the Mediterranean. The Italian navy, for example, presently shares with the U.S. Navy key responsibilities in keeping that body of water a relatively peaceful lake.

The large and growing Soviet naval presence in the area, coupled with the withdrawal of the British and our own increasingly strained naval resources, makes Italian support all the more valuable. Further, if it weren't for the availability of Italian port facilities, we would not be able to maintain anywhere near the peace-keeping presence there that we do now. The critically important stabilizing presence of the Sixth Fleet during the 1973 Middle East war would not have been possible without our use of these ports.

For one reason or another, most other Mediterranean ports have been closed to us, and the potential loss of Italian ports or, indeed, any weakening of Italy's NATO resolve and cooperation as a result of Communist influence within their government would be cataclysmic to the West.

The makeup of the new Italian government will thus be watched with greater than usual interest in the West. Southern Europe or, to be more precise, Latin Southern Europe, is faced with an inexorable advance of Communist parties from within. In Italy, France and Spain, Communist parties owe much of their success to their promise to build a different kind of Communist society one more humane than those in Eastern Europe, and independent of Moscow. Their leaders have repeatedly professed attachment to the principles of democracy and independence, have publicly criticized the repression of human rights in East European Communist countries and have promised that each Communist party has the right to decide on all internal matters without Moscow's interference.

Even if we don't question their sincerity, the real question is whether they can keep their promises once in power.

Let's take a closer look at the history of communism. Most Communist parties have started their political growth in "alliance" with other "progressive forces" in an attempt to solve some crucial national issue, usually to form a government. The next step is to share power in a government of "national unity," followed by a coup that leaves the Communists as the sole government.

The Communist moderate leaders of this first period are inevitably overthrown by hard-liners who accuse the former of weakness towards capitalism. The party is purged, bringing to the top those demanding "ideological purity." "Workers" and "peasants" replace intellectuals in key party positions. The terror begins: actual and potential opponents are physically exterminated, especially the moderate members of the Communist party. All revolutions must first devour their young.

One might argue that while this happened in Russia in 1917 (years later Kerensky, himself, told me how this process worked in his case) and in Eastern Europe in the late 1940s, times have changed. Not true. Look at the recent "national emergency" governments in South Vietnam and Cambodia in the transition period. The Communists first used representatives of churches and the bourgeoisie to gain their goals, then purged them all and even cracked down on the social categories that their former allies represented.

What this all means is that even if present Southern European Communist leaders were sincere in their desire to avoid the classical form of repressive communism, they would probably not be able to do so because of the unavoidable mechanics of the system.

It should be clear that the independence

of Communist countries towards Russia is imperfect and most temporary, while their sense of solidarity to Communist doctrine is constant. We should not underestimate the importance of their sharing a Communist ideology—they speak the same language. And there is also an emotional element: whatever differences exist, Russia remains the mother Communist country, and Moscow a Mecca for all Communists. Russian help will always be the preferred option to losing political power, because a pro-Moscow faction will always exist in any Communist party.

The recent very commendable statement by our State Department decrying Communist participation in the Italian government has been received with mixed feelings in Europe, and questions have been raised about our right to express opinions concerning momentous events in other countries. Like it or not, the fact remains that the United States is the main economic and military power in the free world, upon whose strength so many countries now depend. But we, too, depend on them. We cannot for long disregard what happens in other parts of the world. Embattled democratic forces in Southern Europe, under threat of communism, wait even long for our support.

Finally and more particularly, what these critics overlook is that we and Italy are members of a fundamental alliance and that the question of Communist participation in the government of an alliance member impinges directly on the solidarity and future of that alliance. The toleration shown by the democratic world to fascism in the 1930s led to the Second World War. We learned a bitter lesson the hard way. Let's not make the same mistake again.

J. WILLIAM MIDDENDORF II.

WASHINGTON, D.C.

ANOTHER VIEW OF THE WORLD OIL SITUATION IN 1985

HON. DAVE STOCKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. STOCKMAN. Mr. Speaker, as is so often the case, the vital question of world oil supply and demand in the mid-1980's has become the subject of much controversy among experts. Because certain of these experts have jobs at the Central Intelligence Agency, their view has tended to predominate in public discussion. President Carter and Energy Secretary Schlesinger have defended many of the high-cost energy policy choices in the proposed National Energy Act by pointing to the tremendous crisis that is to befall the world in 1985.

The Central Intelligence Agency does not have a monopoly on information in this area, however. That is why I would like to commend the following article to my colleagues. It contains the views of Arnold Safer, a vice president of the Irving Trust Co. of New York, which is one of the world's largest banks. Mr. Safer argues that the OPEC oil price increases of the early 1970's will lead to a great expansion in non-OPEC-controlled supplies within the next few years. The implications of his article have considerable significance in our deliberations here as we consider proposals to force fuel substitution and uneconomic conservation programs upon the American consumer. I urge my colleagues to read this article as a first step to arriving at a balanced judgment on the question of what the world oil situation will be during the next decade:

WORLD OIL EXPERTS COULD BE WRONG, ECONOMIST SAYS

(By Arnold E. Safer, Vice President, Economics, Irving Trust Co.)

NEW YORK.—The very rise in world oil prices begun in 1974 is likely to lead to major oil surpluses around the world in the years ahead. Both geology and economics support this view. It is largely political trends which suggest the scarcity theory.

First, the world's proven reserves of crude oil were some 15 billion barrels higher in January 1977 than they were in January 1974, when the energy crisis burst onto the scene. In other words, over the past three years new discoveries outpaced consumption by an average of five billion barrels per year, extending our future oil consumption horizon from about 31 years to 33 years.

Second, new reserves from the North Sea and Mexico are likely to be identified rapidly over the next two or three years, so that the world's proven reserves will continue to increase at least into the early 1980s.

Third, to the extent that the geologist's concept of ultimately discoverable reserves is at all useful, the world is estimated to contain some additional 1.5 trillion barrels or enough oil to last for another 65 years at projected future consumption rates.

Fourth, with world economic activity likely to remain sluggish for some time ahead, there is little possibility of a major boom in petroleum demand.

Finally, U.S. energy policy is now committed to allowing higher prices for newly discovered natural gas, either through deregulation or continued regulation at higher prices. The prospect of higher prices has encouraged significant new drilling which in turn could lead to a greater availability of gas, thereby arresting the trend toward substitution of oil for gas.

While other energy sources remain mired in environmentalist controversy, drilling for new oil and gas in the U.S. and around the world is proceeding at a rapid pace.

In light of all these trends, we are projecting a continued easing of world oil markets at least through 1982 and potentially through 1985. Not only will more abundant oil supplies offer the prospect of lower oil prices (in real terms), but they will create the market environment in which the U.S. government could develop policies to dilute OPEC's price-setting powers.

Within the context of this gradual shift of the world's oil markets toward an excess supply condition, U.S. energy policy should seek to change the commercial mechanism by which oil is imported. Without this change, it is unlikely that oil consumers will benefit optimally from the improved conditions.

World Consumption

From 1955 to 1973, world oil consumption grew at an average rate of more than 7% per year. Since 1973, annual world consumption has grown at only slightly more than 1%. High prices, slow economic growth and a new emphasis on conservation have all contributed to the sharp decline in the growth.

Between 1977 and 1980, we project a 3.5% annual growth in world oil consumption—somewhat more rapid than in 1977 but still only about half the long-term historical rate. This forecast is based upon GNP projections for the U.S. (4%), Western Europe (2.5%) and Japan (5%). It assumes that oil consumption grows at about the same rate, despite government rhetoric about conservation and despite attempts to substitute alternate energy sources.

By late 1980 or early 1981, the world economy is likely to experience a recession. Its magnitude is not expected to be as severe as that of the 1974–75 downturn but it will be of sufficient depth to impact world oil consumption. Although the timing of the European and Japanese downturns might differ from that of the U.S., we have assumed a concurrence of recession throughout the world. As a result, we have projected a decline of around 3.5% in consumption in 1981.

After the downturn, we expect strong economic recovery. World consumption is projected to grow at 4% in 1982, at 3.5% in 1983 and at 3% in 1984 and 1985. The importance of the projected recession and recovery lies in its relation to the non-cyclical growth of supply. That is, large excess supplies can be expected by late 1980 or early 1981, representing a combination of declining demand and increasing supply—a situation likely to persist for some time and one which represents a significantly different perception of the world oil market than is prevalent now.

NON-OPEC SUPPLIES

Two key assumptions underlie our projections of non-OPEC oil supplies. First, we are assuming that oil production in the lower 48 states will not continue to decline but will increase marginally after 1978. In 1977, U.S. oil production in the lower 48 appeared to have stabilized with crude oil at 8.1 MMB/D, natural gas liquids at 1.7 MMB/D and refinery processing gains at 0.6 MMB/D. We are assuming that continued increases in U.S. exploratory activity will keep lower 48 production stable at 10.4 MMB/D in 1978 and that gradual price decontrol will move this production up to 11.0 MMB/D by 1982.

The second key assumption is the continued growth of Sino-Soviet oil exports to the well publicized CIA report cited by President Carter at the time of his energy proposals. The CIA suggested that the Soviet Union would turn from a net exporter of one MMB/D to a net importer of two MMB/D by 1985.

Since the CIA study was issued, there have been a number of critical reviews which found serious fault with CIA's assumption. In particular, there is no firm reason to believe that Soviet production will decline significantly. Even if it were to fall off, the Soviet's need for hard Western currencies suggests that they would continue to export oil and substitute coal and nuclear fuel for domestic needs.

We estimate 19.3 MMB/D of non-OPEC production in the noncommunist world in 1977, up from 17.6 MMB/D in 1976. Another 1.2 MMB/D of estimated net Sino-Soviet exports to the West increased the total 1977 supplies outside of OPEC to 20.5 MMB/D.

For 1978, we expect non-OPEC sources to supply 22.6 MMB/D with most of the increase coming from Alaska and the North Sea. Increased Mexican and Sino-Soviet oil will raise total non-OPEC supplies to 26.5 MMB/D by 1980 and to more than 29 MMB/D by 1982. Part of these new supplies will come from smaller but still significant increases in such areas as Argentina, Brazil and other non-OPEC countries in the Mideast, Africa and Asia.

The average annual growth rate of non-OPEC supplies between 1977 and 1982 is estimated at more than 9% while the growth in world demand is forecast at around 2.5% per year.

Estimating oil production bevond 1982 is only guessing at what might be discovered in still unexplored regions. There are many significant potential pools of new oil known to geologists. These include Argentina, Vietnam, the U.S. east coast and Alaska. (Significantly for the U.S. picture, the east coast exploratory drilling is due to start soon.) Policymakers cannot count on new reserves coming from these areas but neither can they discount them.

OPEC SUPPLIES

OPEC oil production reached its peak in 1973 at close to 31 MMB/D. It maintained roughly this rate in 1974 but production declined substantially in 1975 with world recession. In 1976 OPEC production rebounded to 30.5 MMB/D and in 1977 is estimated to have averaged around 30 MMB/D. This included a sizable inventory buildup toward the end of the year, partly due to normal seasonal patterns and partly due to hedge buying in anticipation of an OPEC price rise in January 1978.

In 1973 and 1974 OPEC production reached two-thirds of world consumption. In 1975 world consumption declined as a result of recession. OPEC production declined even more and the OPEC proportion of total world demand fell to less than 60%. With economic recovery in 1976 and 1977, world demand and OPEC production expanded at about the same rate and the OPEC proportion has remained around 60%.

Our forecast of future OPEC production is derived from the difference between projected world consumption and projected non-OPEC production. Thus, a dramatic decline is projected for OPEC production in 1981 and 1982. This results from the dual assumption of economic recession and increased non-OPEC supplies at that time. We are, therefore, projecting that OPEC will be supplying less than half of world consumption in 1981 and 1982.

As total requirements for OPEC oil begin to decline over the next five years, OPEC will be faced with a fundamental challenge to its internal cohesion. Some member countries will have to cut back production in the face of rising import costs, thereby jeopardizing development programs already in progress. The way for any one OPEC country to maintain its oil exports in the face of declining demand, however, would be to cut prices and the incentive to do so will grow as excess capacity builds over the next few years.

To prevent this, OPEC would either have to set up a centralized allocation system or agree to lower prices for all member countries in an attempt to stimulate overall demand for OPTC oil. The adoption of either alternative will further erode OPEC unity and mean increased bargaining power for consuming countries.

U.S. POLICY OPTIONS

U.S. foreign policy should recognize the possibility that the potential instability within OPEC could lead to political repercussions in the Mideast. Present foreign policy perceptions concerning the Mideast are clouded by the official forecast of increasing world energy scarcities and thus tighter OPEC control over world oil supplies in the middle 1980s.

Despite our projection of an easing of international markets, we expect that U.S. imports will rise to at least nine MMB/D by 1985 and could be as high as 12 MMB/D. This is neither as low as the administration's goal of 6 MMB/D nor as high as the 16 MMB/D projected by some government studies in the absence of the official energy policy.

U.S. demand is assumed to grow at 4% per year over the 1977–85 period. With Alaskan oil supplies building up from an average of 0.2 MMB/D in 1977 to an expected 1.7 MMB/D by 1980, imports can be held at a fairly constant rate of around eight MMB/D through that time.

By 1985, however, we expect U.S. demand to outstrip increases in domestic production. As a result, U.S. oil imports are likely to rise after 1981, putting further stress on the balance of payments.

Nevertheless, the terms of thesse oil imports after 1981 could be quite different than at present.

First, if OPEC is supplying less than half of the world's oil demand by 1982, versus 60% today, then the cartel may have a more difficult time maintaining its internal cohesion and could become more susceptible to arm's length bargaining over crude prices.

Second, if non-OPEC foreign sources are providing 30% of world demand by 1982, versus less than 20% today, then a greater number of oil import sources will be available than at the present time.

To take advantage of these changes, serious consideration should be given to altering the commercial mechanism by which oil is imported into the U.S. A market exchange system for oil—possibly regulated by representatives of both consuming and producing nations—would be a more useful approach than the current OPEC practice of indexing world oil prices to world inflation rates. Over the next few years, as OPEC's alternatives become more limited, this option might become more acceptable to them.

U.S. international oil policy should focus on setting the stage for a new approach to oil pricing. It should also continue a dialogue with the oil-exporting nations that might lead to OPEC's recognition of the mutual gains a neutral market pricing system could provide.

COTTON WORK GLOVE INDUSTRY SUFFERING DUE TO IMPORTS

HON. E. THOMAS COLEMAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. COLEMAN. Mr. Speaker, today I had the opportunity to testify before the International Trade Commission so as to emphasize the dire situation now facing the American work glove industry due to rising imports of cotton work gloves from the People's Republic of China.

Hundreds of workers in my Sixth District of Missouri have lost their jobs during the past 4 years while imports from the PRC have more than tripled.

I know that many of my colleagues in the Congress face similar situations in their States, and I would like to take this opportunity to share with them my statement before the International Trade Commission:

STATEMENT OF THE HONORABLE E. THOMAS COLEMAN

Mr. Chairman, members of the Commission, I appreciate the opportunity to appear before you this morning in support of the petition filed by the Work Glove Manufacturers Association for import relief from cotton work gloves imported from the People's Republic of China.

The PRC has become an aggressive marketer of cotton work gloves in this country. I do not object to commercial relationships between our nation and a communist country, such as the PRC, so long as the relationship is mutually advantageous. But no country should be able to capriciously ignore the rules of fair trade to the detriment of American workers.

Rather than discuss all the legal issues with you at great length, which I am sure you are familiar with, I would like to focus on just one of the legal criteria for relief: market disruption. The definition of market disruption is found in Section 406(d)(2) of the 1974 Trade Act:

"Market disruption exists within a domestic industry whenever imports of an article, like or directly competitive with an article produced by such domestic industry, are increasing rapidly, either absolutely or relatively, so as to be a significant cause of material injury, or threat thereof, to such domestic industry."

I will leave it to the technicians who will follow me to specifically treat the questions of "like or directly competitive" articles and what constitutes a "rapidly increasing" level of imports. Let me briefly comment, however, on the question of material injury.

At one time the Sixth Congressional District of Missouri was the home of five cotton work glove factories, owned by two different companies: Lambert Manufacturing Company and Mid West Glove Corporation. Today for all practical purposes only two of these factories remain in production of cotton work gloves.

Mid West had a peak employment of about 425 in 1973–74. Today it employs 290 workers.

At one time it had about 160 employees involved in the manufacture of cotton work gloves in three different plants. Today only one factory remains—one factory is closed and the other has been sold but is no longer used for cotton work glove production—employing 50 people to produce cotton work gloves; 160 workers less than four years ago; 50 today.

Lambert Manufacturing has a similar story to tell. In 1974 it was employing about 170 people in the cotton work glove area. Today, it is down to 81 employees. Much to the credit of this employer, it has avoided laying off its employees. Instead it chose to scale down the work week, first to four days, then three days. But workers cannot afford to live on wages from a three day work week and many have left to look for other jobs. A large percentage of these workers are women, who either by age or family responsibilities cannot leave these communities to seek employment elsewhere. These people want to work—they don't want a government hand-out. But it is very difficult to find employment in a rural area.

Statistics cannot tell the human side of this tragedy in Rural America but they do serve as a fulcrum upon which your judgments must be based. So, let's take a brief look at the PRC's impact in this country. the PRC did not really begin to enter our market until 1973—the same year that our industry began its downward slide. In 1973 we imported 299,000 dozen pairs of cotton work gloves from the PRC. In 1976 that figure had more than tripled to 966,000 dozen pairs. And, the first 8 months of 1977 showed an almost 40% increase over the level of imports from the PRC in 1976.

Although I haven't seen any statistics to support this assertion yet, I am told that importers of cotton gloves are contending that there has been a decline in the level of imports from the PRC in the last few weeks and months. If this is so, two reasons for this phenomena come to mind. First, we have just come out of a dock strike that undoubtedly had a major impact on the unloadings of imported cotton work gloves. This factor alone may account for any recent "weakness" in the importation of these gloves from the PRC. The second factor may be this petition itself. When a petition similar to this one was filed in 1976 with the ITC, cotton work gloves imports dropped sharply during the months during which this Commission had that petition under consideration. Obviously, the petition had been filed at the peak of these imports, right? Wrong! Once the ITC rejected that petition the level of imports rocketed upwards again and has continued to rise until about the time a second petition is filed. I hope that ITC will not be lulled into a false sense of security by the recent aberration in what is a patently clear long term trend of increasing imports.

The diplomats may sound warnings of the repercussions that this petition may have on our relationships with the PRC. Nevertheless, you must not forget the mandate which Congress has given you in Section 406. A country's

ideology does not give it license to wreck havoc on a small, industry in this country.

Trade is not a one-way avenue that Communist nations can exploit at our expense. The PRC refuses to buy grain from American farmers. It buys from other nations. Yet, it has no qualms about dumping work gloves in this country to the detriment of American jobs. We need to send a clarion signal to the PRC that they can do business with the United States, but only according to the rules of fair trade.

Let me share with you some comments from a recent letter to President Carter to give you an idea of the concerns being voiced in my District:

"What if they should start importing peanuts from Red China at approximately 50% of your cost of production? What would your reaction be? We are sure that you would feel that there should be some type of restrictions placed on imported peanuts. . . . When one industry is so affected by imports, whether it be work gloves or peanuts, it starts a chain reaction which affects many other industries. So when we are speaking of the effect of imports on the Work Glove Industry, we are also speaking of the textile mills, the paper industry, the chemical industry, the tool and die industry, transportation, the corrugated box industry, and many, many others, and yes, possibly the farmers."

Let me suggest that perhaps even more important than the finding of serious injury is the type of relief which you will propose to the President. By statute the ITC is barred from recommending adjustment assistance. This is reassuring to my constituents who compare subsidies of this type to a "doctor placing a large band-aid on a critically ill cancer patient and telling him to go home, he is cured." Realistically, the only relief which will restore health to our domestic industry is an import quota.

I am fully confident you will upon the conclusion of these hearings find that the rising imports from the Peoples' Republic of China have caused material injury to the cotton work glove industry. By recommending the establishment of import quotas for cotton work gloves from the PRC you will have taken a significant step towards assuring the continuing vitality of our domestic work glove industry and the jobs of thousands of Americans.

Thank you again for your consideration of this serious problem.

THE SECOND CAREERS ACT OF 1978

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. WAXMAN. Mr. Chairman, today I am pleased to introduce the Second Careers Act of 1978. This legislation would create a comprehensive program for easing the unemployment crisis of the older worker. The program would be administered by the Department of Labor.

President Carter noted in his recent State of the Union Message that—

> Job opportunity—the chance to earn a decent living—is also a basic human right which we cannot and will not ignore.

Each American, regardless of age, should have the right to the opportunity for a job. In the truest sense, the right to work is basic to the right to survive. Older workers in this country are not afforded this basic human right and in fact begin to face age discrimination in employment and Federal job training programs as early as age 45.

The Second Careers Act of 1978 would redress in part the pattern of discrimination against older workers and afford them a suitable employment program which is responsive to their interests, life experiences, and the specific needs of our economy. The legislation would apply mainline employment techniques of the kind carried out by effective CETA title I programs for unemployed, underemployed and/or disadvantage people who are over 40 years of age. The bill provides subsidized wages for participants but with defined wage responsibilities for employers after a period of time.

Further, the bill includes the following kinds of mainline employment functions for program participants;

First. Analysis of the local labor force by comparative age factors. Such analysis would establish a defined universe of need for middle-aged and older workers in an area.

Second. Job market analysis—inventory of the available job stocks to determine new areas for job development.

Third. Development of a second career strategy plan. Such a plan would spell out the age profiles within the jurisdiction, the problems which workers over 40 have encountered, steps planners intend to take to meet the problems, and the specific programs to be implemented.

Fourth. Job and career counseling to promote responsible decisionmaking on the part of participants.

Fifth. Job development and employer relation functions which will promote effective job referral and placement.

Sixth. Allowance for programs which provide for participation in work or training on a part-time or flexible-time basis.

Recognizing that adequate research is unavailable to potential employers and the public on the capabilities of the older worker, the bill establishes the Institute on Age and Employment. The Institute would be charged with the promotion and dissemination of research on how to utilize the older worker more effectively. One year following enactment, the Institute would be required to forward to the Congress a formal policy and plan on how to better utilize middle age and older workers.

Included in the first year report would be policy options and alternatives to retirement which would emphasize retention and self-support of older workers. By developing an agenda on how to make employers aware of the ability and skills of older workers, the Institute would have have a practical impact on the personnel policies and practices of employers in both the public and private sectors.

Mr. Chairman, too often when we discuss the problems and needs of older Americans, we think exclusively in terms of social and health programs. While these programs are essential to improving the quality of life of older Americans, these programs view older Americans as individuals in need of support, who are otherwise unable to depend on their own resources. Many older persons can be productive, however, and do not need nor desire large amounts of support. These individuals wish to work, to be self-sufficient and continue contributing to society. Older workers cannot always find jobs however, and existing Federal job assistance programs are nonresponsive to their needs.

The U.S. Civil Rights Commission recently released a report which characterized age discrimination against older persons in Federal programs as "widespread." In a statement accompanying the report, the Commission said:

> We are shocked at the cavalier manner in which our society neglects older persons who often desperately need federally supported services and benefits.

In the case of job programs under the Comprehensive Employment and Training Act (CETA), the report confirmed what older workers have known all along—CETA administrators place the highest priority on finding jobs for people between age 22 and 44.

I readily admit that much of this bill could be put to work immediately through the current CETA structure. The fact is, however, that CETA does not work for older Americans. The older a person gets, the more difficult it will be to find a job and the less likely he or she will be to participate in an employment training program funded by the Federal Government. Age participation figures for CETA programs confirm this pattern. Persons between 55 and 65 receive just 5 percent of CETA provided services. Individuals over 65 represent a mere 0.9 percent of CETA recipients.

Over 1.4 million older workers are currently unemployed and actively seeking work. This figure represents almost 26 percent of all unemployed Americans. While the numbers of unemployed older Americans are lower than among younger age groups, we know that the length of unemployment is substantially higher for older job seekers. In fact, older workers can expect to be unemployed 30 percent to 70 percent longer than other age groups.

When we consider the category of "discouraged worker" the plight of the older worker becomes even more apparent. This group comprises workers who are no longer actively seeking work but are willing to take a job immediately if one were available. In 1975, there were over a million such workers. Over one-half were over 40 and about a third were over 55. As this pattern has held constant for the last 10 years, it suggests a structural discrimination based on age against older workers seeking a job. The recent report by the U.S. Civil Rights Commission confirms this trend.

These figures tell us that as long as an older worker remains employed, he is in good shape. However, should he later lose his job due to downturns in the economy or the pressure of technological change, he will have a difficult time rejoining the labor force. This trend is reinforced by a Federal job training program which fails to address the legitimate needs of the older worker.

There have been efforts to address the

employment problems of the older worker. Title IX of the Older Americans Act of 1965, the Community Service Employment Program for Older Americans, is specifically designed to provide jobs for Americans over age 55 who meet certain poverty criteria. Currently the program provides an estimated 37,500 jobs.

Measured against participants under CETA who are over 55, this number would constitute about half the group serviced. Yet measured against the estimated level of need for persons over 55 who both qualify for the senior aide program and who would take part if the opportunity were made available—estimated 5 million—the number pales into insignificance.

The need for employment support, job training and retaining and job placement services is demonstrated by the increase in complaints under the Age Discrimination in Employment Act of 1967. Over the last 3 years, complaints have increased by 55 percent. In addition, the numbers of persons over 40 joining together in litigation under the act have also increased. These actions indicate a pattern of discrimination and neglect on the part of the employer community, public and private sector, which must be corrected.

Last year, the House voted almost unanimously to enact amendments to the Age Discrimination in Employment Act of 1967. The legislation would raise the upper age limit for protection from age 65 to 70. Workers between ages 40 and 70, those who would be protected against age discrimination if the proposed 1977 amendments become law, make up over 40 percent of the U.S. work force and 36 percent of the population. This employment discrimination protection, however, is useless unless the Federal Government adopts formal employment policies to help older workers remain in the labor force.

The Federal Government must address ways to make work possible for persons who are out of the labor market involuntarily, employed at jobs which either pay little or employed at jobs which are becoming technologically obsolete. These individuals, older men and women, need to be placed back into the mainstream of American worklife. These workers do not want or need short term, artifically created jobs which disappear when the funds run out. They simply need to work at jobs which they physically can do, which pay decent wages and which provide them with a sense of being part of the working, contributing, taxpaying population.

Mr. Chairman, if America is to face the challenge of an expanded economy, the need for utilizing the capabilities and skills of older Americans will grow. The talents and experiences of older Americans represent a vast resource we dare not neglect. The time has come to champion a vibrant and fresh national policy toward employing the older worker. We need to adopt an aggressive and imaginative approach to using the skills of people in ways commensurate with their abilities.

I believe we have come late to the realization that an employment policy which takes jobs away from one age group in order to provide jobs for another is both shortsighted and cruel. It is time to articulate a domestic social policy which supports and encourages all those, regardless of age, who desire to work.

The Second Careers Act of 1978 provides an important first step toward achieving such goals. I invite my colleagues to join in cosponsoring this much needed legislation.

THE PANAMA CANAL GIVEAWAY

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. HANSEN. Mr. Speaker, the great debate of the Panama Canal is scheduled to start soon. The American people remain overwhelmingly opposed to the potential treaties, even in light of the massive administration attempts to saturate the media with protreaty propaganda.

One of our colleagues, Congressman LARRY MCDONALD has written a highly informative article concerning the canal controversy which I include for the RECORD and forthrightly recommend to all of my colleagues as well as every American who is interested in learning the real truth behind the proposed canal pacts. The article follows:

[From the Review of the News, Jan. 25, 1978]

GIVEAWAY

(By Congressman LAWRENCE PATTON MCDONALD)

The 1903 treaty between Panama and the United States ceded the Canal Zone to our country "in perpetuity." This means America has the right to be the lawful sovereign over that territory forever. During the past year the American people have nonetheless been subjected to an unprecedented propaganda campaign directed by the White House and offering a variety of excuses—all of them false—to support the giveaway of the Panama Canal to a Castroite military dictator.

During the next few weeks the United States Senate will be asked to ratify the treaty so rashly signed by President Carter. Enormous pressure is being put on each undecided and opposed Senator. Like most politicians, they are trying to compromise. Panama will make any deal so long as we give up our sovereignty and ownership of this vital American property. It will then take possession of our Canal and do as it pleases—ignoring treaties just as Nasser did with the Suez Canal and calling on the Soviets to defend its new interests.

Though well aware of this, President Carter has let it be known that certain "compromises" and "adjustments" to the treaty can be worked out by agreements between himself and Torrijos. Senators are thus talking about brave—and utterly worthless—modifications of the treaty.

Some Senators are confused by these "red herring" issues, and others are being dazzled by the White House courtship. They must be reminded that no compromise will be tolerated. Senators who talk about modifying the treaties are like those who would change the wording of a death warrant to make it sound more courteous to the family of the condemned prisoner.

Curiously, this effort to engineer U.S. abandonment of our strategic territory on the Isthmus of Panama went into operation 32 years ago. The presentation of the current giveaway treaty to the U.S. Senate is the culmination of a campaign that started in 1946 when Soviet agent Alger Hiss, then head of the State Department's Office of Political Affairs, sent to the fledgling United Nations a list of so-called "U.S. occupied territories" which included the Canal Zone. It was Communist agent Alger Hiss who presented to the world the concept that America was merely renting the land through which we had built the Canal and that one day we would have to give it back. But the yearly annuity paid to Panama that Communist agent Alger Hiss and his successors present as "rent" was in fact assumed when the Canal Company took on the obligations that the former Panama Railroad Company had paid to Colombia before Panama revolted and became independent. It was assuredly not "rent."

Most reasonable Americans would expect that after a high-ranking official like Alger Hiss is exposed as a Communist agent working for a hostile foreign power our government would immediately review his work, detail the instances in which he influenced U.S. policies to the detriment of our national interests and to the advantage of his Communist bosses, and then reverse those policies. This has not been the case with the Canal Zone.

There is no constitutional, legal, or practical reason for this nation to give away her territory on the Isthmus in obedience to Communist demands. It cannot be too frequently emphasized that the 1903 treaty with Panama specifies 19 times that Panama has ceded this territory to the United States; it states 7 times that the territory has been ceded in perpetuity; and, it then specifically states that Panama retains no sovereignty and powers over the territory which has now been ceded to the United States. As for the legitimacy of the agreement, it is important to note that, following the November 1903 signing of the treaty by the representatives of the United States and Panama, every member of the Cabinet of the Panamanian Government then signed the treaty ceding to the United States the Zone where the Canal was to be built.

Striving to obscure and confuse the basic issue—that the Canal and Canal Zone are the lawfully held property of the United States—the Carter Administration has put together a concerted propaganda effort to try to deny the validity of U.S. sovereignty. The Administration's distortions include describing the railroad annuity as "rent" for "leasing" the Canal from Panama, and creating a bogus issue of whether under the new proposed giveaway treaty the U.S. can "intervene" in defense of the Canal. The whole question of whether the United States may or may not defend the Canal under the proposed treaty is a "red herring." Right now, under the 1903 treaty, we own both the Canal Zone and the Canal, and thus it is our constitutional responsibility to defend this American territory against any aggressor. Those Senators and Congressmen who have allowed themselves to be confused by this false issue of whether and under what circumstances the United States could intervene in Panama in defense of the Canal are doing America a serious disservice.

The issue is that, under the 1903 treaty, America owns the territory of the Canal Zone and Canal on the Isthmus. The proposed Carter-Torrijos treaty would abrogate that treaty and give sovereignty over the territory to Panama, a country ruled by a Marxist military dictator who has demonstrated his commitment to a Castro-style Communist dictatorship.

The proposed giveaway treaty also states that as soon as the present Canal Zone is handed over to control of the Torrijos regime, U.S. citizens who are employees of the planned Panama Canal Commission, contractors and their dependents, "shall abstain

from any political activity in the Republic of Panama" and be subject to the rule of dictator Omar Torrijos. How Torrijos and his Marxist henchmen will interpret this is indicated by the fact that Freedom House—on whose board of directors National Security Advisor Zbigniew Brzezinski sits—rates Panama's respect for human and political rights as low as that of any other dictatorship in the Western Hemisphere.

But indeed the ultimate challenge from the Administration's "new foreign policy" activists and propagandists who are engineering this giveaway is their implied claim that this nation has no legitimate strategic or defense interests outside the borders of the continental United States.

We must remember that the Communist strategists have made a specialty of taking the maximum advantage of any such precedents. Communist writers have badly stated that wresting control of the U.S. territory on the Isthmus of Panama is a key step to Communist takeover of the Caribbean and Central America. In March 1973, the secretary-general of the Panamanian Communist Party, which calls itself the *Partido del Pueblo* (P.D.P.), wrote in the official international Communist journal *World Marxist Review* that Panama must be seen as "another weak link in the chain of imperialist oppression, one of the fronts in the great struggle for liberation."

Abandonment of the Canal Zone territory would be a clear signal to the Kremlin that this country no longer has the will, the moral fiber, or the ability to defend its overseas possessions and rights against aggression from even so pathetically weak a Soviet stooge as General Omar Torrijos. If the Senate approves this giveaway, the full political and strategic backing of the Kremlin, Castro, and the apprentice Stalins in Jamaica, Panama, and Guyana will redouble pressure for U.S. abandonment of our naval base in Guantánamo, and for the "liberation" of the Commonwealth of Puerto Rico into the hands of a totalitarian Communist minority.

Furthermore, radical pressure has already been built to press for American termination of our various defense and economic agreements with such anti-Communist countries as the Republic of China, South Korea, the Philippines, Iran, South Africa, and most of Latin America. Both U.S. and foreign revolutionary organizations have already begun agitational campaigns against U.S. ownership of islands in the Pacific and a number of these militant groups have actually laid claims to possession of continental U.S. territory For example, revolutionary Chicano groups with backers in Mexico and Cuba now claim title to most of the American Southwest; and a racist terrorist organization called the Republic of New Africa, again with Cuban support, claims ownership of extensive areas of the American South.

It is not improbable that unless we draw the line America will eventually be told to divest itself of such so-called "colonialist, imperialist" possessions as the State of Hawaii and the Virgin Islands; told that the terms of the Gadsden and Louisiana Purchases must be considered invalid; and, finally, informed that Northern California and Alaska must go back to Soviet Russia since their sale by the Czar was not validated by the Russian people.

This is no joke. Don't forget that Soviet agent Alger Hiss first listed the Canal Zone as a "U.S. occupied territory" some 32 years ago. The Communists are patient. It is their expectation that one day instead of arguing about a Canal giveaway treaty with Torrijos, we will find ourselves negotiating with a future People's Republic of Mexico for visiting rights at the Alamo.

The Panama Canal treaty has become the single most important policy issue of the Carter Administration. The President signed the giveaway treaty in a staged carnival atmosphere, making the most of contrived television and newspaper coverage. Assorted dignitaries from a number of Latin American countries had been invited to attend, including the leaders of anti-Communist countries the Administration had needlessly insulted by crediting false Leftist claims about alleged violations of "human rights." This was done to fool the American people and persuade them to go along with the betrayal of this vital trade and strategic defense asset worth some $7 billion.

The President declared that, after the treaty was signed and made public, all the American people would see it as good for both Panama and the United States. We have been waiting for months and have yet to see anyone point to any benefit whatsoever for the United States. The Administration's lobbyists nonetheless continue trying to persuade the American people to reject common sense and accept, if not actively support, the giveaway of this $7 billion working testimonial to American ingenuity, determination, and administrative efficiency. The giveaway artists are relying upon created fear, on manufactured guilt, and on apathy.

The "fear" they promote is that there will be riots, an attempt to sabotage the Canal, or even guerrilla war against this United States territory if the giveaway treaty is rejected. Certainly Panama's Communists have whipped up riots previously. In 1964, some 23 Panamanian rioters were killed and 4 American soldiers lost their lives. The exhibition of U.S. determination to protect its property and its citizens put an end to the disorders.

As for vulnerability, the Canal like every other particle of American territory is defended ultimately only by our will to resist. If we won't defend the U.S. Canal Zone from guerrillas, will we defend Texas or Arizona? We would do well to remember that, when it comes to guerrilla warfare, it is the United States which has trained the Latin American military forces in the counterinsurgency tactics which have proved so successful that Castro's many attempts to initiate guerrilla operations have repeatedly been quashed wherever Leftist political factors did not intervene.

As for "guilt," the Administration's propagandists join with the radical Left in claiming that America's territories are examples of repressive "colonialism" and are repugant to "world opinion." In fast, anti-American "world opinion" is coordinated by Soviet K.G.B.'s "black propaganda" directorate, its Marxist allies in the Western countries, and by such international propaganda fronts as the misnamed World Peace Council. Americans should face the fact that the United States, with its representative form of government, its respect for the fullest range of human rights, and the example of the prosperity created by independent citizens under our Free Enterprise system will always be hated by the totalitarian dictatorships and oligarchies which predominate in the Communist camp and the Third World.

Assurances from the giveaway proponents that "all is well" and Panama is too far away to be concerned with are designed to lull people into believing that their elected Senators and Representatives can handle the Panama question without input from the voters. This is not so. Without a continuing flood of letters from American voters opposing the Canal betrayal, Senators and Congressmen will become vulnerable to intensive White House pressure to acquiesce. Dozens of federal-aid projects are being offered or withdrawn, support is being promised for a Senator's favorite legislation, political organizations suddenly provide or withhold funds for reelection campaigns, and so forth. But repeated letters and telegrams from concerned constituents will let Senators and Congressmen know that the voters oppose this dangerous giveaway of strategic American property and will tolerate no retreat whatever.

In its desperate efforts to secure ratification of the Canal Treaty, the Administration has even accepted the help of allies on the Marxist Left. Among those actively involved in supporting the Panama treaty are:

Coalition for a New Foreign and Military Policy (C.N.F.M.P.), a Washington-based lobbying group which formerly aided the Vietnamese Communists by urging Congress to cut off economic and military support to the anti-Communist Government of South Vietnam. The C.N.F.M.P. leadership works with the Soviet World Peace Council in urging unilateral Western disarmament and a massive slash in America's defense budget in order to fund bloated socialist welfare projects. It has been widely publicizing the fact that the White House credited it with being the principal influence in the President's decision to terminate the production of the B–1 bomber. The C.N.F.M.P.'s foreign-policy statements are drafted by associates of the Marxist Institute for Policy Studies (I.P.S.), where the late K.G.B. agent Orlando Letelier has been replaced by the self-admitted Castroite propagandist Saul Landau.

Washington Office on Latin America (W.O.L.A.), another Washington-based lobbying group which supports Castroite terrorist groups such as the Sandinista Liberation Front in Nicaragua. The W.O.L.A. is funded by some of the febrile extremists working with and in the National Council of Churches. It and its circle promote the "Christian socialist liberation theology," viewing Christ as a moral and intellectual forbear of terrorist Ché Guevara.

Washington's Ecumenical Program for Inter-American Communication and Action (E.P.I.C.A.), funded by the National Council of Churches. This pro-treaty group has staffed its offices with activist leaders of pro-terrorist Castroite groups including the Puerto Rican Solidarity Committee, the anti-Bicentennial July 4th Coalition, Non-Intervention in Chile, and the Panamanian Solidarity Committee.

American Friends Service Committee (A.F.S.C.), the Philadelphia-based "anti-imperialist" organization which is not part of the Society of Friends. This group supports terrorism and armed struggle so long as they are directed against what A.F.S.C. believes to be the root of all war and oppression—the American form of government and our Free Enterprise system. It is active in the fight for the giveaway treaty.

National Council of Churches, Committee on the Caribbean and Latin America, which is funded with the offerings of churchgoers who have no voice or vote in the disposition of their money. During this past year the N.C.C. took up the causes of the Wilmington 10, defendants convicted of arson and riot conspiracy in North Carolina, and of members of the terrorist American Indian Movement charged and convicted of violent felonies. It too is now neck deep in helping Mr. Carter sell the Canal giveaway.

Joining with these Leftist groups in supporting the treaties are a number of the largest U.S. banks, some of which are seriously overextended in unsecured "soft" loans to irresponsible Third World countries like Panama.

The total Panamanian debt to U.S. banks is $1.7 billion—almost all of it accumulated under dictator Torrijos. Panama must allocate some $47 million—which is 39 percent of its national Budget—to debt service on these massive loans. The loans were necessary because the Torrijos regime had run the Panamanian economy into the ground. Undoubtedly the directors of the creditor U.S. banks—which include Chase Manhattan

Bank, First National City Bank, Bank of America, Banker's Trust, First National Bank of Chicago, Republic National Bank of Dallas, and treaty negotiator Sol Linowitz's Marine Midland Bank—see that the only way of getting back their money with interest is to get control of the Canal and Canal Zone for Torrijos—so he can extort the money owed to the international banks from shipping fees. Not surprisingly, some of the large companies that have interlocking directorates with these banks have also joined in the campaign to give this strategic American territory to the Marxist regime in Panama.

The fight to block ratification of the giveaway treaties now pits the organized lobbyists of the White House, the radical Left, and the banking elite against an outraged American people. The people can win if they increase their efforts now with letters, telegrams, and telephone calls to their Senators. What must be emphasized is that American sovereignty over the U.S. Canal Zone must not be compromised. Period.

Already such ambitious politicians as Senator Howard Baker (R.-Tennessee) are proposing to add agreeable language to the treaty if only the Senate will consent to give away the Canal. Such reservations and codicils as are proposed, to repeat, will amount to little more than polite language in a death warrant. Our Senators must be urged to Vote No on the Canal treaties.

REPUBLICANS ARE TURNING TO CONABLE AS SPOKESMAN IN CONGRESS

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. RHODES. Mr. Speaker, recently my good friend and colleague BARBER CONABLE was the subject of a profile in the New York Times. As many of us know, these journalistic sketches often can be wide of the mark in their portrayals of various individuals.

However, when the New York Times described BARBER CONABLE as a "Republican wheelhorse," in the most positive sense of that term, it scored a bullseye. I know that I speak for many Members on both sides of the aisle when I say that his voice is one to which I pay particular heed, especially when he addresses matters affecting fiscal and tax policy.

I hope my colleagues will enjoy reading this article as much as I have:

[From the New York Times, Jan. 21, 1978]

REPUBLICANS ARE TURNING TO CONABLE AS THEIR SPOKESMAN IN CONGRESS

WASHINGTON.—Although he is in his seventh term in Congress, he still gets mail addressed to "Barbara." And some of the letters come from women's rights groups "as if he's one of them," an aide says. Representative Barber B. Conable Jr. of upstate New York is not rankled by it. He has been accustomed for a long time to the "barbarazing" of his name.

What is far more important is that colleagues in the House have no trouble identifying him as a Republican wheelhorse. The 55-year-old conservative lawmaker from Genesee County in western New York is the floor manager and chief Republican spokesman for many of the major bills considered by the House. In the coming months, he will be one of the principal Republican voices on welfare revision and tax reform, including tax cuts.

On Capitol Hill he is considered the "most national" of New York State's 39 Representatives, a number of whom have been characterized as excessively parochial. In fact, Mr. Conable says: "I'm not very amenable to arguments that a bill 'is good for New York.'"

A NATIONAL APPROACH TO ISSUES

He insists on dealing with issues as national, not regional, matters. As for the question of more Federal help to New York City and state, he says: "A bill must not become just a New York position or it's foredoomed. What we do has got to make economic sense for the nation."

His Capitol Hill office is a reflection of a solid-citizen's love of tradition. There is a carefully preserved century-old desk with cabinet doors and more than 100 compartments and cubby holes that he calls "a cross between a juke box and an altar." The rugs are antiques handed down by his mother.

On the walls there is a collection of Indian artifacts, including ceremonial masks and 10 pipe-tomahawks, the first of them acquired when he was an Eagle Scout; also, about 20 prints of the Federal Capitol, some very rare.

His home is a farm house built in 1835 in Alexander, a crossroads village of 400 people. Behind it is his 180-acre forested plot where he goes to cut wood "when I feel out of sorts." A nature lover, he also plants thousands of seedlings to keep the forest young.

Mr. Conable is a self-styled "Jefferson Republican," and for the last year he has been the top-ranking Republican member on the powerful House Ways and Means Committee, which will be handling welfare and tax matters this year. He has achieved "almost cult status in Washington," says National Journal, a well-regarded Washington periodical. "House members, lobbyists and journalists speak admiringly of him, more because of his intellectual brilliance than because of his expertise."

Mr. Conable, the father of four, rarely spends a weekend in his comfortable town house not far from Capitol Hill. In his 13 years in Congress, he has never made fewer than 40 trips a year back to his district, which includes the western, largely Democratic half of Rochester, suburban Monroe County and the rural counties of Genesee, Livingston, Ontario and Wyoming, having much more in common with the Middle West than New York City.

Many Congressmen prepare news letters for the constituents back home, but it is doubtful if any spend as much effort and thought on it as Mr. Conable. He will sit in a high-backed swivel-chair—turn out a "Washington Report" that is not only full of details about what he has been working on but also offers such unorthodox political philosophy as this:

"For politicians, discretion is avoiding offense to the organized activists. It doesn't matter if the offense is justified. It doesn't matter if the organized activists are a minority of the people. Don't do it. Old Pol, even if it means you have to damage the majority, who are non-organized and non-activist."

As a minority member of Congress, no matter how effective he may be on various sections, of a bill, he is likely to be on the losing side on the final vote. For example, his detailed, carefully crafted plan for stabilizing the Social Security system with relatively small increases in employee-employer taxes, starting in 1981, was shoved aside by the Democratic majority.

Instead a bill with a substantial tax increase was approved, leading Mr. Conable to tell constituents in his "Washington Report" "the public reaction to this staggering increase in taxes has understandably been one of outrage."

The approved bill included features fought for by Mr. Conable to make significant improvements in the treatment of women under the Social Security system. Mr. Conable sums up his roll as follows: "As ranking member of Ways and Means, people listen to me when I talk. What is power? All it is, is influence. As long as people listen when I talk I've got some influence."

HIGH SILHOUETTE ROLE DROPPED

When Mr. Conable had the chance in January to take the top Republican spot on the Ways and Means Committee he quickly dropped his "high silhouette role" as G.O.P. policy chairman that he had held for three years. Party rules would not let him hold two such top positions.

As he explained to constituents, it was not a tough choice. "I never have been very ambitious politically, neither viewing the House as a career nor as a step to higher political office," he wrote. "The Ways and Means Committee is a great place for someone interested in legislating, in my mind the reason for my being here, and so I made it my preference."

He has had no serious trouble in beating Democrats in his district in recent years, including the popular Midge Constanza in 1974. She is now a top White House staff member.

The tall, bespectacled Mr. Conable got his A.B. Degree at Cornell in 1942 at the age of 19, completing the four-year course in three years. He joined the Marine Corps as a private, but by the time he went ashore with an assault wave at Iwo Jima in February 1945 he was a first lieutenant; and he finally worked his way up to the rank of colonel. He got his law degree at Cornell in 1948.

Mr. Conable enjoys concocting descriptions with some punch to them. Here are some recent Conable-isms:

On the Carter Administration's welfare revision plan—"It's got to be simplified. They haven't been honest about the cost of it so no one has confidence in the impact of the whole package. The cost estimate is phony as a $17 bill."

On the performance of Congress—"The 95th Congress is half over and if you started recounting our achievements you'd realize that, well, we're not halfway there. We started the year with a full plate, legislatively speaking. We're still chewing over the first big morsels we tried to swallow, and what's left looks more and more indigestible."

On a New York Congressional colleague who shall be nameless—"He's a dignified man and stands for nothing."

During the Gerald R. Ford-Ronald Reagan battle of 1976, Mr. Conable supported Mr. Ford all the way. While describing himself as a conservative, he contends that a lot of the Reagan conservatives "are not in the real world."

As a youngster, Barber Conable was teased by other boys who recited an old English rhyme:

"Barber, Barber, shave a pig,
How many hairs to make a wig?
Four and twenty that's enough.
Give the poor Barber a pinch of snuff."

A Conable great-grandfather married Sophia Barber, and both the Representative's grandfather and father were named "Barber." His father was county judge for Wyoming County and was succeeded by the Congressman's brother, John, who still holds the position.

Mr. Conable had three daughters (Anne, Jane and Emily) before begetting a son, and then remembering that old rhyme that used to ring in his ears, he says: "That's why I named my son Sam, and not Barber."

REMARKS OF DAVID B. SENTELLE

HON. JAMES G. MARTIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. MARTIN. Mr. Speaker, I am happy and honored to be able to submit these inspirational remarks given at the Charlotte, N.C., Civitan Club's luncheon. Mr. David B. Sentelle graciously welcomed "aboard" new citizens in a way I know added to their excitement and exhilaration of the occasion. His heartfelt comments should cause all of us to pause and reflect on our free country, so thoughtfully described by Mr. Sentelle as the "greatest ship of state":

REMARKS OF DAVID B. SENTELLE

Ladies and Gentlemen, my fellow Americans, welcome aboard. Welcome to passage, if you would, of the greatest ship of state, sailing on the sea of international nationhood today. Welcome, if you would, to the right to complain.

Some years ago, a gentleman from a middle-eastern nation arrived in New York. From there, he moved to a midwestern city where, with the help of friends, he established a small restaurant which became a gathering place for the steel workers and union leaders in that mid-western city. For years, they gathered there to drink coffee, eat apple pie, and complain, as Americans are wont to complain about the state of our government.

For years, the proprietor made no contribution to these complaints. Suddenly, one day he joined in and complained as bitterly as anybody in the group. Finally the union president asked him—Ali, why is it that suddenly you have begun to join in our complaints? Ali told him—one does not complain when one is a guest in the home of his friends. Then he proudly produced the papers that proclaimed him an American citizen and declared that when one has married into the family, he has earned the right to gripe.

You are now members of the family, and I welcome you to the greatest griping society perhaps ever to exist in the world. Welcome, in short, to the family.

It is difficult to know what is important enough to say to new members of this family. In welcoming new citizens to the United States, it would be easy to talk about freedom. It would be easy to say—whatever nation you came from, or whatever government you existed under before, you have enjoyed no more freedom, and probably a great deal less, than will be yours for the rest of your life.

It would be easy, but it would be redundant. It would be safe to categorize the achievements of immigrants and contributions of persons born beyond these shores, to begin with Alexander Hamilton and his great role in the launching of his ship of state, and to read a list as long perhaps as my arm, closing with Henry Kissinger and his international reputation. It would be safe, but again, it would be redundant, as you know about freedom more than we.

So, do you know, that we are a nation of immigrants. So, do you know, that those of us who were born here, save for those few who belong to the Indian nation, are immigrants also. Even those of us who may not know the tangled web of our own roots know that our roots lie beyond the oceans and reach into some European or Asiatic or other non-American nation, and you know that too.

You know probably, more of this history of this nation than do most who were born in it.

It would be easy and safe again to talk about the strength and material success to which you have come, but again, you know it. You know that poverty in this nation is usually opulent compared to middle class of most of the nations of the world.

No, I wish instead to speak to you of the family that you have joined, of the love that exists therein. The English language is impoverished by having only one word for love. There ought to be, as there is in the Greek, a number of words to express different degrees and kinds of love, because there are many kinds of love.

And outside of divine love, probably the greatest and the most unselfish is that which exists within the family, between the parent and the child, or conversely between the child and the parent. That love can be the most beautiful when it is not the love between the natural parent and the natural child, but the love between the chosen. Billy Graham has said that going to church doesn't make you a Christian any more than going to a garage makes you a car. It is equally true that having a child doesn't make you a parent any more than having a piano makes you a musician.

A biological act produces natural children, even though the biological act may have been engaged in only for the gratification of biological desire. Not so with adoption. Adoption occurs because the new parent has love to offer; the new child has love to receive. Your act today and over the last few years has been an act of mutual adoption, for which I can think of few parallels.

One, perhaps the best, is from ancient Rome, when under the laws of that great nation, two adults, an older man and a younger man, who had found a love for each other to great to express in ordinary friendship, could go before a magistrate of ancient Rome and adopt each other as father and son, as did Julius and Augustus Caesar, as did Augustus and Agrippa, as has the United States and you.

Again, under the laws of North Carolina today, a child above the age of twelve may consent to his or her adoption by an adult, joining in that petition to the courts of North Carolina because of their mutual love, so has the United States and you.

For our nation is a parent. The word patriot comes from the Latin word for father. It is your love, your choice, of this new nation that has made you seek it as your new parent. It is the love of this nation for people like you that has made it accept you as its new child.

Welcome, then, to the family. Like all families, we have our problems. Like all families, we gripe and complain about each other. Among strangers, we wear masks. Among strangers, we do not show ourselves or our feelings, but to our families we can be who we are.

If you want to hear an amazing change in tone of voice, you just listen to a woman answer the telephone. And I guess the same is true of a man, but being a man, I don't see it in us. You listen to a woman answer the telephone, and when she doesn't know who's on the other end, she says—Hello?—in her sweetest voice. And then it's her husband who speaks on the other end, and he says—Hi, Honey—and she says—Oh, it's you—because she feels bad and she doesn't have to hide from him the fact that she feels bad. We can show who we really are, and she knows he loves her.

So it is in the family of a nation. We don't have to hide from each other when we feel bad. We can show who we really are. Welcome to that love, welcome to that honesty, wherever you have been at large in the world before, welcome home, for home now you are. Home, not in a comfortable, always peaceful, always gentle home, but home in a house boat, a rocking ship, that sails on stormy seas. A houseboat that sometimes runs out of fuel for its engines as we have run short on fuel for our industrial engines, these last few years.

A houseboat that sometimes suffers from a mutinous crew, at times perhaps on incompetent captain, but a houseboat that has sailed through storms before and with your help and the grace of God, will sail through the storms of today ready to receive, as it received you, those castaways who love its crew and love its passengers and wish to become one in their labors of setting a straight and true course.

THE PROBLEM OF HOSPITAL COSTS

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. SYMMS. Mr. Speaker, almost everyone is aware of the high costs of medical care today, especially hospital costs. What many people do not realize, however, is that Government intervention into the private practice of medicine is largely to blame for skyrocketing costs of medical care in the United States.

The Educational Research Institute of the American Conservative Union released a study a few months ago which analyzed the problem of hospital costs. The study was performed by Ted Christopher, a junior at Harvard University. I commend Mr. Christopher's study to my colleagues in Congress:

THE PROBLEM OF HOSPITAL COSTS

(By Ted Christopher)

When Senator Edward M. Kennedy introduced the Carter Administration's plan to limit increases in hospital budgets, he called attention to the huge expenditures by Americans on hospital services: "Last year the nation's total hospital bill jumped to $55.4 billion, or more than $1000 per family . . . Americans today must work more than one full month of every year just to pay for their health care—two weeks' wages for hospital costs alone." [1]

As Kennedy and many others note, moreover, the trend is one of rising costs. President Carter puts it: "Since 1950, the cost of a day's care in the hospital has increased more than 1000 per cent—over eight times the rise in the Consumer Price Index. Today, the average hospital stay costs over $1300; just 12 years ago, a slightly shorter stay cost less than $300. And in the next year expenditures on hospital care may rise another 16 per cent." [2]

Different people variously attribute this sizable increase to patients, physicians and to the hospitals themselves. The President suggests that the private sector is somehow responsible or can alter the situation in some fashion. "The private sector's response to the challenges of cost containment will help decide its future role in our health care system."

Beyond these partial statements, however, there seems to be little public attention to the source of rising hospital—and other health care—costs. In particular, minimal notice is given the fact that the problems of

---

Footnotes at end of article.

runaway health costs have become especially acute in the past decade, which happens to have been a period of sharply escalated Federal involvement in the medical field, through Medicare and Medicaid. There are numerous data suggesting the conjuncture of Federal involvement and rising costs is more than coincidence, that in fact the relationship is one of cause and effect.

It is noteworthy to begin with that, before the adoption of Medicare and Medicaid, the hospital price index was actually lower than the consumer price index, taking 1967 as the base year for comparison. In 1965, the CPI was 94.5, the hospital index 76.6. Five years later, consumer prices had risen to 116.3, a rather modest increase, while hospital prices had doubled to 145.4. Since 1970, consumer prices have risen to 172, while hospital prices have doubled yet again, to 282. In the decade after adoption of Medicare and Medicaid, in other words, hospital charges increased by roughly 300 per cent, consumer prices by 75 per cent.

The Department of Health, Education, and Welfare itself has stressed this correlation. "The medical price index," says HEW, "accelerated during 1965–70, but decelerated rapidly with the imposition of cost controls in 1971. Whereas prices for physicians and dental services did not move much faster than the CPI (except during 1965–70), the increases in rates for a hospital semi-private room ranged from two to three times the annual rate of increase experienced by the CPI, with notable acceleration recorded after the onset of Medicare." [3]

THE SPENDING EXPLOSION

In 1965, total spending for personal health care in the United States amounted to $41 billion—$31 billion in the private sector, $10 billion in the public sector. Since that time, there has been an exponential increase in the amount of money spent on health care. In 1974, the total figure was $104 billion, with the major increase occurring in the public sector. Private spending had gone up to $63 billion (about the same rate of increase as in the preceding decade), while government spending had grown to $41 billion.

The Council on Wage and Price Stability has summarized the process this way: "Since 1965, expenditures under private health insurance plans have increased 229 per cent—from $8.3 billion in 1965 to $27.3 billion in 1975. However, the proportion of total personal health care expenditures met by private health insurance has been relatively stable, reaching 26.5 per cent of expenditures in 1975.

"The rapid growth in private third-party payments in the last decade is dwarfed by the growth in public expenditures resulting from Medicare and Medicaid. Government expenditures for personal health care jumped 484 per cent from $7 billion to $40.9 billion, between 1965 and 1975. Government health care expenditure thus accounted for 39.7 per cent of personal health care expenditures in 1975, compared to 20.8 per cent in 1965. The government's impact is particularly noticeable in the hospital sector, where it met 55 per cent of expenditures in 1975." [4] (Even the growth of private insurance payments is traceable in considerable measure to official policy. This phenomenon, as noted by Harvard's Martin Feldstein in *The Public Interest*, has been strongly encouraged by tax treatment of insurance premiums as compared to taxes on personal income. "Individual's can deduct about half the premiums they pay for health insurance," Feldstein notes. "More important, employer payments for insurance are excluded from the taxable income of the employes as well as the employers. These premiums are also not subject to social security taxes or state income taxes. Thus, even for a relatively low income family, the inducement to buy insurance can be quite substantial . . ." [5])

The effect of such an increase in medical outlay would be inflationary on the face of it, since this rapid hike in spending meant a larger number of dollars were competing for medical services and facilities, bidding up the price of all the factors in the medical economy. While the supply side could and did expand in response to the sudden escalation of demand, it could not increase as rapidly as the number of dollars flowing into the system. Rising prices were the predictable result.

Beyond the sheer effect of raw demand, however, was the particular method of medical financing adopted under Medicare and Medicaid, stressing third party payments in behalf of consumers and after-the-fact reimbursement of providers. Through the impact of these programs, more than 90 per cent of hospital bills are now picked up by someone other than the patient, and 55 per cent are absorbed by the Federal government. The result, from the patient's standpoint, is that the service received is seen as "free," or nearly so, at the point of consumption.

PRICE IS NO OBJECT

Though this arrangement conforms to prevailing notions of medical care as a "right," it ignores the role of price as a regulator of demand. As prices go up, other things being equal, demand is curtailed; as prices go down, demand is increased. At a zero price for a scarce resource of service, demand would theoretically be infinite. In the case of hospital and other medical care, as the price to the consumer has been reduced at the point of consumption, demand for medical care, in quantity and quality, has risen sharply.

"In the United States," notes medical economist Paul Ginsburg of Michigan State University, "the system of hospital financing is approaching one where patients will have no incentive to consider price. Already, 90 per cent of hospital expenditures are covered by third-party payment . . . If third-party coverage is approaching 100 per cent it appears that neither charge nor cost-reimbursement is consonant with a 'quality' level of less than the limit of technology . . . With patients insensitive to price, and with costs or charges reimbursed, there is no restriction of increasing levels of quality . . . and quantity to the patients' saturation point." [6]

Representative Philip M. Crane (R-Ill.) likewise observes: "With only 10 per cent of hospital expenses being paid out of pocket by the consumers in 1977, there is obviously little incentive to choose the least expensive service since the difference in cost to the consumer is negligible. He pays only $5 more for the $100 treatment than the one costing $50." [7]

In view of these considerations, it is hardly surprising that, following the establishment of Medicare, hospital admissions among the elderly increased by 25 per cent and the length of hospital stays increased by 50 per cent. Dr. John B. Reiss of the New Jersey State Department of Health has noted: "The divorce of direct payment of use of health care, and payment for that care through third-party reimbursement may well have some effect on continuing increases in consumer demand for health care services. People who seek health care generally are not concerned with price at the time which they enter the system." [8] Joseph D. Hawkins, Texas State Insurance Commissioner, adds: "Insurance that at one time was purchased to cover the cost of unexpected illness and injury, increases health costs by stimulating the demand for broader, first dollar coverages. This, in turn, generates the provision of more complete, technical and expensive care." [9]

COST REIMBURSEMENT

As these comments suggest, the prevailing system of reimbursement to health care providers has also played an important role in boosting health expenditures. In essence, providers are reimbursed by the Federal government according to their costs or customary charges. This means, in a nutshell, that in order to get more money, the hospital needs only to spend more, passing the bill along to the Federal government. When confronted by a demand for augmented wages or a proposal to buy more expensive equipment to upgrade the quality of care, therefore, the hospital administrator has no particular reason to turn it down.

New York University economist Herbert Klarman explains: "Cost reimbursement . . . was widely adopted under Medicare and Medicaid. Under this method of payment a hospital is paid a daily rate related to its own cost of operation. The hospital administrator can no longer deny requests for higher wages or more supplies on the ground that money is lacking; to get money, he need only spend more." [10] Msgr. James P. Cassidy of the Department of Health and Hospitals of the Catholic Charities, Archdiocese of New York, agrees: "The more you spend, the greater your chance of reimbursement, and if you saved money in the past and did not spend your money, then you are penalized by lower reimbursement." [11]

Increased hospital wages have been one obvious effect of this procedure. Before 1965, salaries of hospital employees grew at a rate of about 5 per cent per year. Since then, the rate of increase has risen to double the previous level. Referring to expenditures by hospitals, columnist M. Stanton Evans has pointed out that "by far the vast majority of these expenditures—roughly 70 per cent—have gone to pay the wages of hospital personnel, as wages pushed steadily higher by employee demands have connected up with public funds." [12] Representative Crane has noted that in one year wage hikes alone constituted nearly 30 per cent of the rise in hospital costs.

In addition, cost reimbursement has prompted hospitals to install more costly equipment increasing the "quality" of care and thereby their appeal to prospective patient-customers and to health care professionals. As Senator Kennedy has stated, "the system tends to encourage hospitals to add expensive new facilities and technologies." [13] Kennedy notes that in the past six years the number of laboratory tests per patient has risen by eight per cent and that the cost of these tests has risen by ten per cent annually. Ralph Nader's Health Research Group adds: "Because of their desire to attract or keep medical staff members and to enhance the reputation of their institution, hospital administrators buy high-technology equipment and facilities, such as $500,000 CAT (computerized axial tomography) scanners and open-heart surgery units which they . . . could share with other hospitals." [14]

Representative Crane observes: "The number of intensive care units increased 130 per cent between 1970 and 1975, and the nursing hours per patient day in these units increased from 14.2 to 15.5 in the same period, adding to the cost of treatment . . . By the end of this year, U.S. hospitals will have 1,400 CAT scanners, which are used to detect cancer." [15]

Harvard's Feldstein confirms these observations. "It is our method of financing health services," he says, "that primarily determines the pattern of technological change itself. Hospitals would not be buying the latest, expensive medical technology if they could not afford it. What permits them to afford

it is our mode of insuring against hospital costs." [16]

In a recent issue of the New Republic, Eliot Marshall describes a process of hospital expansion, duplication of services and fight for greater "quality" in an environment where market considerations have largely been eliminated. He describes two lavish new hospitals going up in Boston, both of which provide private rooms and both of which are dependent on Federal financing. One features individual bathrooms for each patient, and an automated monorail system for the delivery of food and other supplies.

As Marshall puts it: "Political allegiances are important in the hospital war because the normal rules of competitive enterprise do not apply . . . Boston—like other parts of the country, including Florida, Washington, D.C., and Southern California—already has more hospitals than it needs. Yet private hospitals continue to expand and multiply, often with government financing and always with the exception of revenue from government health programs. . . . " [17]

In addition to all the above, a plethora of other government programs and regulations has added to the problem of medical costs. The Hill-Burton program, which in one year constructed 40 per cent of the new beds in non-federal short-term hospitals, is largely responsible for the present surplus of 100,000 hospital beds, each of which costs $20,000 a year to maintain. Federal pension requirements have forged many hospitals into costly programs, such as the $680,000 one which the Yale-New Haven Hospital adopted. Further, even the paperwork involved in licensing and quality standards, budget review, rate and reimbursement guidelines and countless other regulations helps to drive up expenses. And, of course, hospitals face the more familiar regulations as well—OSHA, EPA, FDA and so forth. As Representative Crane has noted: "If each of the more than 7,000 hospitals in the United States added just one more employee at $10,000 as the result of federal regulations, the annual added cost would be $70 million. Obviously the number of extra personnel is much higher than that at untold expense." [18]

In sum: By accelerating demand, creating incentives for both consumers and producers to seek more expensive services, and by introducing a host of complex regulations, the government has played the central role in creating the current problem of rising hospital costs.

THE PANAMA DEAL—MUZZLING CONGRESS, THE MILITARY, AND THE CONSUMER

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. HANSEN. Mr. Speaker, the proposed Panama Canal treaties are a sellout of American interests. President Carter's "fireside chat" last week was reflective of just how far the President is willing to go in his attempts to subvert the will of the majority of the American people. His efforts were not, however, successful as is witnessed by an article in the Washington Post which stated:

> Telephone calls to the White House ran 4 to 1 against the Panama Canal treaties after President Carter's televised speech urging the public to accept them.

The President is misinformed in his claims that the treaties are in the "highest national interest of the United States." This is untrue in almost every respect.

The overwhelming majority—30 to 1—of retired flag-rank military officers who no longer fear for their jobs and can speak freely, agree that our military security stands to be dangerously and irretrievably impaired.

Contrary to the President's statement, the United States will become more involved in colonialism and imperialism, rather than less. This is because the United States is currently handling matters regarding the Panama Canal which lies in U.S. territory largely without interference in Panama's internal affairs which would not be possible if the canal is absorbed as part of that nation.

At a time when our balance of payments is running at a record deficit, it is nothing but economic suicide to further impair our trade possibilities by turning over control of a major U.S. trade route to a foreign nation.

Furthermore, every household in the eastern part of the United States which stands to benefit by new domestic oil supplies from Alaska's northern slopes will find a bigger bill for heating oil every month thanks to the tolls and tariffs of dictator Torrijos. If the treaties are ratified, the price of sugar and other groceries for every U.S. family will also increase, not to help the beleaguered farmer, but to pad the pockets of the foreign middleman in Panama.

Mr. Speaker, there still exists a grave constitutional question concerning the proposed treaties which President Carter has failed to acknowledge. I have authored a resolution which is supported by a majority of the Members of this body which would assure the House a vote in the question of disposing of Government property as provided in article IV, section 3, clause 2 of the Constitution.

A substantial majority of the House are prepared to resist any attempt by the Executive or the Senate to usurp unauthorized authority or exclude the House from exercise of its appointed responsibilities to the Nation and its citizens.

As Members of the U.S. House of Representatives we would not presume to deprive the Senate of its constitutional powers regarding treaties because of article IV considerations. Likewise we would trust that the Senate would not presume to deprive the House of its designated authority.

This resolution will, no doubt, set back the Carter administration railroading efforts in the Senate since it clearly demonstrates that Senate majority leader, ROBERT BYRD of West Virginia, and Foreign Relations Committee leaders, JOHN SPARKMAN of Alabama and FRANK CHURCH of Idaho, do not enjoy the support of their constituency in giving away the canal as witnessed by the fact that all Members of the House from those three States are cosponsors of my resolution.

Additionally, Mr. Speaker, I call to your attention a recent article which I insert for the RECORD, by Mr. Kenneth Merin of the American Law Division of the Congressional Research Service which states:

> While it is impossible to make a categorical assertion that article IV, section 3, clause 2 is either exclusive or concurrent, it appears that those powers have been recognized as exclusive for purposes of disposal of property in and around the Canal Zone to Panama.

The complete text of Mr. Merin's remarks follows:

PANAMA—THE CONSTITUTIONAL QUESTION

(By Kenneth Merin)

Almost lost amidst the debate over the political, military, historical, and economic ramifications of the proposed Panama Canal Treaties is the constitutional question of whether American territory and property may be transferred to a foreign nation under the treaty making power. Article II, Section 2, clause 2 of the Constitution authorizes the President to negotiate and enter into treaties:

"He shall have the Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; . . ."

However, Article IV, Section 3, clause 2 grants Congress the power to dispose of territory and other Federal property:

"The Congress shall have Power to dispose of and make all Rules and Regulations inspecting the Territory or other Property belonging to the United States; . . ."

Certain powers granted by the Constitution to Congress are concurrent, and may be exercised by either the Congress, or the Executive through its treaty power. If the disposal power is concurrent, then American property interests may be conveyed to foreign nations without the approval of the House of Representatives. Exclusive powers may be exercised only by the Congress. If the disposal power is found to be exclusive, then both

Houses of Congress would be required to assent through legislation to any transfer of property interests.

CONSTITUTIONAL ANALYSIS

Two powers exercised by the Congress and generally conceded to be exclusive are the appropriations and revenue law powers. Their exclusive nature is readily apparent from the language of those Constitutional provisions. Thus, "All Bills for Raising Revenue shall originate in the House of Representatives; . . .", and, "No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law; . . .". Other provisions of the Constitution state the legislative powers of Congress in a permissive form, without the mandatory language used in the grants concerning appropriations and revenue powers.

LANGUAGE PERMISSIVE

The language of Article IV, Section 3, clause 2 is permissive, "The Congress shall have the Power . . .". Despite that language, the Supreme Court has constantly ruled that Congress' power to dispose of federal territory and property is exclusive. Those decisions, however, involved situations concerning the locus of authority within the federal system.

The Court did not consider the nature of the Congressional power as a limitation on the extent of the treaty power. In fact, Article IV does seem to be devoted to the distribution of authority between the State and Federal Governments. However, good arguments supporting both the exchange and concurrent interpretations of the disposal power may be culled from the Records of the Constitutional Convention, the various State Ratifying Conventions, and the Federalist Papers.

It does not appear that there is any clear answer to be obtained from the Constitution as to the exclusive or concurrent nature of Article IV as it relates to the disposal of property to a foreign power. Therefore, it is advisable to look to the past treaty practice of the United States in order to determine if that practice reveals precedent that may be considered controlling.

TREATY PRACTICE

Are previous disposals of territory and property (without implementing legislation) valid precedent for the proposition that the House of Representatives has no role in the disposition of Federal property interests? A comprehensive review of such actions suggests that they are distinguishable from the proposed cession of property to Panama.

One group of such treaties may be categorized as "boundary treaties". Through these instruments the United States delineated its borders. However, the settlement by treaty of a disputed boundary does not provide support for the concurrent nature of the disposal power, since a treaty for the determination of a disputed line operates not as a treaty of cession, but of recognition.

Treaties that conveyed interests in land to the Indian tribes comprise the second group of treaties which have been suggested as a basis on which to find support for the concurrent nature of the disposal power. The Indian treaties do not serve to prove this point for several reasons.

First, many of those treaties did not grant the Indians a complete ownership interest in the land. Next, in those instances in which the Indian tribes received an ownership interest, the Federal Government still exercised ultimate control over the land through its power of eminent domain. That power obviously would not exist if lands were transferred to a foreign nation. Finally, Congress passed a law over a century ago that repudiated the practice of disposing of lands to the Indian tribes by treaty.

A third group of treaties does provide more of a basis on which to base a claim that treaty practice of the United States shows that the disposal power is concurrent. The prime example of this sort of treaty is the instrument returning Okinawa to Japan. That 1972 cession did convey Federal property to Japan, seemingly without congressional approval. The precedential value of this treaty is limited by the lack of congressional opposition to the transfer and by existing statutory language which may have been used as a basis under which the transfer was made.

CONCLUSION

The treaty making power, vested in the President to be exercised with the advice and consent of the Senate is extremely broad in scope. That power is limited when the Constitution confers an exclusive grant of authority on Congress.

Although there are excellent arguments in favor of the proposition that the authority to dispose of property is concurrent and may therefore be exercised under the treaty making power, those arguments are not altogether free from doubt. Supreme Court decisions have recognized the exclusive nature of Congress' Article IV powers as they relate to the Federal-State relationship.

Those rulings have never been qualified by other decisions characterizing the disposal as concurrent when used by the executive under the treaty making power. It does not appear that past treaty practice with either foreign nations or Indian tribes provides authoritative precedent establishing, with any degree of certainty, the exclusive or concurrent nature of Article IV, as that provision relates to disposal of land to a foreign sovereign.

It is clear that Congress has often asserted an exclusive right to dispose of federal territory and property. It is also apparent that both the Executive and the Senate have recognized that claim in past dispositions of property in the Canal Zone to Panama. Therefore, while it is impossible to make a categorical assertion that Article IV, Section 3, clause 2 is either exclusive or concurrent, it appears that those powers have been recognized as exclusive for purposes of disposal of property in and around the Canal Zone to Panama.

Finally, regardless of the nature of the Article IV power, the co-operation of all three branches of government is necessary for the effective implementation of American foreign policy. Although the President is the sole organ of communications with other nations, conclusion of a treaty without prior regard for congressional attitudes might adversely affect the continuing executive/congressional relationship.

PREVIOUS CESSIONS

The United States has transferred territory and property in and around the Canal Zone to the Republic of Panama on four previous occasions.

The 1932 and 1937 transfers were effected by Act of Congress. In 1943, a Joint Resolution approved an executive agreement calling for the transfer of property to Panama. Three provisions in a 1955 treaty with Panama provided for the disposition of territory and property. One of those provisions required implementing legislation. Although the other two provisions did not call for implementing legislation, a State Department official acknowledged that implementing legislation would be required for all three provisions.

Finally Mr. Speaker, I wish to call your attention to my previous remarks in the CONGRESSIONAL RECORD (Extensions of Remarks) of November 8, 1977, concerning the muzzling of the military on the Panama Canal subject.

As a continuance of my statements on this subject I include for the RECORD two recent articles, one from the January 25, 1978, issue of the Arizona Republic and one from the February 5, 1978, issue of the Washington Star. The articles speak for themselves, in one Secretary of Defense Harold Brown admitted to muzzling the Joint Chiefs on the Panama question and in the other an Army general has questioned the treaties and is preparing to retire in June. I highly recommend both articles to my colleagues in light of the seriousness of the implications of this matter. The articles follow:

JOINT CHIEFS FACE "MUZZLING" IF THEY OPPOSE CANAL PACTS

Secretary of Defense Harold Brown admitted on Tuesday that if any of the Joint Chiefs of Staff opposed ratification of the Panama Canal treaties, they would be "muzzled."

They would be free to criticize the treaties, but Brown said if they do they should be prepared to resign. However, he said all support the treaties.

Referring to some former chiefs who oppose the treaties, Brown said they are not as well informed. Some expressed opposition even before both treaties were completely written, Brown said.

Brown made the remarks in answer to a question from the audience after he had finished a speech on the treaties at a dinner sponsored by the Military Affairs Committee of the Phoenix Metropolitan Chamber of Commerce in the TowneHouse.

Brown told another questioner he doesn't think the canal is a white elephant, but doesn't want to overstate its values.

In his speech, Brown said the treaties, subject to Senate approval, are needed to keep Panama as a friend.

"We want the canal protected from external threats involving sophisticated weapons launched from outside Panama," Brown said. "Just as important, we want it protected from guerrilla or terrorist attacks or threats that could originate close by."

The Secretary emphasized that the United States "retains all rights necessary to take whatever actions may be required to ensure the canal's neutrality and security. Those rights include the right to use military force."

Basically, the United States feels it is in a better position to have a friendly nation running the canal than to have the United States operate it in an unfriendly atmosphere, Brown said.

In a press conference before the dinner, Brown praised the work of Adm. Stansfield Turner, Central Intelligence Agency director, who had been reported on the way out until President Carter expanded his authority Tuesday morning.

HE'S WORRIED—AND GOING TO RETIRE: GENERAL OFFERS CANAL PACT OPTION

(By Jeremiah O'Leary)

When the tall, distinguished-looking three-star general testified in full uniform before a Senate committee last week on his ideas for an alternative to the administration's proposed Panama Canal treaties, there were ominous vibrations throughout the Pentagon.

But Lt. Gen. Gordon Sumner, Jr., 53, chairman of the 19-nation Inter-American Defense Board, drew no flak from the White House or the Joint Chiefs of Staff for what some might regard as an expression of disagreement with the policy of his commander-in-chief.

For one thing, Sumner didn't say outright he was against the canal treaties, only that he has serious concerns about them and that

he had a proposal of his own if the Senate does not ratify the pacts.

For another, Sumner applied for retirement late last year, effective May 31, in light of his convictions about the canal treaties and therefore is somewhat out of reach of any rebuke or punitive action that might be contemplated.

"I felt I would be in a better position not to embarrass anybody if I put in my papers," Sumner said in an interview yesterday. "And I'm not thinking of becoming a martyr."

Sumner indicated he was aware of what happened to Maj. Gen. John K. Singlaub and Lt. Gen. Donn A. Starry for stepping out of line with public pronouncements.

Singlaub was removed as chief of staff for U.S. forces in Korea after publicly challenging President Carter's decision to pull U.S. troops out of Korea. Starry was rebuked for failing to clear a speech with the Pentagon in which he warned that the United States might wind up in the middle of a Sino-Soviet War.

But Sumner, in his testimony last week before the Senate Armed Services Committee, did no more than express his concern about the treaties and suggest an alernative if the treaties fail when the ratification vote is taken in about five weeks.

His proposal was that the United States would transfer control of the canal to the Inter-American Defense Board, the defensive arm of the Western Hemisphere under the Rio Treaty, to operate the waterway as an international utility. As members of the board, both Panama and the United States would participate in defense of the canal, Sumner said.

Under Sumner's proposal, the Canal Zone would remain intact under control of the board, and benefits to Panama could be increased by contracting out services now estimated to be worth $100 million a year.

Sumner was asked if he had thought he might be subject to disciplinary action for, in effect, making a proposal far different from the administration's official policy on Panama.

"What I have done is make my views known in a non-inflammatory way," Sumner said. "I have received no instructions from my government through channels since my position is international and not like that of the generals in charge of NATO and Southern Command.

"I had orders from the Joint Chiefs to testify, so I had to do that. I told them I wanted either a letter or a subpoena before I testified, and I was ordered to go ahead on the basis of a letter, not a subpoena. I would have been in violation of my orders if I had not testified.

"My position is that, as chairman of the IADB, the treaties are officially none of our business. As an Army officer, I have to support my government. As a person, I have serious worries about the treaties. Having received no instructions, I can say what I think."

Nevertheless, Sumner decided just before Christmas to retire with 35 years of service so he could speak his mind. While he carefully does not dissent from the treaties signed by Carter and Gen. Omar Torrijos, Panama's chief of state, Sumner openly declares the U.S. position in Latin America has "gone to hell and I don't want to be part of it."

Sumner is well-schooled in international affairs. He was Middle East adviser to Secretary of Defense James R. Schlesinger and before that was an aide to Secretary of Defense Melvin Laird.

He also has seen service in the Bureau of International Security Affairs, the "little State Department" of the Pentagon. Sumner is a native of Albuquerque, N.M., and joined the Army in November 1942. The was in the 2nd Division in World War II and the 1st Cavalry Division in the Korean War.

ADDITIONAL ASSISTANCE FOR SOVIET JEWISH REFUGEES NECESSARY

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1978

Mr. SOLARZ. Mr. Speaker, in his budget request, the President has asked Congress to provide a $21.2 million increase in the State Department's U.S. refugee program to be used for "increased grants to voluntary agencies—to resettle Soviet and other refugees in the United States."

Mr. Speaker, I strongly support this additional funding and commend the President for his initiative in this crucial area. This unique immigrant group, refugees from a system that did not provide them with the freedoms that all Americans enjoy, has already made a useful contribution to our society. I look forward to the day when they will enjoy full American citizenship, and I am particularly pleased to take this opportunity to welcome the large numbers of families who have settled in the Brighton Beach and Boro Park neighborhoods in my district.

I ask that my testimony on behalf of the President's request submitted to the International Relations Committee be included at this point in the RECORD, and I urge all of my colleagues to support this essential program which makes clear America's willingness to support humanitarian goals through practical measures:

TESTIMONY OF REP. STEPHEN J. SOLARZ ON U.S. REFUGEE ASSISTANCE

Mr. Chairman, I am submitting this testimony to the Subcommittee in support of the President's budget request for a $21.2 million increase in the State Department's U.S. Refugee Program to be used for "increased grants to voluntary agencies . . . to resettle Soviet and other refugees in the United States." This funding is of the utmost importance to insure the successful absorption of Soviet refugees in our communities.

Since 1972, over 20,000 Jewish refugees have emigrated from the Soviet Union to the United States to escape political and religious persecution. About half of this total have come to New York City, and a large percentage of these have settled in the Brighton Beach and Boro Park neighborhoods in my district. These new immigrants have already become productive participants in our society, and I look forward to the day when they will enojoy the benefits of American citizenship.

Mr. Chairman, I am sure you are well aware of the massive commitment the American Jewish community has made to the resettlement of these refugees. The Jewish community spends an average of $10,000 for each Russian refugee family resettled in the United States, and in 1976 alone the American Jewish community spent over $19 million to help resettle the 5,000 Soviet refugees who arrived in the United States. I am assured that this commitment will continue in the years to come.

However, the current rate of refugee immigration to the United States has increased in recent years while the overall numbers of Jews leaving the Soviet Union has also increased somewhat in the recent past. Accordingly, private funds are no longer totally sufficient to take care of the enormous resettlement costs of this unique population.

Mr. Chairman, I am personally acquainted with the variety of programs that the Jewish Federations and agencies like the New York Association for New Americans and the Hebrew Immigrant Aid Society have provided for refugees coming to the United States. These agencies have provided funding for basic maintenance, clothing, household establishment, language training, health care, job training, family counseling and other activities. Because of these programs, the resettlement of Jewish refugees has been remarkably successful. For example, a recent follow-up study of 100 families who received service from the New York Association for New Americans shows a familiar pattern: the overwhelming majority of families are able to find a niche for themselves within a year, with 88 percent saying they were satisfied with their present life in New York and their prospects for the future.

Because of the costs associated with these remarkable programs, Jewish Federations and their agencies have applied for Federal categorical assistance to supplement private community support. Indeed, I have frequently personally interceded with various Federal agencies in the attempt to gain support for these necessary programs. Unfortunately, applications for this assistance have not been generally successful, and the discouraging experiences of New York City's Jewish agencies and the New York Association for New Americans have led me to believe that a special Federal program was essential for this unique group.

For this reason, I was extremely pleased to learn that President Carter has endorsed increased assistance to Soviet Jews in the State Department's U.S. refugee program to supplement ongoing Jewish community efforts in a fruitful partnership between the private and governmental sectors. I strongly urge the Subcommittee to approve the President's request, and I commend the Administration for its notable efforts in making the request this year.

Let me add one further note. I believe it is equally important for this Subcommittee to continue its ongoing initiative in authorizing $20 million to aid in the resettlement of Soviet Jewish refugees in Israel. In the past ten years, over 120,000 refugees have emigrated from the Soviet Union to Israel, and, as you know, governmental agencies like the General Accounting Office have found that U.S. funds contributed significantly to resettling these refugees. While we consider increasing assistance for those refugees coming to the United States, we should not forget that about half of Jewish emigrants from the Soviet Union do immigrate to Israel and continue to require assistance there.

These two congressional refugee resettlement authorizations should be seen in their proper light as complementary and essential. The few millions of dollars we will spend on these programs makes clear America's willingness to support humanitarian goals through practical measures.
